Smith Recommends Tax Hikes

On Cigarettes, Chemical Goods

By DAVID MIDDLEBROOK

Battalion Staff Writer

Young people today should be, and are, a part of the political process in choosing their leaders. As a part of this process, young people should understand the political structure that exists, and be aware of the political changes, both new and old, that affect their lives. 

Young people also have a right to speak out on issues that affect them. The more informed they are on the issues at hand, the better decisions they will be able to make. In this case, young people should be aware of the tax hikes recommended by the governor.

Smith apparently shook some smoke, but he didn't give any information about the tax hikes. However, the governor has announced plans to increase state tax revenues.

"I can't help but applaud the governor's efforts to bring some order to the state's financial problems," Smith said.

The governor's tax proposals would increase state revenue by $25 million in new revenue for the current fiscal year. The proposals include an increase in cigarette and chemical goods taxes, as well as an increase in the state income tax.

The increase in cigarette taxes would be a significant step towards reducing the number of young people who smoke. However, the increase in chemical goods taxes may have less impact on the state's finances, as chemical goods are not as widely used as cigarettes.

The increase in the state income tax would be a small step towards increasing state revenue. However, it is important to note that the state income tax is a progressive tax, meaning that it affects people with higher incomes more than people with lower incomes.

"If the people support state income taxes, I believe they will be better informed on the issues at hand," Smith said.

The governor has recommended passing the proposed tax increases. However, the tax increases will not be enough to cover the state's budget deficit.

"We are facing a significant budget deficit," Smith said. "The governor's tax proposals are a necessary step in addressing this problem."
