AGGIE WRESTLERS WIN FROM TEXAS BY SCORE OF 5-2

Get to Austin at 10 p. m. and Wrestle the Same Night; All Matches Close in First Meet of Season.

The Texas Aggies met and defeated the Texas University in a wrestling match at Austin on last Saturday night. The Farmers won five out of the seven bouts and waged a very close battle in a sixth. The matches as a whole were closely contested. The Aggies reached to Capital City five hours late which put them at some disadvantage as the meet was delayed until ten o'clock. The wrestlers had been traveling since noon and were forced to weigh in at Hearne so that they could eat their suppers. In the 115 pound class, Nash of Texas won on two falls. These were the only falls that the University registered during the contest. In the 125 pound class Gardner of A. and M. won on two decisions. Matthis of the Aggies won his bout in the 135 pound class on two straight decisions. In the 153 pound class Buckner of the Farmers won from Texas with one fall and one decision. Ashworth lost the 148 pound match on one close decision and two draws. Haney won his match in the 175 pound class on two decisions. Ramsey of the Aggies got the laurels in the unlimited class by one fall and one decision. Ramsey got his first fall in a little less than two minutes.

"POWDER PUFF" INTEREST GROWS

Contributions Coming Thousands of Miles; Feminine Issue of Battalion Appears Next Week.

The "Powder Puff" was expected to create wide interest but the indications are that it will go beyond expectations. Contributions are coming daily from Waco, Houston, Dallas, Fort Bryan, and even as far away as Chicago. The campus is a surprising source of rich material, and the close-at-hand touch by resident writers will add much to the interest of the "Powder Puff."

Many students have asked for contributions from girls in other states, every girls' school in the state has received requests, and many cadets state that every letter they write contains "Powder Puff" propaganda. With the wealth of material coming in, we are far from having enough and contributors are urged to continue their work. Any surplus of material will be used in later editions of the "Bat".

While a number of colleges are strongly represented at present, the bulk of material from C. I. A. is yet to come and judging by the past, from our sister college will much of the rich "copy" come. Students are urgently requested to include a paragraph in letters for the next few days asking for contributions for the "Powder Puff."

AG. STUDENTS FROM GRUBBS VISIT A. AND M.

The vocational agriculture class of Grubbs Vocational College visited A. and M. Thursday and remained until Saturday night doing judging work in the College Animal Husbandry Department in preparation for the Agricultural School contests to be held at the Fort Worth Fat Stock Show. The class worked with beef cattle, hogs, sheep and horses.

Prof. Dan Kiber, a graduate of A. and M. in the class of '17 was in charge of the party. Inspection of the College plant was carried on during a part of the time and the students seemed highly impressed with the College as a whole and some signified their intentions of becoming Aggies in the future. They were especially grateful to the Y. M. C. A. which entertained them while on the campus and expressed appreciation to the Departments and students who extended courtesies during their visit. The Grubbs Vocational College Club did much in the way of directing the visitors about the campus and in entertaining them while here. The Club has nearly twenty members and is doing active work to increase its size the coming year.

The students of G. V. C. who were in the party were: S. H. Springer, Frank Tracey, Marshall Carson, Jack Grant, Brooks Thompson, and Truett Billups.

TENNIS COACH ANNOUNCES THE CLUB SCHEDULE

Dual Meets Will Be Held With Each Texas Conference Team; Southwestern Conference Meet at Waco May 14th.

Much interest is being manifested in tennis and under the leadership of Mr. W. H. Thomas, prospects are very bright for a strong team this spring. Mr. James Sullivan, Business Manager of Athletics, announces the following complete schedule for the tennis team:
 March 26th, S. M. U. at Dallas.
 April 2nd, Baylor University at College Station.
 April 9th, the University at Austin.
 April 16th, Baylor University at Waco.
 April 30th, the University at College Station.
 May 7th, S. M. U. at College Station.
 May 14th, Southwest Conference meet at Waco.

This schedule includes both the doubles and singles in each meet and a better schedule could hardly been arranged, since the Farmers meet all Texas teams in the Southwestern Conference in dual meets as well as in the Conference meet.

JOHN ELDER VISITS CAMPUS IN INTEREST OF STUDENT VOLUNTEER MOVEMENT

John Elder, Student Secretary of the Volunteer Movement, arrived on the Campus Tuesday. He met with the "Y" Cabinet and also held a large number of private interviews with individual students interested in the extension work in the heathen and undeveloped countries. On Thursday evening he addressed the meeting in the "Y" Chapel along this line of work and explained it from an angle entirely new to most of the audience and one which caused much interest to be aroused.

PILAR INCLINE CITY OF BAHIA, BRAZIL

BAHIA is divided into an Upper and a Lower City. One section is on the top of a cliff—the other extends between the foot of the cliff and the waterfront.

Four Otis Electric Elevators in two large vertical towers and the Otis Incline Railway pictured here, carry the people and freight up and down the cliff. The Incline Railway is built at an angle of 40 degrees; there are two cars working alternately, each with a capacity of 20 people and 1500 pounds freight and the trip is made in 90 seconds.

Otis engineering has successfully linked these two parts of Bahia. This achievement, big as it is, is but one significant detail of the world-wide service given by Otis.

Most of the famous structures of the world are equipped with Otis Elevators.

What Is Air Pressure?

THE air is composed of molecules. They constantly bombard you from all sides. A thousand taps by a thousand knuckles will close a barn door. The taps as a whole constitute a push. So the constant bombardment of the air molecules constitutes a push. At sea-level the air molecules push against every square inch of you with a total pressure of nearly fifteen pounds.

Pressure, then, is merely a matter of bombarding molecules.

When you boil water you make its molecules fly off. The water molecules collide with the air molecules. It takes a higher temperature to boil water at sea-level than on Pike's Peak. Why? Because there are more bombarding molecules at sea-level—more pressure.

Take away all the air pressure and you have a perfect vacuum. A perfect vacuum has never been created. In the best vacuum obtainable there are still over two billion molecules of air per cubic centimeter, or about as many as there are people on the whole earth.

Heat a substance in a vacuum and you may discover properties not revealed under ordinary pressure. A new field for scientific exploration is opened.

Into this field the Research Laboratories of the General Electric Company have penetrated. Thus one of the chemists in the Research Laboratories studied the disintegration of heated metals in highly exhausted bulbs. What happened to the glowing filament of a lamp, for example? The glass blackened. But why? He discovered that the metal distilled in the vacuum depositing on the glass.

This was research in pure science—research in what may be called the chemistry and physics of high vacua. It was undertaken to answer a question. It ended in the discovery of a method of filling lamp bulbs with an inert gas under pressure so that the filament would not evaporate so readily. Thus the efficient gas-filled lamp of today grew out of a purely scientific inquiry.

So, unforeseen, practical benefits often result when research is broadly applied.
