

**ARTILLERY AND SIGNAL CORPS  
PLAY 7 TO 7 TIE**

Last Sunday the Signal Corps met the Artillery on Kyle Field in the Company football game. The Artillery came on the field sure of an easy victory and boosting its ability in the line of the pigskin skill. They were sure that the Signal Corps would get one of the worst defeats they had ever seen. The Signal Corps kept quiet about their ability, but were sure that they would give the Artillery one of the hardest fights ever witnessed on that field. Enthusiasm ran high amongst the Battery "Birds" when their team scored the first touchdown and kicked the goal. The Signal Corps light line was unable to hold the heavy plunges of the Artillery for a time and they forced the pigskin over the goal line. So far scored on, but not

beaten, the Signal Corps fought hard and came back as a new team in the second half. Fish Walker of the Signal Corps added much sorrow to the Artillery's happiness by catching a forward pass for a gain of twenty yards, and then Allen making another gain within one yard of the goal line on another pass. Murray then put all his life into the play and forced the ball across the line. The goal was kicked, and the Battery's supreme moment had fallen. Although the Artillery had the Signal Corps outweighed by a number of points they showed no superiority in the knowledge of the game. The speed of Fish Walker did much in keeping the punts out of the danger zone by getting the man in his tracks. Niebuhr's line plunging did much havoc in the Signal Corps line and was the chief object in the scoring of the Artillery.

**PANHANDLE CLUB MEETS**

The Panhandle Club met Sunday afternoon in a special meeting called by the president. The meeting was well attended by club members. Important business was transacted, and plans discussed for furthering the interests of A. and M. in the Panhandle and for getting a larger number of representatives from this part of the state, in school. We realize that almost six hundred miles separate these two sections of the state and that climatic and physical conditions are widely different in the two. But we believe in A. and M. and in our section of the state, and are sure that the conditions of each can be made to harmonize with the other.

