President Rudder Lauds Students

As President of Texas A&M University, I would like to convey my appreciation for the efforts of the student body to encourage and promote the study of Aggie Spirit in the recent football games.

Upon hearing the tragic news of President Kennedy's death, students, faculty, and members of the staff of the university, chose to sacrifice the Thanksgiving Thanksgiving banquet as an expression of deep sorrow. This feeling permeated the entire student body, and it is an honor to present this to the President of the United States.

On November 25, the students of the university more than once paid their respects at Arlington Memorial Cemetery, regarding the student body's conduct. The faculty, staff, and I join these friends in commending you.

Research Ship Is Dedicated At Galveston

GALVESTON, - The research vessel Alaminos, the only university research ship capable of all ocean research work, was dedicated Thursday.

The ship will be operated by A&M's department of geology and meteorology in the Gulf of Mexico.

The Alaminos will play a vital role in oceanographic research programs, and the Alaminos will play a vital role in oceanographic research programs.

The Alaminos is a converted 100-foot military vessel, and is owned by the University of Texas, which is a partner in the Gulf of Mexico.

The Alaminos was converted last month and was sailed at the end of November.

Skidmore said that no one would be confined to the ship.
