Appointment of White as New Forest Service Head Meets With Approval

According to messages received at forestry headquarters here today, the appointment by the A&M College board of directors of W. E. White, Lufkin, as director of the Texas Forest Service has met with widespread approval of timberland owners, farmers and forestry industrial leaders in the state. He succeeds E. O. Siecke, who has retired after 24 years as director.
John S. Redditt of Lufkin, former state senator said that the board of directors made a "very fine and excellent" choice in appointing White to direct the state forestry activities. "I know of no other man who could have been chosen to fulfill responsibilities of this job. I have known Mr. White for many years and he has made a splendid reputation in handling the forest fire protection work in East Texas. I am sure that we can look forward to continued progress of the Texas Forest Service under his leadership."

White previously directed the forest fire protection work in 31 counties covering an area of more than 11 million acres, and last year turned in the best record in eleven southern states for fewest fires and smallest area burned. He has directed a field force of more than 200 fire fighters and has worked closely with farmers and timberland owners.

E. L. Kurth, Lufkin, president of Southland Paper Mills, Inc., said that White was "most worthy successor to Mr. Siecke. He is qualified in every way to follow through with success the policies now in force."
Sam C. Selars, Keltys, president Texas Mill Managers Association, said that he was sorry to hear of Mr. Siecke's retirement, but that "we are glad that Mr. White was appointed to his successor because he is fully capable and deserves this recognition."

E. J. Downey, Houston, wood procurement manager of Champion Paper and Fibre Company said the board of directors used "judicious wisdom." "We think a lot of the Texas Forest Service and I am glad to see that the work will be continued under such a good leader as Mr. White."
J. P. Martin, Nacagdoches county farmer and member of the state soil conservation board said he was glad to see such a "capable and well-liked man take over the forestry work." White will be in charge of educating more than 120,000 East Texas farmers on forest care and protection.
Hoxie H. Thompson, Houston, president of the Texas Forestry Association, of which White is a director, expressed appreciation of the board's action. He said that "the state forestry work will be in good hands."

Paul T. Sanderson, Trinity, president of the Texas Longleaf Lumber Company and vice-president of the Southern Pine Association commended White's appointment. "He is the best experienced man to handle this very important position," he said. "In fact, I feel that he is the only one that could be considered."

White is a senior member of the Society of American Foresters, a national organization of technically trained forestry experts, and formerly served as section chairman of the Gulf States section. He was congratulated by B. Koontz of Jefferson, present section chairman, who expressed his complete satisfaction and said that the society recognizes him as an outstanding forester in the development of state forestry work. "I know that he has the complete confidence of all the members of this technical forestry organization," Koontz said.

Lack of New Stoves Means Care Must Be Taken to Preserve

Because the purchase of some types of new stoves is now limited by government order, Marvin Hall, State Fire Insurance Commissioner, declares it is more important than ever to carefully check stoves and heating equipment before they are placed in use for the winter.
"Our used stoves can't be replaced," he said, "and this will require us to get the best service possible out of what we have until the war is over. Fire losses in other years—times when used stoves could be replaced with new ones—have always shown an increase at this season."

"This can be charged to carelessness and hurried installation of stoves at the beginning of fall. It is more important than ever for us to see that our heating equipment is in good condition and will not cause a destructive fire."
To more strongly fortify the "home-front" against fire, Hall recommended:
Carefully check chimneys and flues for holes through which sparks may escape, especially in the attic and at the roof line; clean thoroughly to prevent flue fires. Examine stoves and old pipes for rust holes and loose joints.
Set stoves and furnaces a safe distance from combustible walls and ceilings or protect with shields of asbestos, metal over asbestos or metal separated from combustible surface by an air space.
If metal pipes pass through walls or ceilings protect the woodwork with a ventilated thimble. Use metal mats under stoves.
Ash cans should be of metal and kept covered. Do not place cans near wooden fences, walls or other combustible materials.
Place screens in front of all open fires. Be sure that window curtains and other combustible household furnishings will not become ignited by keeping them a safe distance from the stove or fire.
Before connecting gas heaters see that all burners are clean and adjusted for the correct mixture of air and gas. Avoid the use of rubber hose connections; use metal connections instead.

