

Old Method Used For Rowe Paintings

By PAUL CROSSLAND
Battalion Staff Writer

An old painting method was rediscovered when Guy Rowe painted the characters for "In Our Image," said Mrs. Ralph Terry, advisor and instructor for the MSC Art Gallery Committee.

During and before the middle ages, a mixture of wax, grease, and color chalk was used for paintings. After the middle ages, a new method was introduced whereby the use of oils on canvas was employed. This system has been used to the present days, she said.

Introduces Old Method

Rowe introduces the old method and used on proteoide in his new paintings. This method is to paint the picture on the reverse side of the proteoide. This is believed to give the art better color, achieve extreme detail and to protect it.

Fifteen of Rowe's 32 paintings are on display at the MSC. They make up an exhibition that not only art people enjoy seeing, but every person who enters the MSC. As T. H. Russel, senior from Vernon, said, "I've never seen anything like it. I like them better

than any paintings I've seen." Students, professors, and even little children gaze at the pictures with interest. Ernest Langford, head of the architectural department, said, "Most magnificent paintings I've seen." P. B. Goode, Professor Business Administration, said, "I like 'em."

Gained World Recognition

The 32 masterpieces of "In Our Image" have gained world recognition because of their realistic expressions, color, detail, and above all the touch of the artist. Rowe visualized his conception of the characters in the Old Testament.

People don't just walk by this art collection. They stay, study, and shake their heads with amazement. G. A. Pratt, senior from San Antonio, said, "They are realistic without a doubt." E. R. Bennett, senior from Sweetwater, said, "Pretty colorful, lots of age in human beings." J. E. Adams, Professor of Agronomy, said, "They are marvelous pictures."

Nine year old Bob Fitts from College Station, leaned his nose against the glass and said, "I think they're really all right."

Rowe painted clear images, images he studied for years to obtain. He began these paintings in 1945 and completed them in 1949.

Artist Rowe studied the Bible thoroughly, read and re-read it, and he himself said, "Before I did these paintings, I was a nominal Christian. But now I hope to devote the rest of my life to religious art."

Texas Flag Upside Down

The little men in charge of flying the flags are living in an upside world.

For the past two weeks the Texas flag, flown in front of the Administration Building, has been upside down.

What would the forefathers of the state say about this? What would Sully have to say?

A patriotic student from B Artillery was reported to have stood at the flag pole's base for hours yesterday with a large tub. He was afraid the upside down star might fall out of the blue field.

What's Cooking

(Continued from Page 1)

El Paso Valley Compress Company, Fabens, contributed \$453.52 for research on control of Verticillium wilt disease of cotton at the Ysleta substation.

Texas Phenothiazine Company, Fort Worth, gave \$165 for traveling expenses in connection with the station's research on control of diseases in vegetable crops.

Turf Assistantship

A grant of \$290 was received from Goldthwaite's Texas Toro Company, Fort Worth, to support a turf assistantship in the Agronomy Department.

The American Dehydrators Association, Kansas City, renewed a \$3,000 grant for research on nutritional value of dehydrated alfalfa meal.

Grants of \$1,400 and \$100 came from Chipman Chemical Company, Bound Brook, N. J., to aid research on cotton defoliation and livestock feeding tests with rice straw sprayed with a chemical.

Dow Chemical Company, Midland, Mich., contributed \$3,000 for study of crystalline amino acids as a supplement in turkey feeds.

Poultry Research

A grant of \$2,500 from E. I. DuPont de Nemours & Company, New Brunswick, N. J., will be used in research on amino acid requirements of growing chicks and poult.

The Entomology Department will use a \$300 grant from Moorman Manufacturing Company, Quincy, Ill., for evaluating a mixture of DDT and methoxychlor as an insecticide.

A U. S. Public Health Service grant of \$7,250 will be used to continue research on nutritional requirements for embryonic development and growth under direction of the Biochemistry and Nutrition and Poultry Husbandry Departments.

Other Gifts

The board of directors accepted in addition to cash gifts and grants,

Highway Cash Big Problem For Legislature

Finding revenues to maintain Texas highways will be problem facing the new state legislature when it convenes in January.

State Senator William R. Moore from Bryan told members of the College Station Kiwanis Club Monday part of the problem was caused by legislation which increased truck load limits from 48,000 pounds to 58,000 pounds.

"The state spends about \$119 million annually for the maintenance of highways, which is about \$100 million short of what is needed," the senator asserted.

