

valley since the completion of these conservation measures which consisted of five large dams and reservoirs. Each slide was explained by Professor T. A. Munson. Bill Deane, the club president, has planned an interesting meeting for Thursday, January 30th at which time Lieutenant Seybold will speak on Military Engineering.

**JUNIOR STOCK JUDGES
REPORT FOR TRYOUTS**

(Continued from Page 1)

will enter the Southwestern Exposition and Fat Stock show at Fort Worth. Five members and one alternate will constitute each team and the team will be coached by Professor A. K. Mackey. The contests will be held in judging beef cattle, muttons and fine-wooled sheep,

horses and hogs. Last year's contest was won by Oklahoma, with the Aggies close behind in second place. Professor Mackey is conducting classes daily with the hope that constant and hard work will bring home the "bacon," or rather, will win the contests in which the "bacon" is judged.

**DEBATERS TRAIN FOR
CONTEST IN SPRING**

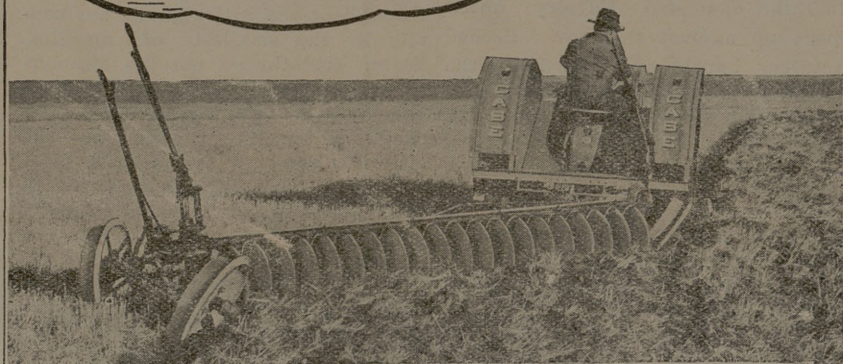

(Continued from Page 1)

Competition among the debaters themselves will be held every Thursday night instead of bi-weekly as was the previous practice. The question for tomorrow night will be: "Resolved, that the nations should adopt a plan of complete disarmament, except for such forces as are

needed for police protection." W. A. Porter and W. O. Alexander will take the affirmative, while W. R. Godsey and E. H. Johnson will uphold the negative. The debate will be held in the "Y" parlor at 7:30 and though it is for practice, it should prove interesting and instructive. A complete schedule for intercollegiate debates will be announced soon.

THIS IS NUMBER FOUR OF A SERIES OF ADVERTISEMENTS TO COLLEGE MEN

**WHAT A
FARM TO FARM
SURVEY WOULD
SHOW**

The illustration shows the New Model "L" Case Tractor pulling a Great Plains Disk Plow

ONE of the primary objects of agricultural education is to discover and point out the way to greater prosperity for the farmer.

If you were to make a survey of every farm in your state, you would find many factors responsible for the gain of some farmers and the loss of others. The one constant factor would be this—that the most successful farmers invariably use highly efficient machines for all principal operations.

You would prove conclusively that efficient machines are essential to successful farming.

You would also prove that machines possessing these definite qualities—adaptability to the work, large capacity at low operating cost, dependability, and durability—are the most profitable machines to own.

For eighty-seven years, Case has specialized in developing, designing and manufacturing farm machines of this class. This Company has contributed to agriculture many of the most efficient machines now available to the progressive and alert farmer.