'MURAL SPORTS'
(Continued from page 3)
ball and basketball are two sports which are expected to aid in increasing the participation figure since these activities have proven to be extremely popular in the past.
This year much of the work of officiating various sports will be done by a number of intramural NYA employees. These men have received instructions in football and basketball officiating and have been given a review of the rules. They are expected to turn in decisions with much ability.

Abilene Club to Meet After Yell Practice
Important plans for the future will be discussed at the first meeting of the Abilene Club tonight right after yell practice, according to Dub Sibley, club president.
The meeting will be held in Room 107, Academic building, states Sibley. All Aggies from Abilene or Taylor county are urged to be present to transact important business.

Dr Longenecker To Address ACS Group

Dr. H. E. Longenecker of the University of Pittsburgh, Penn., will speak to the Texas A&M Section of the American Chemical Society in the Chemistry Lecture Room on Tuesday, Oct. 13, at 8:30 o'clock on the subject of the Formation of Animal Body Fats, Dr. J. D. Lindsey, chairman of the local section, announced Monday.
Deposition of body fat provides the animal with a concentrated energy reserve. During many years considerable interest has been maintained in studies of animal reserve fat, primarily related to (a) its composition and structure, and (b) certain factors which control or affect its nature.

Until recently it was commonly thought that fat tissue was laid down only during periods of excess food consumption. Now, however, it is clearly recognized that there is a continual replacement of the constituent fatty acids. The source of the fatty acids may be the food fat or the ingested carbohydrates and proteins.
The character of the animal fat, expressed in terms of the constituent fatty acids, is determined by the nature of the foodstuffs from which it is formed. The glycerides which are formed, however, follow a general pattern which indicates a random distribution of all available fatty acids. A maximum formation of mixed triglycerides occurs.

Conversion of non-fatty foods into animal fat requires certain vitamins of the B complex. In the absence of these vitamins, fat synthesis is entirely restricted. With an improper balance of the same vitamins, an abnormal deposition of fat occurs in the liver of experimental animals.
Smither Receiving Naval Air Training
Irvine F. Smither, who attended A. & M., was recently appointed a Naval Aviation Cadet, and was transferred to the Naval Air Station in Pensacola, Fla., for flight training, according to an announcement from the public relations office of that station.
Smither, who lives in Shreveport, La., received six years' training in the U. S. Army Reserve Officers Training Corps. He took his elimination flight training at the Naval Reserve Aviation Base in New Orleans, La., which he successfully completed October 1.
Upon completion of the intensive course at the "Annapolis of the Air," he will receive the designation of Naval Aviator with a commission as Ensign in the Naval Reserve or as Second Lieutenant in the Marine Corps Reserve, at which time he will be assigned to active duty.

Winter Colds May Be Prevented By Proper Protection

With the advent of fall, and colds becoming prevalent, Dr. George W. Cox, State Health Officer, makes the following suggestions as to ways by which these seasonal illnesses may be warded off, or at least may be gotten under control before they do any serious damage.
Keep as fit as possible. Dress according to the weather, indoors and out-of-doors. Put on a heavier suit when a cold snap comes. Use a raincoat, overshoes and umbrella on rainy days. Change as quickly as possible, into dry clothes if you are caught in a drenching down-pour.
With a shortage of fuel facing all of us, our houses are likely to be chillier than usual during the early fall months. Look up your supply of sweaters and have them ready for use on these first chilly days. Get out some other heavy clothing and warm bed coverings at the same time.
Eat plenty of simple nourishing food. Have your meals at regular hours. Drink plenty of water. Take some exercise out of doors, every day. Get the necessary amount of rest.
If you are caught in the clutches of a cold, unawares, don't treat it lightly. It may turn into something very serious, if neglected. The quickest way to get over a cold, or to bring it under control, is to go to bed, keep warm, eat lightly, drink plenty of water and fruit juices, and at the slightest sign of fever, send for your doctor and stay in bed until he feels that it is safe for you to get up and get out again.
And remember, colds are very contagious. Cold-producing germs are scattered far and wide whenever the victim of a cold coughs or sneezes. They are likely to be found on anything the victim touches. If you are the victim, keep your germs to yourself. Have your own towels and wash cloths, your own drinking glass and dishes—and be sure that they are adequately sterilized with hot—very hot—water and soap after you have used them. Keep well supplied with paper handkerchiefs; dispose of them promptly after they have been used.

