

## We Need It . . . .

Tradition or common sense? Thursday night at College Night, there was a crowd of some 7,500 people present. This crowd extended nearly to the Assembly Hall on one side and out past the bugle stand on the other. All of this mounts up to the cold fact that the YMCA steps are no longer large enough to provide adequate accommodations for the thousands who will attend yell practice this year.

If yell practice is to survive, a new location will have to be provided. That statement was proven Thursday night.

Texas A. & M. changes and expands from year to year. As a natural result of this expansion, the school and its facilities must expand.

A suggestion was made recently by Chief yell leader Buster Keeton that would offer a solution to the situation. Buster would have the Senior class note to the corps a permanent structure which could be used for all corps meetings as

well as yell practice. This structure would be located on the east side of Guion Hall, affording a convenient spot for both sides of the campus. It would be well lighted in addition to the use of the public address system in Guion Hall.

This new site must be the Aggies' own. Above all, it must retain all of the tradition acquired by the Y steps during its many years of service.

This new movement deserves thought and participation upon the part of every Aggie. Think it over. Tradition or common sense?

United States farmers have enough grains in 1940, to produce 78 pounds of pork for every one of the 132,000,000 people in the nation or 14 pounds more than each person at in 1939.

Farm purchases of food in the United States are estimated to amount to over \$1,100,000,000 per year.

## Chem. Department—

(Continued from page 1)

Dr. D. W. Harris, who did research work this summer on how to separate cottonseed oil from the seed extraction rather than by the old method of pressing, will be included in the new department. Dr. Lindsay, Dr. Harris, and Professor Bishop will teach the chemical engineering courses during the 1940-41 session.

Stoichiometry, unit operations, process chemistry, designs, and seminar work will be offered this term. These courses will cover all phases of the application of physics, chemistry, and mathematics to industrial processes. Complete laboratories are being outfitted; and these include a machine shop, a unit operations laboratory, crushing machine laboratory, and stock rooms and tables. A library is being established, and classrooms will probably be shared with the petroleum engineers.

The A. & M. Department of Chemical Engineering has in the past been adjudged to be on par with the best in the country as far as under-graduate work is concerned and will continue to be improved as funds are made available.

## Ashton—

(Continued from page 1)

the position he now holds. He has been granted a year's leave of absence to accept the Nicaraguan professorship and is expected to return to the college in September, 1941.

During World War I, he served for over four years with the Allied military forces overseas and received decorations from Great Britain and France for his work as a military interpreter during the war and on the Rhine following the Armistice. He also has received the Order of the Crown of Belgium for his writings on Belgian agriculture and Merite Agricole (France) for similar writings in that country.

He has been listed in "Who's Who in America" since 1922.

## Razorbaks—

(Continued from page 2)

through graduation, and with Eakin went the immediate hopes of the Ozark school.

The backfield may not have the right combination for much success this year, but the end positions are strong and talented. Regulars for the end jobs are Co-Capt. Howard Hickey, 6 foot, 2 inch, 195 pound senior from Clarksville, Arkansas, and Maurice Britt, 6 foot 3 inch, 195 pound senior from Lonoke. Rated close behind is the tallest man on the club, 216-pound John Freiberger, from Point, Texas, who towers at a height of 6 feet 8 inches. His running mate is O'Neil Adams, 6 foot 3 inch, 195 pound Junior from Beebe, Arkansas. Even this imposing list does not finish Thomsen's wingmen, for according to him, the best pass-receiver in his coaching career, including the famous Jim Bente, is on the club in the person of Bill Southerland, a 6 foot 3 inch, 180 pound Senior from Texarkana.

Tackle spots are well-filled by Jan Carter and Jeff Coates, a pair of linemen that will be back at work with their rugged play. Carter stands 6 feet 4 inches and weighs 225 pounds. Coates is an even 6 feet and tips the scales at 204 pounds.

Filling out the rest of the line will be Co-Captain A. J. Yates, 187 pound senior from Bentonville, who is expected to hold down the left guard berth, and he is teaming with Milton Simington at right guard, a 225 pound senior who is headed for real recognition in the coming gridiron clashes. Daryl Cato, a 195 pound junior from Lonoke who is much the better for his experience last year, will take over the center position in fine shape.

Arkansas is a club that is seemingly building for next year, and although they should be strong on the defense, their offense is, according to Thomsen, woefully weak. The football fans from the Ozark state are counting on a bunch of sophomores to come through with some sort of an attack to counteract the power of their mighty opponents for 1940.

With 1940 feed supplies, and with pastures improved by conservation farming, farmers could provide every person in the nation with 45 quarts more milk and cream and 81 pounds more cheese, butter, ice cream and other manufactured dairy products than each person at in 1939.

