

WTAW Batt Chat

Don Milton, the uncommon crooner with the fluid-drive larynx, will sing that saga of strap-hangers everywhere, "The Trolley Song," via the WTAW broadcast of Yours Alone, Friday, January 26, at 2:45 p. m., CWT.

With youthful abandon Milton also will sing "I Don't Care Who Knows It" and the perambulatory paean, "I Walked In." Orchestral accompaniment will be supplied by Rex Maupin's orchestra.

Yours Alone, starring Don Milton, is broadcast over WTAW Mondays through Fridays.

The a-cappella choristers, under the direction of Harry S. Walsh, will intone "Kentucky" and "Sweetest Story Ever Told" on the Aunt Jemima Show, Wednesday, January 24, at 9:25 a. m., CWT, over WTAW.

On Thursday, January 25, the choir will sing "Ring de Banjo" and "Why Do I Love You," and on Friday, January 26, "Remember Me to Carolina" and "When You and I Were Young Maggie."

Harriet Widmer, portraying Aunt Jemima, will philosophize with her customary cheer.

The Harmonizers, melodic string sextet, will swing out with the "Twinkle Toe Polka" and the "Twelfth Street Rag" on the WTAW broadcast of Farm and Home Makers, Wednesday, January 24, at 11:30 a. m., CWT.

Curley Bradley, baritone m. c. of the program, will sing "It Had To Be You" and "I'll Be Seeing You." The Cadets Quartet will intone "The U. S. A. by Day, the R. A. F. by Night," and the orchestra directed by Harry Kogen will play the "Thunderer March" and "The Best Things in Life Are Free."

The Monday through Friday Farm and Home Makers series is produced by Robert B. White.

Father was a log scaler at a local lumber mill, but mother had her mind set on owning the finest mansion in town. How she talked him in to it, and let him think he

had figured it out by himself, is the theme of WTAW's Listening Post dramatization of Thursday, January 25, at 9:45 a. m., CWT. The radio version is based on a story by Glenn Allan, titled "A House for My Father."

Jack Owens, celebrated Cruising Crooner of WTAW's Breakfast Club, has deviated somewhat from his childhood ambition. As a little boy he had his heart set on becoming a singing evangelist.

Geared to put starch in any pair of good white bobby-socks, the new WTAW That's For Me program, featuring the bouncing swingstress of song Dorothy Claire, now sizzles the air waves each Monday through Friday from 3:30 to 3:45 p. m., CWT.

Highlighting the program with her songs and patter is Miss Claire, who, although only 21 years of age, has been a featured singer with such orchestras as Glenn Miller's and Bob Crosby's and currently is appearing at Chicago's famed Latin Quarter.

With the quarter-hour directly aimed at Swing fans, Miss Claire daily introduces the Swingsters, a novel musical combination who devote their spare moments to producing a new mixture of smoochy-smoochy jive. Composing the Swingsters are Frankie Rullo at the vibraphone, Seymour Dragan, guitar, Benny Gill, violin, and "Stompy" Siegel, bass.

Rex (affectionately called "Rexford") Maupin and his 18-piece orchestra provide the licks, breaks and the background data for Miss Claire's hypo'd renditions of today's most popular songs.

Raymond Gram Swing, internationally famed commentator and analyst who launched a new series of interpretations of current events over WTAW beginning Monday, January 22 at 6:15 p. m., CWT, has definite ideas about presenting each day's news.

"My ideas about my work as a news analyst are quite simple," explains Swing. "We are in a war, the greatest war of all time, which is bound to determine the destiny of America. So the war is the topic to which I confine myself at present and discuss domestic issues only so far as they affect our ability to fight the war with all our strength."

"Since we are a democracy we cannot do this without full information, and without persistent discussion of the problems of the war. And since the war is political as well as military, and victory will not be won unless the peace is won, there must be as persistent a discussion of the political issues."

