Two Stores to Serve You
College and Bryan

By S. L. "Slim" Inzer
Battalion Sports Editor

(As this edition of the Battalion will go to press before the Aggies tangle with Texas Tech, this writer will have to do all of his cussing and discussing about the Bryan Air Field game.)

Aggies Show Class In Opener

Although the Aggies were up against rather slight opposition in the game with the Bryan Air Field Ducks, they did show signs of developing into a first class ball club before the season is over. A young team such as this will become tougher to handle as the season progresses, but their performance in this game showed they will be tough all the way down.

Several members of the squad turned in brilliant performances in the opening game. Bob Butchofsky probably turned in the best all around game of anyone on the field. Besides looking good running with the ball, he turned in a fine defensive game and threw the best block of the afternoon. Bobby Goff reeled off the longest run of the afternoon when he skipped through center and ran 80 yards for pay dirt.

Jimmy Cashion may develop into a first class passer, and the same thing can be said for Tom Daniel. Both boys turned in good jobs of quarterbacking, although Cashion appears to be the cooler player.

Paul Yates looked good carrying the ball on several occasions, but his understudy, "Stubby" Mat-

Aggies Due to Shop Raiders

As this paper goes to press before the Texas Tech game and will not be delivered until after that game, there is no way to make any comments on the action of the Aggies against the Red Raiders. However since my many readers have asked that I predict the games in

Oklahoma Next on Schedule

After the Texas Tech game, the Aggies journey to the Sooner state

to tangle with the University of Oklahoma in a game that promises to be a thriller. Coach "Snorter" Luster is reported to have a big experienced team which is well fortified with Naval trainees; a team which includes three all-Big Six players from last season.

This game is to be played at Oklahoma City on the night of October 7. The Aggies will be at a disadvantage of playing away from home, but as the Texas Tech game was a night game, they should be broken in under the lights.

advance, I will please both of them by saying that the Aggies will win from Texas Tech by the score of 26-0.

If I am wrong on this one, I promise not to pick another winner all year.

GILCHRIST

(Continued from page 1)

percent of those in attendance, about half of whom were in uniforms, were graduates of the Texas A. & M. College. There are only about 287 licensed veterinarians in the 254 counties of Texas, Dr. Grist said. Our livestock industry is too vast and too valuable for this small number to do an adequate job of protecting their health, and he called upon schools like Texas A&M to turn out more skilled manpower.

Dr. Wm. D. Roberts of Wichita Falls, president of the TVMA, presided at the business meetings.

After a number of guests and speakers on the business program had been introduced by Dr. R. P. Marsteller, the meeting went into a business session. Meanwhile, examinations were given Monday morning by the State Board of Veterinary Medical Examiners to a number of veterinarians who wished to qualify for official tuberculin testing of cattle.

Beginning the afternoon program, State Senator Penrose B. Metcalf discussed legislation affecting veterinarians. Large animal obstetrics was handled by Dr. Walter Krill, professor of veterinary medicine at Ohio State University. Concluding Monday's program was a disease panel conducted by Dr. A. H. Quinn of Jen-Sal Laboratories, Kansas City.

Dr. Jas. Farquharson, president of the American Veterinary Medical Association, was chief speaker at the annual banquet held Monday night in Duncan Hall.

On Tuesday's program was an address by Dr. Farquharson on surgical developments. Phases of cattle practice were handled by Dr. F. B. Young, general practitioner, of Wauke, Iowa. Swine diseases were discussed by Dr. H. E. Pinkerton, plant superintendent, Dodge Laboratories of Ft. Dodge, Iowa.

The Tuesday afternoon program included an address on small ani-

mals and their relationship to public health, by Dr. A. C. Merrick of Brookfield, Ill., then three sessions of one hour discussion each on mastitis, small animals and poultry. Another session had discussions of municipal services, including meat and milk inspection, and disease control.

The auxiliary program, handled by Mrs. John N. Milliff and Mrs. H. Schmidt, included a picture show Sunday night, a luncheon at the Oaks in Bryan Monday, the banquet Monday night, and a "coke" party at Mrs. Schmidt's home on Tuesday morning.

NUTRITION

(Continued from page 1)

required for poultry; Fred Hale, head of the Experiment Station swine division, will discuss the role of fats as related to swine. Final talk of the morning will be given by A. L. Darnell of the college dairy department.

Ross M. Sherwood, Experiment Station poultry division chief, will be chairman for the October 11, afternoon session. Talks will be given by A. R. Kemmerer, Experiment Station chemist; Dr. R. V. Boucher, professor of Agricultural and Physiological Chemistry, Pennsylvania State College; R. W. Lueke, Experiment Station nutritional chemist; Dr. P. B. Pearson, Experiment Station nutritionist; and Sherwood. These men will all speak along topics in their line of work.

J. C. Miller, head of the Animal Husbandry department, will lead the October 12, morning session. Dr. Boucher will again take the platform in the morning discussions as will Dr. Pearson. J. M. Jones, chief of the division of range animal husbandry of the Experiment Station and G. S. Fraps, Experiment Station chemistry division chief will also be morning speakers. General topics of the morning discussions will deal with mineral requirements of animal feed stuffs.

Final session on the afternoon of October 12, will be presided over by Hale. Dr. Carl M. Lyman of the swine division will discuss the value of evaluating protein in feeds. Reid, Jones, Copland, Hale, and Dr. V. H. Melass, Experiment Station Husbandryman, will give various talks on protein requirements for different types of animals. The talks will end the discussions of the conference.