## Industrial Eng.—

(Continued from page 1)

two and one-half years and received the degree of Master of Business Administration in 1936. Following graduation he entered the service of the Edward G. Budd Manufacturing Company as head of time study engineering in the stainless steel division where 1500 workmen were employed. He was in charge of setting piece-work rates and was accountable for the earning of the men and for all labor costs in construction, of zephyr trains, naval construction, motor freight trailer units, and other miscellaneous heavy manufactured articles of the stainless steel.

While attending school here Neff received his training in the Cavalry Reserves.

The courses that are offered in industrial engineering are new courses or courses which have been revised to 1940.

A new method of instruction will be introduced to some extent in all courses. This will require the student to write reports on his own analysis of actual situations taken from industry.

Assisting Neff as instructor will be K. M. Loughmiller, who received a B. S. degree in Mechanical Engineering from Purdue in 1935 and has been an instructor at A. & M. since 1939. Loughmiller has spent a number of years in industrial engineering in various mass production industries.

The industrial engineering department has taken over the instruction of two courses which have been previously in the mechanical engineering department. The basic course is offered both semesters, and is a required course for all mechanical engineering students. The other course is training in Time Study engineering. It is a highly specialized course in determining production allowances by use of the stop watch.

Among the courses being offered for the first time is Industrial Case Analysis which is intended for engineering administration students or those taking fifth year curricula. The course covers the analysis of industrial situations.

A practice course which takes the student through the routine work of an industrial engineer in lining up for the manufacturing of any industrial article is being offered for those who desire practical work.

A course covering Accounting, Statistics, Finance, and Marketing is being offered for fifth year students and for industrial students and for industrial engineers who have been practicing and find themselves short of essential training. All of the fifth year work and part of the fourth year work will consist of a study of analyses of actual situations taken from industry. In addition to attacking management problems taken from actual industrial conditions a student will be required to decide what objective he seeks to attain in industry, and will be started upon a course designed to reach his objective.

## Town Hall Reserve Seat Tickets To Be On Sale Tuesday

A most unusual occurrence, and certainly one that speaks well for Town Hall, was the fact that during registration Wednesday and Thursday upperclassmen bought many more Town Hall tickets than did the freshmen. This fact speaks well for the outstanding Town Hall program this year and indicates that the senior class's determination to support Town Hall to the fullest extent has had decided results.

Just before the paper went to press Friday night, it was announced by Paul Haines, student manager, that Friday's ticket sales had already put total sales far above last year's record. For those who did not get a chance to secure tickets during registration, it was

## Baggett Announces Deadlines For Class Pictures In Longhorn

Rapidly organizing his section of the Longhorn devoted to the class pictures, Ele Baggett announces the deadlines for these pictures to be made. They are to be posed for in number one uniform at the Aggeland Studio on or before the dates listed:

Infantry seniors from September 30 through October 5.

Field Artillery seniors from October 7 through October 12. Non-military seniors are also included in this group.

Coast Artillery, Signal Corps and Chemical Warfare seniors from October 14 through October 19.

Engineer and Cavalry seniors from October 21 through October 26.

Infantry juniors from November 1 through November 4.

Field Artillery juniors November 5, 6, 7.

Coast Artillery, Signal Corps and Chemical Warfare juniors November 8 through November 11. Engineer and Cavalry juniors November 12, 13, 14.

Infantry sophomores from November 15 through November 17. Field Artillery Sophomores November 19, 20, 21.

Coast Artillery, Signal Corps and Chemical Warfare sophomores November 22, 23, 25.

Engineer and Cavalry sophomores November 26, 27, 28.

Infantry freshmen November 29 and 30 and December 2.

Field Artillery freshmen December 3, 4, 5.

Coast Artillery, Signal Corps, and Chemical Warfare freshmen December 6, 7, 8.

Engineer and Cavalry freshmen December 10, 11, 12.

announced that Town Hall assistants would sell them in the dormitories Monday night.

In regard to the many inquiries concerning reserved seats for the Town Hall programs, it was learned that reserve seat tickets would go on sale Tuesday morning at the Y. M. C. A. and at the same time in Bryan they will be at Waldrop's.

With the Marine Band performance only a short time off there have been many inquiries as to the type of program that they will offer. In a recent letter it was stated by the Marine Band director, Capt.

Wm. F. Santelman, that a special program had been arranged primarily for A. & M., and that the type of music that all would enjoy will predominate.

The younger a pig goes to market—up to certain limits, of course—the more profit he is likely to send home.

Cooperative-minded farmers in Dallas County, Iowa, recently built a two-story frozen food locker plant so that the second floor could be used for community meetings and socials.
