

PROGRAM

(Continued from page 1)

the number of semesters a student has been taking the course. Under the submitted plan, a student will undergo training the nature of which will be determined by his past record and length of time in the physical education program. According to the planned program, conditioning will be emphasized during the first two semesters a student is on the campus. This will include principally running, calisthenics, different testing activities and swimming instruction for those who are unable to meet specified requirements in this department. During his third semester a student will follow much the same procedure as his first year program with running at least once a week and twice weekly for those who have not yet mastered the cross country course. Those who run the course in excellent time on their first attempt will receive sports instruction in their remaining two periods. Those students who are at least in their fourth semester of physical education training will receive advanced instruction in basketball, volleyball, boxing and wrestling, swimming, tennis, gymnastics and tumbling, handball and maybe badminton. They will not be required to run the cross country course, as they will receive this advanced training in all of their physical education periods. All students will meet their physical education classes only three times a week next semester under the planned program. The physical education depart-

ment is changing to this new program because of the present wartime conditions. It has always been the prime objective of the department to keep as many boys on the campus in the best condition possible. Thereby they would be best fitted for military duty when called to the service. The majority of the students on the campus are freshmen and most of them will be able to complete only two or three semesters here before being called, therefore they are having to undergo the most strenuous training that they might be better prepared for the rigors of military life. Those who are sophomores are in much the same military situation as the freshmen, thus they must follow nearly the same physical training procedure. Those in their fourth or fifth semester are either deferred, 4-F, or discharged and are in no immediate danger of being called to the colors. Thus they are able to take the less strenuous, more advanced skilled training.

Out of the 1830 expected to enroll next semester, 1510 are freshmen, 136 sophomores, 111 juniors, 65 seniors and 73 five year students. Under the planned program all the freshmen would receive strenuous conditioning work for at least two or more semesters before they are called to the service.

At the present the physical education program for the remainder of the semester will be modified somewhat. All first semester students will run the cross country twice each week as usual. All second and third semester students will run the cross country once, if excellent, and twice otherwise. All students of fourth semester physical education, or more, who run cross country in "excellent" the majority of times this semester, or who can run excellent three consecutive times, will play sports three times each week. The re-

maintaining students will run the cross country as usual; once each week if 11:00 minutes or less, and twice each week if over 11:00 minutes.

RULES

continued from Page 4

loss of contents may be prevented if fiberboard boxes are wrapped in heavy paper.

"We were unable to deliver many parcels which families and friends sent to men and women overseas last year because they were crushed in transit and the gift and the outside wrapper because separated. We would have been able to make delivery if the address had been shown inside the package. We advise that everyone write the address of the sender and address inside the package as well as outside.

"Christmas gifts mean much to our people overseas. Because strong twine, heavy paper and boxes and fiberboard will prove of real help in making delivery of gifts possible I urge those at home to begin saving these materials now. As time goes on they are going to become even more scarce than they are now."

"Among the more important rules for Christmas mailings to the armed forces overseas are the following.

The parcel must not exceed five pounds, and must not be more than 15 inches in length or 36 inches in length and girth combined. It should be marked "Christmas parcel" so that it may be given special attention to assure its arrival before December 25.

Not more than one parcel may be mailed in any one week to the same member of the armed forces by or in behalf of the same mailer.

When combination packages are made up of such items as miscellaneous toilet articles, hard candies, soaps, etc. the contents should be tightly packed so that they will not become loosened in transit and damage the contents or the cover. Hard candies, nuts, caramels, (including those covered with chocolate), cookies, fruit cake, and chocolate bars individually wrapped in waxed paper should be enclosed in inner boxes of wood, metal, or cardboard.

Perishable goods, such as fruits and vegetables that may spoil, are prohibited. Intoxicants, inflammable materials such as matches or lighter fluids, poisons, and anything that may damage other mail also are prohibited. Gifts enclosed in glass should be substantially packed to avoid breakage. Sharp instruments, such as razors and knives must have their edges and points protected so that they cannot cut through the coverings and

injure postal personnel or damage other packages.

Relatives and friends who know that the personnel in the armed services to whom they plan to send gifts are at far distant points should begin to mail their packages on the opening day—September 15—of the mailing period. Last year late mailing period, threatened to defeat the program. It is stressed that success can be assured, with the limited personnel and facilities available, only if the public gives full cooperation through prompt mailings of the overseas gift parcels from the opening of the mailing period.

Civil Service Opens Work For Inspectors

According to H. U. Yardley, Local U. S. Civil Service Board Secretary, the Immigration and Naturalization Service is in urgent need of qualified men for the position of Patrol Inspector (Trainee). Persons having qualifications shown below are invited to secure an application from the Secretary, Board of U. S. Civil Service Examiners, at any first or second class post office, and forward their application to the Regional Office, Tenth U. S. Civil Service Region, 210 South Harwood, Dallas, Texas.

Applicants must have had at least one year of full time paid experience of sufficient scope and quality to demonstrate the ability to perform the duties of the position. Experience in such positions as soldier, sailor, marine, coast guardsman, salesman, policemen, deputy sheriff, guard or office worker will be accepted as qualifying.

All men between the ages of 21 and 45 will be considered for these positions.

"Applicants must be able to pass a rigid physical examination and must measure at least 66 inches in height in their stocking feet," the Regional Director emphasized.

Persons filing applications will be notified immediately when and

Quality Control Course To Be Given

Announcement has been made by V. M. Faires, Head of the Department of Management Engineering, that a special course in Statistical Methods of Quality Control will be offered here from October 25 to November 2. This course is for supervisors and executives and is intended to maintain quality in production through the application of statistics to inspection problems.

Assistance to Faires will be given by Dr. E. G. Olds and Paul Peach, both of whom are with the War Production Board in Washington, D. C., and specialists in this field. "This is a new tool for managers so that they can tell how things are going," said Faires.

Statistical control is not a temporary war-emergency development but a new scientific approach which already has been applied to a wide variety of products. It is used to standardize products, personnel and machine performance, and inspection methods, and this method may be applied to design, specifications, and standards of performance.

where to report for oral examination. All appointments will be made in conformance with War Manpower Commission regulations.
