Second Game.

The Rice Institute Owls won their third game of the season Saturday when they pulled a game out of the fire in the fourth and put it on ice in the seventh and defeated the Texas Aggies in the second game of the series by the score of 9 to 7. Rice's win Saturday gave the local collegians an even break in the series.

Dan Bloxson tossed for the Owls and pitched a nice, consistent game, though he was touched for a total of 11 hits. The Aggies rampaged about in the first, third and fourth frames, but after that were allowed but two hits.

The Owls started off slowly and not until the fifth inning did they show signs of life. In this stanza, however, the Rice nine drove Doc Graves off the mound. Five hits in the fifth, including a home run by Hale, a pair of doubles and a brace of singles did the dirty work.

Graves was replaced by Jennings, who allowed four hits and two runs, enough to win for the Owls, in his 3 2-3 innings stay on the hill. The Owls fielded well, and this was an important factor in their victory. Timely blows off Bloxson made the Owls look weak in the first innings of the game.

Chapman started things rolling for the Aggies in the first when he hit a home run with a man on base. This blow went into the right field stands. Other extra base hits were effective in helping the aFrmers to amass their total of seven.

AGGIES LOSE STELLAR ATHLETICS BY GRADUATION

(Continued from Page Eight)

son, the quarter-miler who has made a sensational finish of a mediocre beginning, of Old, the wonderful miler and cross country man, who is known throughout the Southwest as one of the best all-around track men in this section, of McCullough, the sensational pole-vaulter who has worked night and day in an effort to win a championship this year, of Wilson, the lanky discus man, of Neely, the reliable little relay man, and of Leuty, the powerful shot putter.

Coach House will have his troubles in baseball, too. Jack Forgason, the best catcher in the conference, is playing his last year in the Aggie spangles and King Gill, the steadiest pitcher on the Aggie squad before an injury ruined his pitching arm, will hurl no more.

Half of the tennis team will be swept away. Rounds and Darby will leave with the class of '24 and Coach Thomas will be forced to replace them with new material. These men have been consistent winners and Aggieland will miss their smashing drives.

Though the class of '24 is moving on, we look to you, men of '25, '26, and 27, to carry on. We have not always won during our four years stay here at A. & M. but we have fought and given our best. We look to you to bring home victory after victory. Gladden the hearts of the class of '24 by whipping Texas to a fare-you-well in '25.

SENIOR CIVIL ENGINEER GETS GOVERNMENT APPOINTMENT

E. A. Brown, prominent member of the senior class and civil engineer de-luxe, has received an appointment from Washington to look for the lost aviator, Major Martin. Mr. Brown will take up his duties at once in order to have a few clues to work with.

In an interview with a Battalion reporter Monday Mr. Brown commented as follows: "I feel that I am eminently qualified to search for Major Martin, and I know that I can sympathize with him. I have been lost so many times myself that I think I can give him some pointers at the game. The War Department must have heard of my Navasota river expedition, and the enviable record I made there. If I don't find Major Walker, I might find the North Pole."

Notice! Notice!

Seniors call and see that miniature senior class ring.

Juniors we have your 26 Jr. pin in both large and miniature sizes.

R. V.'s why not get that girl one of those white gold platinum finished diamond studded R. V. Pins?

The Magnolia Petroleum Building, Dallas, Texas

ALFRED C. BOSSOM, Architect

Drawn by Hugh Ferriss

"Sheer Height"

THE American business building represents a distinct and national architectural style when its design frankly emphasizes its sheer height and outwardly expresses the inner facts of its construction.

The tall buildings which stand as monuments throughout the country to the vision of our architects and the skill of our engineers have, in the gigantic profiles which they rear against the sky, the true American spirit of aspiration and progress toward even greater achievements.

Certainly modern invention—modern engineering skill and organization, will prove more than equal to the demands of the architecture of the future.
