

UNDER PREXY'S MOON

Fleming.

"But now this class, because its the best one I have, really don't need this lecture because they won't make these mistakes." That's Fleming's line—it's a good one too—and he's always ready to back it up with a good word and a cheerful smile. In '27, the year he came to A. and M., all the 'fish' in engineering sections were required to take a term of woodwork, and those long afternoons of planning and chiseling and sanding were almost fun if one managed to absorb some of Fleming's optimism.

D. W. Fleming began his college education at the Kansas State Teachers College in Pittsburg, Kansas, and finished up in the University of Hard Knocks. He enjoyed work in the commercial world, but he missed the comradeship that he had known in school; so in '25 he went to Sherman High as Industrial Education Prof. and assistant coach of athletics. Then two years later he came to A. and M.

Fleming makes nearly all the yell practices and he never misses a football or baseball game. He will be with us next week at T. C. U. He says "A. and M. spirit is wonderful and I'm sure glad I have it." And we're glad he is a part of the "old army:" more power to him.

Introducing Mr. J. D. Gorman, assistant professor of Animal Husbandry. Mr. Gorman is a new member of the teaching staff this year. However, he is not new in Aggieland. He was part of it in the good old days just after the war: a 'fish' in '20; a member of the junior judging team in '21; won his "T" with the A. and M. Judging team in '22; and graduated in '23. Since then Gorman has taught Vocational Agriculture in the schools of San Angelo and Del Rio. Recently he has bought and sold livestock for a large company in Beaumont. We are mighty glad he is back under Prexy's Moon again, and we hope we can make Aggieland seem as pleasant and friendly as it used to be for him.

BANKERS SUPPORT

(Continued from Page 1)

line of activity of county bankers in this field are attendance at meetings and short courses, donation of funds, and active participation in conducting specific demonstrations.

The agricultural committee now consists of the Chairman, Colonel Holland, and nine district chairmen, each chosen to represent one of the nine Extension Service Districts of the state. Five of the nine districts were represented at this conference by the following men: W. B. Lee of Spur, Bert E. Low of Abilene, J. H. Griffith of Taylor, A. E. Meyers of Richmond, and Frank Morris, Jr. of Gainesville. P. B. Doty of Beaumont, member of the Federal Reserve Bank Board was

also present and spoke.

It was voted that Texas bankers, through the organization set up at this meeting, give definite aid toward furthering three or four major lines of agricultural and home making work to be selected at district meetings to be held later this fall and winter. According to O. B. Martin, director of the Extension Service, the conference is most significant "for it marks a much more definite participation of Texas bankers in the Extension program than has been possible before. Bankers have cooperated as individuals in the past," he said, "and while this aid has been substantial, the present plan should result in still greater impetus to the improvement of Texas agriculture."

ENROLLMENT FIGURES

(Continued from Page 1)

being the largest in the history of the college. The enrollment by classes is:

Freshmen	962
Sophomores	745
Juniors	462
Seniors	393
Post Graduates	57
Special Students	8

Many more transfers are to be found among the new students this year than usual and though they are proud wearers of the white stripe, it will be remembered that their presence has swelled the ranks of other classes.

As has been usual in the past, the School of Engineering is the largest in the College. The new Petroleum

Production course in that school, which drew 66 students, half freshmen and half sophomores, was a big drawing card and promises to become one of the leading courses in the college. The enrollment by schools follows:

School of Engineering.....	1582
School of Agriculture	680
School of Arts and Sciences	291
School of Coca. Edu.	103
School of Vet. Med.	21

Windrow Construction Company is pouring the last section of the Aggie stadium. It won't be long now.

There are just six players on the T. C. U. line who are in their third year of varsity competition. All graduate this year.

The telephone grows air-minded

THE BELL SYSTEM has made many successful experiments in two-way plane to ground telephone communication. This new development illustrates how it marches a pace ahead of the new civilization. It is now growing faster than ever before.

New telephone buildings are going up this year in 200 cities. Many central offices are changing from manual to dial tele-

phones. A vast program of cable construction is going on.

This is the period of growth, improvement and adventure in the telephone industry. Expenditures this year for new plant and service improvements will total more than five hundred and fifty million dollars—one and one half times the entire cost of the Panama Canal.
