

Aggies Face N. T. A. C. Saturday In Non-Conference Tilt

A. & M. In Best Physical Condition Of Season as All Hands In Shape

Determined to make amends for their dismal showing last week against the Texas Christian University's Frogs, Coach Homer Norton's Aggies will take on the Junior Aggies from N. T. A. C. Saturday afternoon at 2:30 p. m. on Kyle Field.

N. T. A. C. has been strengthened by the addition of five new sailors who will become eligible in time to participate in the game here Saturday. The new men are L. S. Sailer, 180 pound center from Corrigan; W. E. Ruthstrom, 185 pound halfback from Houston; L. G. Scott, 170 pound guard from Dallas; B. J. Powell, 194 pound guard from Dallas; and J. C. Ryan, 180 pound tackle from Meridian. These boys are expected to add

Jesse "Red" Burditt is the chief running threat N.T.A.C. will offer here Saturday. Red was one of the fleet halfbacks on Coach Homer Norton's "Kiddie Korps" of 1943.

I Could Be Wrong . . .

It is getting to be a joke around the campus that I am the worst forecaster in the forecasting business. However, it is too near the truth to be much of a joke. I guessed one out of three last week which is about my regular speed.

For the benefit of the managing editor, I will forego my feelings one more week and try to raise my average.

A. & M. over N.T.A.C.—The Aggies should win this one by as many touchdowns as they want to. The North Texans have failed to show anything in the way of power this fall, so it looks like a push-over for the Aggies.

TEXAS over Rice—This is the most important contest of the week in the Southwest. By outscoring S.M.U. last week, the Owls showed that they are definitely

Aggie Tackle Needs Telescope

It seems as if Coach Homer Norton is going to have to furnish telescopes if he wants all of his players to keep posted on the progress of the games.

In the Oklahoma game, the Aggie mentor called D. M. Denton from the bench with the intention of sending him into the game. Denton, freshman tackle, wears specially built glasses while he is playing, but still doesn't have the best eyesight in the world.

Just to make sure he could see all right at night, Coach Norton asked him if he could see what was going on in the game.

"Can't see a thing, Coach, how are we doing?" was the reply.

Rambling . . .

Coach Norton lost another gridder this week when Alan "Tiny" Sparkman, giant tackle, left the squad in favor of Uncle Sam's Navy. Tiny was an all-stater at Thomas Jefferson in San Antonio last year. . . . Even my good friend Renyard W. Canis has started tak-

contenders. This game may be closer than many expect, but it looks like the Longhorns will come out on top.

OKLAHOMA over T.C.U.—Although the Frogs beat the Aggies last Saturday, they failed to show an outstanding team. The Sooners should win this one by a touch-down or two.

TULANE over S. M. U. — The Greenies swamped Rice and the Owls beat the Mustangs, so it looks as if the Methodists are in for a hard afternoon.

ARKANSAS over Mississippi—The Hogs win one before they come to Kyle Field.

RANDOLPH FIELD over Third Air Force—I picked this one to raise my average. If the Ramblers lose, so help me I'll quit.

SHORT COURSE

(Continued From Page 1)
only saves the executive's time but lowers production costs. Assisting in staging the short course is the Department of Accounting and Statistics, in cooperation with WPB's Office of Production Research and Development and the ESMWT program of the U. S. Office of Education.

J. V. Pennington, vice president, Reed Roller Bit Co., Houston, presided at the forenoon session, and W. H. Thomson, vice president, Texas Power and Light Co., Dallas, at the afternoon meeting.

Fundamentals of Statistical Quality Control were enumerated by V. M. Faires; Paul Peach, industrial consultant, WPB, handled the Introduction of Statistical Quality Control into Factory Practice, and An Experience With Statistical Methods on Industrial Process Control was related by S. E. Sites, Westinghouse E. & M. Co., Mansfield, Ohio.

For the afternoon program, Captain A. R. Burgess spoke on Application of Statistical Principles to the Inspection of Ordnance Material. Putting Quality Control to Work was discussed by Dr. Edwin G. Olds, statistical consultant, Office of Production Research and Development, WPB. Last order of business was a discussion period led by Dr. T. R. Hamilton, acting head of the Department of Accounting and Statistics.

Lectures for the programs for the other seven days of the short course are Edward M. Schrock, quality control engineer, Ordnance Research and Development Center, Aberdeen Proving Ground, Md.; L. S. Kauffman, chief inspector, American Stove Co., St. Louis, Mo.; A. R. Jackson, Curtiss Wright Corp., Columbus, Ohio; and S. E. Sites and Captain A. R. Burgess.

Weather permitting, a barbecue will be given Sunday afternoon to the 25 students registered in the regular course. There will be no speaking program at the barbecue, Mr. Faires said.

The short course now under way at the Texas A. & M. College is the 26th to be held in the United States, and the third in the South,

Purdue university has revived an old regulation calling for cash fines for persons who walk on the campus grass.

Health Department Advises Care For Minor Ailments

Young children may suffer as much from winter illnesses as they do from those commonly known as "summer complaints", in the opinion of Dr. Geo. W. Cox, State Health Officer, and his advice to parents is to guard babies and young children against these winter health hazards.

Influenza, tonsillitis, pneumonia, bronchitis, and asthma are included among those diseases which may be dangerous winter illnesses among young children since they affect the respiratory or breathing system. Such diseases as pneumonia may develop from a neglected cold, that may follow as an after-effect of measles or whooping cough, or they may occur suddenly and with very little warning. These diseases of the respiratory system are more prevalent in winter than in summer and are much more difficult to combat than digestive ailments such as summer complaint.

"These winter diseases are particularly dangerous to babies and young children," Dr. Cox stated. "Nearly all of them are spread through the secretions from the nose and mouth. Children not in vigorous health are naturally more susceptible to these complaints and the first line of defense," Dr. Cox caution, "is to strengthen the powers of resistance against disease; the second is to keep them under medical supervision and the third is to make sure they avoid contact with others who have coughs, colds, or fevers."

according to the records of Dr. Edwin G. Olds. Similar courses now are under way in Los Angeles, with one due to start soon in San Francisco. Around 500 of the leading business institutions in the United States have had representatives attending these short courses, with 2,548 executives attending the first-day conference, and 1,314 taking the full course, these figures including the Texas A. & M. meeting.

There is no tuition charge for the short course, but the registrant must provide his own text books and living expenses. A certificate is given to those who satisfactorily complete the course.

It is planned by the Department of Management Engineering to have a number of follow-up meetings to be held at six-week intervals at different locations in Texas.

BEAT N. T. A. C.

If a person waited in one place on the earth for a total eclipse of the sun to take place, he would stay there for 360 years, says Dr. C. H. Clemmshaw of the University of Southern California.

Testing Mica Sheets

Mica's special insulating qualities are mighty important in communications equipment. No equivalent exists, so war's huge demands caused a critical shortage.

Bell Telephone Laboratories' scientists were assigned the task of somehow finding more mica. They found it—in the very considerable amounts of raw mica which visual inspection had rejected. By developing electrical apparatus to test the two most important electrical properties, they increased the usable amount of mica by half and so stretched current supplies of mica to fill all military needs.

In many such ways the Bell System is serving the nation, constantly meeting the needs of our fighting forces for dependable communications.