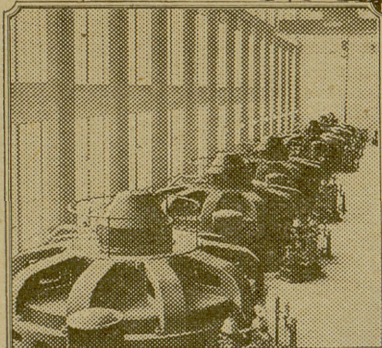

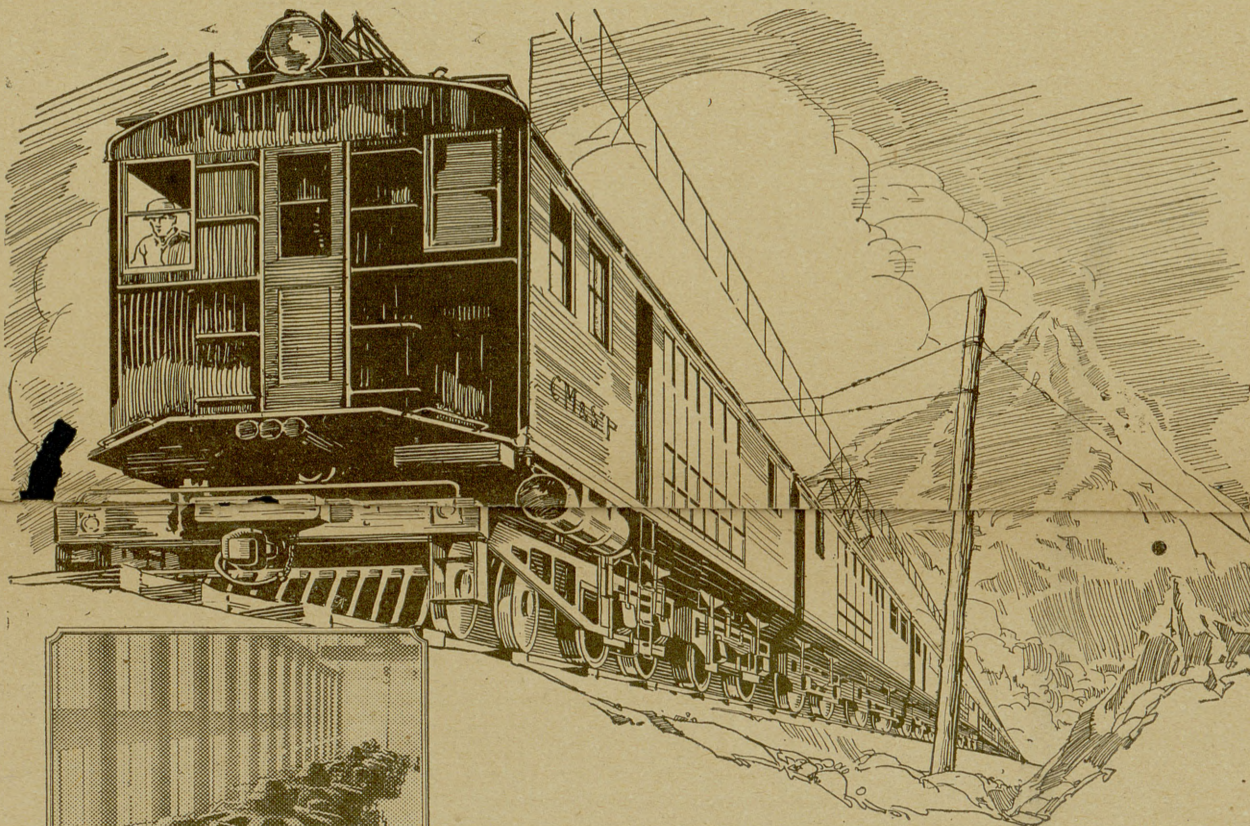

Plans for a social feature for the

Club in the near future were perfected in this meeting.

Probably it has not occurred to some people that the practice of having in the entire corps remain seated in the Mess Hall until given permission to rise causes a great deal of inconvenience. The period after dinner and supper could be better spent in a few minutes of recreation and would also give time for a little review before classes.

Company G had an old time pep meeting on the fourth floor of Goodwin Hall Monday night. Plans were discussed to help the company spirit up and also a week's end camp was suggested. G Company is looking forward to copping the highest percentage of subscriptions to the Longhorn and thus maintaining her reputation as a leader in College activities.

During these hard times we often think that music is not the only subject taught by the Dunning system.

Generator room of one of the hydro-electric plants which supply power to the C. M. & St. P.

**The Power of Electricity  
in Transportation**

ELECTRICITY has leveled out the Continental Divide. The steam locomotive, marvelous as it is after a century of development, cannot meet all of the present demands for transportation facilities. Its electric rival has proved to be far superior.

On the mountain divisions of the Chicago, Milwaukee & St. Paul Railway—the world's greatest electrification—giant electric locomotives today lift an ever increasing freight tonnage over the mile-high Rockies and also make traveling clean and comfortable. They utilize the abundant energy of distant waterfalls and then, by returning some of this power to the trolley, safely brake the trains on descending grades. And their capabilities are not impaired by excessively cold weather when the steam engine is frozen and helpless.

Electricity is the power which drives the trains of New York City's subway and elevated systems. It operates the locks and tows the ships through the Panama Canal. It propels the Navy's latest super-dreadnaught, the *New Mexico*. Electric mine locomotives have replaced the slow-moving mule and the electric automobile has also come to do an important service. Such achievements were made possible by the extensive research and manufacturing activities of the General Electric Company.

Electricity has become the universal motive power. It has contributed efficiency and comfort to every form of transportation service and in this evolution General Electric apparatus has played a large part—from mighty electric locomotives to the tiny lamp for the automobile.

**Some Advantages of  
Railroad Electrification**

- Saving the Nation's coal
- Lower maintenance costs.
- Greater reliability and fewer delays.
- Ability to haul smoothly heavier trains at higher speed.
- Operation of electric locomotives unaffected by extreme cold.
- Ability to brake trains on descending grades by returning power to the trolley.