"I speak of confining myself to this topic, but it is obvious the field is almost infinite and the only confinement is my own ability, and time," continues the distinguished commentator who will be heard over WTAW Monday through Friday. "I have the good fortune to have spent more than 20 years abroad as a foreign correspondent, seven of them in Germany. I was correspondent during much of the first World War, and I have a long first-hand acquaintance with foreign relations. And, having served two years after the last war as a financial journalist, I have some insight into the economic as well as the political structure of the world."

COLONEL

(Continued From Page 1) the Battalion, will give the welcoming address. Dick Goad, acting master of ceremonies and president of the Press Club, will then introduce the guests and the members of the Battalion and Longhorn staffs. A series of popular numbers will then be offered by the singing cadets' quartet under the direction of W. M. Turner. Members of the quartet are W. C.

Chaplain Reverts to Horse and Buggy Tactics On Missions

GI spiritual needs have created a rebirth of the old-time horse and buggy circuit rider, according to the experience of Chaplain Roscoe C. Hauser, Jr., newest Chaplain assigned to the West Point of the Air.

Substituting the more modern transportation media of airplanes, trains, busses and automobiles for the pioneer carriage, Chaplain Hauser covered 5,000 miles monthly for over a year in his previous assignment setting up religious facilities for dozens of AAF Training Command college detachments and contract flying schools in eight southeastern states.

With three AAF colleagues, Chaplain Hauser traveled night and day gathering clergymen of all denominations into a mammoth enterprise to provide religious guidance for 120 flying and pre-flight study centers in the southeastern area.

Despite the difficulties encountered in seeking travel and living accommodations throughout the broad area—at one locality the only guest sleeping arrangement was afforded by a one-bed hospital dispensary, Chaplain Hauser recalls with gratitude the ready cooperation of civilian clergymen in giving their time to provide religious services to GIs.

Chaplain Hauser, who was assigned to Randolph Field late in June, was connected with Texas A and M. College for five years before entering the service.

Texas has about 225 different tree species and some 53 varieties representing about 86 different genera or natural tree groups.

Radio Pick-Up Varies With Phases of Moon

Radio reception has now been found to vary with the phases of the moon, it was disclosed here in a General Electric Science Forum address by Dr. Harlan True Stetson of Cambridge, Mass., director of the laboratory for cosmic terrestrial research, Massachusetts Institute of Technology. Citing the results obtained from data after more than 20,000 hours of observation over two periods of four years each, Dr. Stetson said:

"From the study of our data, made on those nights when the moon was overhead, we found radio reception definitely improved from the time of the moon's first quarter to shortly before full moon. After full moon, radio reception deteriorated, but began to improve again from about the last quarter until a few days before new moon. This, of course, is true

for a certain particular frequency over a certain path we were measuring."

However, in observations made when "the moon was below the horizon"—observations made in the dark of the moon, "We found no such effect, where no radiation from the moon's surface could reach the radio waves over the path we were studying," Dr. Stetson pointed out.

"The same thing happened in both series of data, except that the lunar effect was more pronounced during the second four years of our data than during the first four years," he declared.

"We know there is increasing evidence to believe that in space the sun must be emitting very penetrating rays of high energy, probably similar to X-rays," Dr. Stetson said.

"It is these rays which bombard the upper atmosphere of the earth, creating the ions and electrons in our so-called ionosphere.

"Unlike the earth, the moon has no atmosphere to stop or absorb these rays. Every physical laboratory worker knows that when X-rays, or very short ultraviolet rays, shine on a metal plate—or almost any substance, for that matter—the object so illuminated sends off electrons. This is what we call the photoelectric effect.

"In our hypothesis, we believe that photo-electrons are emitted from the moon, as the very inten-

sive sunlight in space bombards the unprotected surface of the moon. We believe that it is these photo-electrons coming from the moon and entering the earth's atmosphere that have the necessary energy to increase the ionization of our radio ceiling.

"In fact, radio observations show that the intensity of ultraviolet light hitting the top of our atmosphere is more than twice as great during sunspot maximum than during sunspot minimum. We should, therefore, have a right to expect that the photoelectrons emitted from the moon would be appreciably increased with the increase in the intensity of the solar rays accompanying large numbers of sunspots."
