
 ★ SLANTS AT ★
 ★ THE CROWD ★
 ★*****

And now, boys and girls of the radio audiences, we are delighted to announce that we have with us this evening none other than that versatile entertainer, Mr. Sax A. Peal, who will present for your amusement just a begging song. It is the tearful tale of a little girl who didn't like Sophomores and because of this fact, the young man's heart was crushed and the story had no indication of a happy ending. We'll now turn the microphone over to Mr. Peal.

"Good-evening, folks, here I am back again to bore you for awhile. Pardon—I mean, to entertain you. I'll dispense with all unnecessary introductions and proceed at once with my story. It all began during the 1928-29 session of the Texas A. and M. College when knighthood was in flower and happiness (supposedly) reigned supreme. A well-meaning sophomore with no other thought in his cranium than to enjoy himself took the privilege of writing one of Eve's daughters, whom he had never seen, on the advice of an Aggie brother. So far, so well. But complications arose and in his first letter he gave the young lady the false impression that he was just a young freshman at this institution of attempted higher learning. In answer to his letter, Miss Eve sent a very promising reply which had all the indications of a happy ending.

Destiny, however, took a part in the affair at this time, and poor Cupid was given a nose-dive into a tall, tall tree. Assuring himself that he was not doing right by Nell in deceiving the lassie and feeling sure that if he only explained to her that he was a high-rating second year private instead of a first year one, he would be forgiven of his sin, he wrote to her and explained things in detail. It was a mistake of the heart as well as the brain.

Gentlemen, that well deserving young man (though an egotist at heart) never received any indication of an answer to his last epistle. Like Mutt and Jeff, I agree with him that it is a "crooel, crooel world" and that the best thing to do in a case like this is to either find someone who will tolerate us or go jump in a cold lake and die like a true martyr of unrequited love. And so, boys and girls of radioland, and all of you other people listening out there, our story comes to a close. (Applause) The moral of it all is this: never deceive a woman for, in the first place it can't be done; in the second place you will be found guilty of your crime if you do and in the third place it is impossible to do it in the first place. Good-night and pleasant dreams.

* * *

I've heard of "Dream Daddies," "Hot Papas," and "Sweet Daddies" but never, in all my life, of "Powdered Sugar Daddies." That's the proverbial last word in having a superfluous amount of sex appeal. But according to a young lady from the fair city of Bryan, Mr. John Neal of the notorious "Sons of Rest," is a satisfying "powdered sugar daddy." Just what this means will

cause you, perhaps, to wonder the remainder of your mortal days on Mother Earth. If you want the correct definition you'd better ask John. He'll tell you that he is a red-hot, hard-to-get, sure enough powdered sugar daddy. And no stammering.

STUDENTS OF MATH

(Continued from Page 1)

are not repeating courses 107, 102, 103, or 104 in mathematics. Those eligible for the sophomore prizes are students classed as sophomores who are not repeating Mathematics 203 or 204.

By preliminary one-hour tests in each section in mathematics 102, covering courses 101 and 102, and in each section of analytics, covering courses 103 and 104, freshmen

will be selected to compete in the final competitive examination. The two students making the highest combined grades in these two preliminary contests will represent their sections in the final three-hour examination. The analytics sections are to be used as the basis of determining a student's section. The final competitive examination to determine the winners of first and second freshman prizes is to be based upon Mathematics 101, 102, 103, and 104.

Preliminary tests for sophomores will be held in a similar manner. First one-hour examinations will be given on differentiation and its application; second one-hour tests will be given on integration and its application. The two students making the highest combined grades in these two tests will represent their sections in the final three-hour com-

petitive examination, which will be based on Mathematics 203 and 204.

SOME ONE CARES.

When you meet some disappointment,
 An' yer feelin' kind of blue,
 When yer plans have all got side-tracked

Or some friend has proved untrue;
 When yer toilin', prayin', strugglin',
 At the bottom of the stairs,
 It's just like a panacea
 Just to know that someone cares.

Some one who can appreciate
 One's efforts when he tries,
 Some one who seems to understand
 An' sorta sympathize;
 Some one who, when he's far away,
 Still wonders how he fares,
 Some one who never can forget,
 Some one who really cares.

Winning the war against weather

In the telephone business, research man, manufacturing engineer and construction supervisor are carrying on a successful war against the unruly elements, enemies to service.

Cable, for example, housing many circuits and covered with protective coatings

of proved strength, withstands storms which might seriously threaten open wire lines.

Thus in the Bell System growth is intensive as well as extensive, improving present facilities as well as adding new ones. And there is no end to all this development.

BELL SYSTEM

A nation-wide system of inter-connecting telephones

"OUR PIONEERING WORK HAS JUST BEGUN"
