ing took the upper hand in the fight from then on, for in the seventh Max let go a while clout that caught Louis napping and put him in a daze that stayed with him the duration of the fight. In the twelfth round the crowd saw Louis take his first knock-out of his career. Louis hit the canvas like a dead log.

Louis went on to win the Championship from James Braddock. He was immediately ...challenged ...by Schmeling. Louis agreed to fight him because he wanted revenge. And revenge he did get. No .. one knows why Louis was so bitter, but he was. Perhaps it was .. because Schmeling was a Nazi, or because Louis wanted to save face, ...but whatever it was it really inspired Louis. For when the bell .. ring Louis was out of his corner like a cat preying on a mouse. .. When 2:04 minutes of the first round was gone. Schmeling was a mass of bloody bulk and Louis remained the World's Champion pugilist.

FEATURED ON WTAW

By R. L. Weatherly

For some unknown reason people think that bare-fist fighters of the old days were much more powerful and dangerous than fighters of this day and time. Perhaps they think this because of the long round fights that were staged, and when today they are only limited to 15 rounds. But little do they know that the rounds of those days were not as long as the three minute rounds that are fought today

There have been many great of prize fights. But we think that the Louis-Schmeling match tops

Pruning Is Great Factor in Growing Fruit Trees, Vines

Good fruit, both in quality and yield, is obtained through good care of trees and vines. And, observes J. F. Rosborough, horticulturist for the A. and M. College length. Extension Service, pruning is one of the most important items in the creed of odchard management.

are likel yto lose say from prun- require little pruning. One objec- the others. ing, Rosborough says. A normal plant can carry 30 or 40 bunches cf grapes of maturity. But if too much growth is left, the bunches will be small and many small branches are likely to die on the plant in the latter part of the growing season. Accordingly, he recommends selecting 30 or 40 of the best side branches and removing all other growth. Cut back the remaining branches, leaving two bunds on each shoot.

Normally, blackberry and dewberry vines should be pruned in June, but if the job was overlooked it should not be delayed further. Before applying the shears, all weeds and grass around each plant should be removed with a hoe. Then select three of the best and largest canes and cut out all cthers. If the remaining canes are more than three feet high, top them with the shears or a sharp knife. Young and boyser berry vines should be cut back to three runners on each plant, each runner not exceeding six feet in
