here. It is hoped that this statement will succeed in explaining the hitherto unexplained disposition of the funds collected from each student each term under the heading of Matriculation Fee and Maintenance Fee.

A total sum of \$96.00 is paid to the college by each student per term for maintenance. Of this sum \$89.25 goes to the mess hall for food and the remaining \$6.75 maintains the laundry service. This sum provides a daily ration allowance of \$0.71 per student.

The college catalogue describes the Matriculation Fee as covering the cost of certain incidental supplies and allowing the students the use of the library. The laws of Texas provide for a maximum Matriculation Fee for state-supported educational institutions of \$30.00 for the entire year, but so far this school has managed to stay within a \$25,00 maximum. The State Legislature in making appropriations expects the Matriculation Fee to cover numerous items for which it makes no appropriations. These items in connection with this college have been itemized and listed as follows: .

ESTIMATED INCOME:	Sec. 1.4
First Term, 2000 students @ \$15:00	\$30,000.00
Second Term, 1725 old students @ \$10.00	
Second Term, 50 new students @ \$15.00	
Total	\$48,000.00
ESTIMATED EXPENDITURES:	
For salaries for Instructional staff and Library staff, not provided for by State Appropriations. For Departmental Maintenance not provided for by State Appropriations:	\$19,120.00
President's Office	\$ 4,500.00
Registrar's Office	
Commandant's Office	1,800 00
Fiscal Office	4,600.00
Library	1,800.00
Total	\$17,950.00
For Miscellaneous Items not provide for by State Appropriations:	
Classroom Supplies	\$ 2,750.00

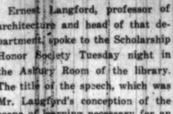

bers would be appointed by the President with the approval of the Legislature, with life tenure of office for six members, and six year terms for the remaining three, one of these terms to expire every two years. These men would be nationally recognized as leaders in the field of education and would be equipped to assume the responsibilities of such vitally important positions. Each state would be divided into dis-tricts with a local governing board in charge of each educational dis-trict. This local board would be directly remonsible to the method. erning board in Washington. Other administrative details could be easily worked out, and it is believed that the above plan is entirely feasible.

In the matter of revenue, certain taxes would be set aside for the of education only. An estimate would be made by competent experts of the funds needed for the maintenance of national education. and this amount could be set aside by an Act of Congress, not to be

touched for any other purpose. A yearly budget would be comprised and maintained by the governing board, providing for no surplus remaining at the end of the year.

This plan affords national handling of educational affairs by men equipped specifically for this purpose. If educational evils of the present day are to be eliminated, place this stupendous task in the hands of the educationalist!

Langford Addresses

educated man, was "The Back-ground ito Intelligent Thinking." The speech was not prepared with-out a great deal of thought and reout a great deal of thought and re-search as Mr. Langford spent six months compiling it a few years ago for irresentation before the same group, although at that time circumstances prevented his delivering it.

In his presentation of a work-able philosophy for an intelligent man. Mr. Langford included the following divisions: perfection of a mathematical synthesis of physical nature as by Einstein and his con-temporaries; discoveries in astrotemporaries; discoveries in astro-nomy, a discussion of the spectro-scope, the interferometer, and cel-estial photography; discoveries in geology, man's place in the scheme of things from the geologist's view-point; discoveries in physics; the era of invention, on this point Mr. Langford said, "What to do with his spare time has come to be a

TOTAL ESTIMATED EXPENDITURES \$48,000		\$10,930.00

From the above statement it will be seen that the Matriculation Fee does not go for classroom supplies alone, as is the prevalent idea on this campus, but it is expended for numerous essential purposes.

EDUCATION

A vital problem confronting the American public of today is education. Revenue for the promulgation of the educational policies of this country is lacking, and on all sides the hue and cry for additional taxation is being raised. Rural schools are being run for only four and six month terms; the teachers in the large city primary schools and high schools sometimes go for months without pay; the instructors in the state-supported institutions of higher education are often being paid/in script with a resulting high interest rate they must pay if the cash value is to be realized at once. These conditions might easily be called the "Crime of the early 1930's" just as the abolition of the free coinage of silver has often been referred to as the "Crime of 1873."

To what causes can this existing situation be attributed? There are two main causes which may be listed in the order of their impor-tance as follows: the interference of politics, and religious restrictions. If education was placed above the reach of politicians, the resulting, conditions would provide all that is now lacking in the educational policy that this country is trying to maintain. The question is raised: Where does the church enter in? Public schools cannot compete with church schools in the way of equipment and salaries for the faculty and administrative officers, as the sectarian schools charge a tuition fee that provides an ample fund for these items. Yet these sectarian institutions are complaining of the lack of a tuition fee in the management of state-supported institutions, and even now it is rumored that plans are under way in the Legislature of this State to legalize the extortion of such a fee from students in the future.

A solution presents itself: Place education in the hands of the educationalist! Bar the politicians and religious fanatics and funda mentalists from meddling in a sphere outside their natural scope and then the bane of education will be lifted. How is this to be done? The answer unfolds in a clear, concise, and logical form.

Education has attained such gigantic proportions that it should be dealt with as a national problem. This problem can be handled by the national government by increasing the number of administrative offices from three to four, namely: executive, legislative, judicial, and educational

This proposed educational branch would operate in much the same fashion as the judiciary branch operates today. A board of nine mem-

"Chesterfields Satisfy"

WHEN smokers keep buying the same cigarette day after day ... it's a pretty good sign that they're getting what they want . . . mildness, better taste - a smoke that's always the same.

So we're going right on making Chesterfields just as we always have ... selecting choice, ripe tobaccos ... ageing them ... blending and cross-blending them ... making them into cigarettes in the most scientific ways that are known.

As long as we do these things we know that smokers will continue to say,"They Satisfy". For that's what people are saying about Chesterfields.

If you smoke, why not find out about them? A package or two will tell you the whole story.