Senatorial redistricting was explained by Moore who emerged from the last congressional session representing District 11 instead of District 14.

The law requires senatorial and representative districts be formed following every national census. The bill providing for new representative districts failed to pass; however, senatorial districts were reformed.

Under the new plan Central and North Texas lost four senators, West gained one, and South Texas gained two senators. Moore attributed this to a shift in population since the last redistricting.

Street Markers All Erected Here

The job of erecting street markers in College Station has been completed, according to Ran Boswell, assistant city secretary.

The markers are concrete. The street names are cut into the sides of the markers and painted maroon. Workmen were shifted from the street and water departments to complete the job which was started last summer, Boswell said.

DeMolays Plan Church Services Thanksgiving

Brazos County DeMolays will attend Thanksgiving church services en masse Thursday morning at 9 at the First Baptist Church in Bryan.

The Brazos Chapter Order of DeMolay extended an invitation to all DeMolays attending A&M to join them in attending the service.

DeWerth Says Bottles Not Thrown Away

Men in the campus grounds department do not throw soft drink bottles away when they are picked up, A. F. DeWerth, head of the Landscape department told The Battalion yesterday.

DeWerth was questioned on the bottle pick up after rumors went out among the student body saying the grounds men picked up the bottles and threw them away.

The head of the department said the men cleaning the campus would gather the bottles and put them under the trees for the local bottling companies to pick up. However, he said, "If they are not picked up by the bottling company within a reasonable time we do throw them away. We give the company every opportunity to pick them up."

Dr. E. B. Evans Honored

New Prairie View Building Named After Its President

Dr. E. B. Evans, who has served Prairie View A&M College 33 years and now is president of the institution, was honored today when the board of directors of the A&M System named the new Prairie View animal industries building for him.

The board order which named the new building said, "Dr. E. B. Evans... has worked unselfishly for the betterment of the institution and its service to the Negroes of Texas.

Recognizes Outstanding Service

"The board of directors of the Texas A&M College System recognizes his as an outstanding service, not only to the Prairie View A&M College, but to the State of Texas as well. In recognition of his leadership in education and particularly to his outstanding service to Prairie View A&M College, it is ordered that the agriculture building just completed be named in his honor as the 'E. B. Evans Animal Industries Building' and that a bronze plaque bearing this name be placed on the building."

In recommending that the building be so named, Chancellor Gibb Gilchrist said, "Ordinarily I do not think it a good idea to name a building for a living person, but there are times when the exception rather than the rule should be adopted... Under the leadership of Dr. Evans, Prairie View has become a moving, vital force in Negro education in the United States. He has made the school an

important cog in the A&M System..."

During his 33 years at Prairie View, Dr. Evans has served as acting principal, acting registrar, coordinator of instruction, director of summer school and acting director of the division of agriculture.

Born in Jackson County, Mo., in 1894, he was reared in Texas. He was one of the first Negro graduates of Iowa State College, receiving a doctor of veterinary medicine degree in 1918. He also was one of the first Negroes in the nation to be elected to Phi Kappa Phi, national honorary scholarship society.

Commissioned a second lieutenant during World War I, he was a member of the Officers Reserve Corps for a number of years.

Dr. Evans did graduate study at Iowa State College. He was vice principal of Prairie View from 1931 to 1945. He was one of the founders of the Southwestern Athletic Conference in 1920, and in 1935, he and other athletic officials of the Negro colleges in the Southwest founded the Coaches and Officials Association. Dr. Evans served as secretary-treasurer of the group until 1945.

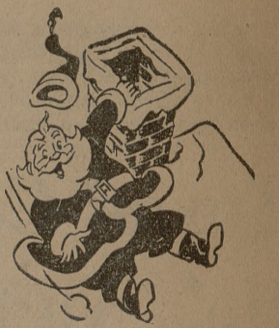

Highest Boy Scout Award

He headed the F. E. R. A. Adult Education Summer School at Prairie View in 1935, when 600 teachers received their initial training in the field. For 10 years Dr.

Evans headed the Boy Scout Camp at Prairie View, and during that time attendance grew from less than 50 to 510. During the last year, he received the Silver Antelope, highest award of the Boy Scouts of America, for his distinguished service to boyhood.

In a recent meeting of the Association of Negro Land Grant College presidents in Washington, D. C., Dr. Evans was elected vice president of the national organization.

Dr. and Mrs. Evans have two children, a son and a daughter. Their son, Edward, Jr., has served as an instructor at Texas State University, Houston.
