AGGIE FISH

line and marched right down the field for the winning touchdown without losing the ball—that looks like power for the 1931 team. Woodland carried the oval over, but the kick was bad. Brownsville came back and threatened once just before the half ended, but never after that got inside the Aggie 30-yard line. The crowd of 7,000 people who witnessed the struggle saw a beautiful game from beginning to end.

A forward wall that refused to give an inch was the outstanding light for the fish. Coach Hig's charges are fast developing into a powerful outfit. He has a wealth of fast, elusive backfield material and should turn out some good men for next year's varsity.

Allen Feud Renewed.

Friday the Freshmen and Allen Academy renew hostilities again. Last year Blinn was played and the annual game with Wilson's charges omitted. The Allen crew have a mighty club this year and are due to give the Fish considerable trouble. This game will give the fans a chance to see the material that will be on hand next year and also a good game will result at any time these two elevens meet. Watch this Fish Malone at end, Walker in the line, and Woodland and Aston in the backfield. These men are not by any means the best on the fish squad, but are due to deal plenty misery to any opponent.

AGGIE HARRIERS

the course in 19:20 minutes.

Last Saturday Rice met the Texas Harriers on the Steer course and Willis of the Owl team ran it in 19:20 in the mud. Texas won this meet.

It is interesting to note that the Aggie team met Texas last year just before the Conference meet on the Austin course, and this year will meet the Owls on the Rice course just before the Conference meet which will be held in Houston. Aggieland is due for the meet next year if T. C. U. decides to let their turn go. The Frogs are entering a team this year for the first time.

Cornell University has applied for a patent for a new and inexpensive process of making milk sugar, a process discovered by Dr. Paul Sharp, professor of dairy chemistry at the University. The process is said to yield a milk sugar not formerly used on the market, which may be substituted for ordinary table sugar.