W. E. WHITE
(Continued from Page 1)
divisions of A. & M. and gave Siecke the title of director.
To comply with the original state law which authorized a program to conserve the state's forest resources, Siecke molded the Texas Forest Service into a unified organization with divisions of work centering on fire protection, industrial forestry, state forests, farm forestry, research, tree planting and education. The personnel includes 17 technical foresters and more than 200 other employees who are engaged mainly in protecting nine million acres of forest land in East Texas.
From 1933 until last year, Siecke administered the work of the CCC forestry camps in Texas.
He has been honored nationally by his membership on the Charles Lathrop Pack Forest Education Board. In 1930 he was elected president of National Association of State Foresters. He is a senior member of the Society of American Foresters. For 18 years he served as secretary of the Texas Forestry Association.
Siecke told Dr. Walton, "It is an emotional tug on my heart-strings to leave the Texas forestry work after all these years. Texas and the splendid people have been mighty fine and have rewarded me beyond what I deserve."

W D Wilson Visits On Campus Last Week
While on the campus over the week-end, for a renewal of contacts with friends and acquaintances, Lt. Wm. D. (Bill) Wilson, '42, dropped into the Battalion office to subscribe to the paper and magazine. "It's one way," says Wilson, "of keeping a finger on happenings on the campus, and a line on graduates who, like myself, are in the service everywhere."
Wilson, native of Prosper, Texas, received his wings and commission with the class of 42-H, the first war class of cadets to enter training at Kelley Field. Subsequent to primary training there, Wilson received basic training at the Tulsa and Enid Fields, and advanced training at Brooks Field where he graduated September 6. Since graduation he has remained there in training as an observation pilot.
While enrolled at A. & M., Lt. Wilson was a distinguished student in Marketing and Finance and a member of K Infantry.

College to Start Drawing Classes In Texarkana Oct 28

A P McDonald Will Direct Teaching of Defense Course With Locals Used
A&M will go farther afield to establish additional Engineering, Science and Management War Training courses when two classes are opened at the Texarkana Junior College in Texarkana, Oct. 28.
In an effort to supply war industries with workers needed as engineering draftsmen, machine detail and tool design draftsmen courses will be offered in cities where men or women with possible requirements might be located. Where such courses have been offered in the past war industries have employed the students in some cases before they could complete the full course.
The course in advanced engineering drawing, as well as the course in machine detail and tool design, will last 16 weeks with six hours a week at night required to complete the work. Students desiring to enroll in the advanced engineering drawing course should be high school graduates and be willing to accept work in war industries.
Those intending to take the machine detail and tool design course should be high school graduates and their work should include at least two years of high school mathematics and not less than one-half year of high school drawing. Local teachers will be used as instructors on the two courses which will be under the direction of A. P. McDonald, of the Texas A&M College staff. At least 15 students will be needed to hold either course.
Application can be made by mail to Engineering, Science and Management, Texas A&M College, College Station, Texas.

The Moslem university of Al Azhar in Cairo, Egypt, was founded in 970.

LONGHORN

(Continued From Page 1)
Members of the Campus Club elected officers that year in a meeting in Pfeuffer Apartments, and the Longhorn's Daily Bulletin carried the headlines, "Valiant Fire Department Saves Lot and One Well!" Cause of the fire was said to be "old Uncle John Guynes, who had just received a hot letter from an old flame."
An advertisement carried by the Exchange Store read as follows: "The place where everything is bought and stole. Our motto: What's one man's profit is the other's loss. Our clerks are fair if we are not, and if we haven't got it, that's your hard luck. WHY GO ELSEWHERE TO BE CHEATED?"
There are some things that time just can't change, and Aggeland is one of them!
China in her war with Japan has lost, in killed and wounded, about as many soldiers as the total population of Texas.
