**AGRICULTURAL BUILDING AT DALLAS FAIR.**

A. & M. May Be Requested to Send Representative to Act on Committee.

The directors of the State Fair will during the summer erect the long-contemplated permanent agricultural building, and have it ready for exhibits at the coming Fair. When the matter was under consideration last year the farmers, at the request of the State Fair management, appointed a committee with E. W. Kirkpatrick of McKinney as chairman, to meet with the State Fair management, for the purpose of agreeing on plans for the building and of selecting a site. On the invitation of Capt. W. H. Gaston, director in charge of the agricultural department, Mr. Kirkpatrick came to Dallas yesterday afternoon and had a consultation with Capt. Gaston and E. J. Kiest, chairman of the executive

board of the Fair.

Mr. Kirkpatrick said before agreeing to anything on the part of the farmers he wished to hear from the other members of the committee, and that he would invite them to meet him at the Fair Grounds some time next week.

President Moroney said last night that the management will erect a permanent agricultural building to cost between \$5,000 and \$10,000, and have it completed by the time the Fair begins this year. He said he intends to invite the A. & M. College to send a representative to a meeting of Mr. Kirkpatrick's committee and the directors of the State Fair to be held next week.

The space formerly included in the baseball park, west of Exposition Hall, which was originally set apart for the agricultural building, will in all probability be selected as the site of the building, though the wishes of the farmers will be given preference in the matter of location, as also in the plans of the structure.

**PROF. GREEN GOES TO FORT BROWN**

Mr. E. C. Green, assistant professor of horticulture, has resigned his position to accept that of pomologist in charge, of the Texas garden, the plant laboratory which the Federal government is to establish at Fort Brown near Brownsville. His appointment was effective April 1, but through the courtesy of the department of agriculture he will be allowed to remain here until June and complete the present year's work.

Mr. Green has just returned from a ten days' trip to Washington, where he was in consultation with the heads of departments that are concerned in the garden, and is enthusiastic over the work to be attempted and the large opportunity thus given him as a scientist and practical pomologist. One great field of work will be the breeding and development of species in this great State, and in this he has the enthusiastic co-operation of those connected with the department at Washington as well as ample funds for carrying on the work, \$16,000 having been set aside for this work from now to July, 1908.

The war department has turned over to the department of agriculture all the ground at present required located at Fort Brown near Brownsville, and as Mr. Green is thoroughly acquainted with this "garden spot of Texas," he is well prepared to enter at once into active operations. Sufficient buildings have also been relinquished, it being the ultimate purpose of the war department to turn over the entire fort, including the 600 acres of reservation.

Work will begin along the line of developing improved varieties of fruit and truck crops already grown in the coast country and of introducing new and untried varieties from foreign lands. Bananas, pineapples, Smyrna figs, dates and all varieties of citrus fruits will receive attention. An effort will be made to improve and domesticate the guayule plant, from which india rubber is being extracted. The Pistoschre nut, considered better than the almond, and Japanese grass will be introduced and their adaptability to our climate tested.

It will also be good news to the coast country truckers to know that Dr. Howard, head of the department of entomology, has, through Mr. Green's request, consented to detail one of the government's expert entomologists to be located at Brownsville on the garden.

His entire time will be devoted to the study of the insects that infest this particular region. It is also whispered that a plant disease expert will also be located there.

This enterprise means much to not only this coast country, but to the entire State, and to Mr. Green the State owes thanks for its launching. He has for five years labored here at the college, first as assistant and then as associate professor of horticulture, and has done valuable work. He comes from the Michigan Agricultural College, but was one year instructor in horticulture in the University of Illinois and four years chief inspector of orchards and nurseries for Illinois before coming to Texas and falling in love with this great State, making up his mind to devote the rest of his life here, where opportunity for progress and development is of such a character that it fairly takes a man of such scientific mind off his feet with the anxiety to do and accomplish things. His ability and worth are well recognized by the people among whom he goes, who will be as glad to get him as the college is sorry to lose him.—Houston Post.
