

Eisenhower Blasts Book Burning Trend

Following are some of the statements made by President Eisenhower on Sunday before the graduating class of Dartmouth College concerning the purging of books on Communism from U. S. college libraries.

"We have got to fight it (Communism) with something better, not try to conceal the thinking of our own people," the President said.

"They are part of America, and even if they think ideas that are contrary to ours, their right to say them, their right to record them and their right to have them in places where they are accessible to others is unquestioned, or it is not American.

"Don't join the book burners," the President told the graduates. "Don't think you are going to conceal faults by concealing evidence that they ever existed. Don't be afraid to go into your library and read every book.

"As long as any document does not offend your own ideas of decency, that should be the only censorship. How will we defeat Communism unless we know what it is, what it teaches and why does it have such an appeal for men?"

"Why are so many people swearing allegiance to it? It's almost a religion, albeit one of the nether religions.

"This country is a long way from perfection.

"We have the disgrace of class discrimination, prejudice because of religious affiliation; we have crime on the docks.

"We do not have the courage to uproot these things, though we know they are wrong.

"Your sense of satisfaction is not going to be satisfied unless you have the courage to do your best to correct them. It is not enough to say 'I love America,' salute or tip your hat and sing the Star Spangled Banner," he said.

Churchill Praises UN Stand In Korea

Editor's Note: Following are excerpts from the statement made by the British Prime Minister, Sir Winston Churchill, in the House of Commons on June 9:

As the House is aware, on the 8th June the Armistice Delegations at Panmunjon signed the agreement on the question of prisoners of war.

We are satisfied that the arrangements now agreed will ensure that no prisoner of war is repatriated by force. India will be invited to provide the forces to take custody of prisoners under the Neutral Nations Repatriation Commission. Prisoners who refused to be repatriated will not be detained beyond 120 days after they have been transferred to the custody of the Commission.

The other provisions have been agreed for many months past. Thus nothing ought now to stand in the way of an armistice except the administrative arrangements.

I will repeat again to the House what I said a month ago upon our relations with the United States about Korea:—

"The United States, as mandatory for the United Nations, has borne nineteen-twentieths of the burden in blood and treasure. The matter is not one which we have either the right or the responsibility to decide, but it is our duty without

separating ourselves from our great ally to express our opinion frankly and plainly to them as occasion offers."

We made a number of suggestions to the United States Government. These were most attentively considered. In the result we found ourselves in complete accord on the new proposals to be made at Panmunjon. We thought it right in view of this to make public our intention to support the United States.

Under the decisive guidance of President Eisenhower a result has been achieved.

I do not feel that full justice has been done by us during the last few months in the difficulties to which General Clark and General Harrison were subjected not only by Communist obstinacy but also by the attitude of the South Korean Government.

One must remember that it was the policy of the United States to build up a strong, well-armed, efficient South Korean Army which would relieve them of the heavy burden they have been carrying. This Army has been a factor of growing importance. In my opinion these Generals faithfully sought to bring hostilities to end in terms compatible with the honour of the allied Powers. They had to consider the reactions which might occur in the powerful South Korean forces which they were creating.

State Health Department Suggests Salt In Water

If your work is such that it causes excessive perspiration, add a pinch of ordinary table salt to each drink of water you take to help prevent heat cramps. This is advised by Dr. Geo. W. Cox, State Health Officer, to prevent a possible increase in the number of heat victims as the Texas thermometer hits 95 degrees and above.

Laborers, mechanics, farmers and white collar workers whose work causes them to sweat profusely, are in danger of having their body salt content become deficient with resulting heat cramps or heat fag. Salt is a prominent constituent of sweat; the body may lose as high as 40 to 50 grams

of salt during hot days. In industry, a method of preventing heat cramps is to take a tablet of pure salt or a mixture of salt and dextrose with each drink of water. Workmen whose duties require muscular exertion should be especially careful to add more than the usual amount of salt to what they eat and drink.

Salt deficiency may be prevented by taking salt in various ways. Where prepared tablets are not available, table salt may be added to each drink of water. Milk is a source of salt and will help to make up for the deficiency caused by sweating. Alcoholic drinks should be avoided.

R.J. Anderson DVM Named New Chief

Dr. R. J. Anderson, who holds a Doctor of Veterinary Medicine degree from A&M, 1935, has been named assistant chief of the Bureau of Animal Husbandry, Washington, D. C. He took over his new duties June 7. He is a native of Marshall.

He played an important part in the successful administration of the foot and mouth disease eradication campaign in Mexico, serving throughout the entire campaign from 1947-52. He is widely known for his part in disease eradication and has been with the Bureau since graduation from A&M.

In his new capacity Dr. Anderson will be responsible for all the Bureau's regulatory activities in disease control and eradication.

Married Legislative Team Unique In Capitol Affairs

Austin, June 14—(AP)—Bob Gurley was a nice looking young man who kept a lonely vigil in the house gallery this session as the only legislative husband in the legislature.

Wife, Dorothy, was busy. She's the representative from Del Rio, chairman of the important water conservation and reclamation committee this past session and a member of four other committees.

Three women served in the house and one in the senate. But Rep. Dorothy Gillis Gurley of Del Rio was the only one who was married. Bob used to grin when somebody teased him about forming a legislative husband's club like the legislative wives' club.

The Gurleys and five-year-old daughter, Susan, went back to their ranch near Del Rio when the session was over.

Future political plans? "I don't know right now," she said. "Susan

will be six in December, and I must get her in school. That's all I'm going to worry about right now."

The only other woman chairman of a house committee, Rep. Virginia Duff of Ferris, wants to continue in the legislature "because I'm interested in better government in our state."

Miss Duff was chairman of the state hospitals and special schools committee, a member of four other committees, and busy, too. She made a personal visit to every one of the 26 eleemosynary institutions in Texas—believed to be the first time any chairman has done that.

Both the women are young enough to tell their age if they wanted too, conscientious in their duties and the holders of a good deal of respect from their fellow legislators.

Has Law Degree

Miss Duff is a blue-eyed brunette with a law degree from Southern Methodist University. Mrs. Gurley is a brown-eyed blonde with a bachelor of arts degree from the University of Texas.

When 60 men from Palestine and Jacksonville crowded into a conservation committee hearing one time this session, one of them whispered to a reporter, "Who's that good-looking girl at the head of the table?"

That was Mrs. Gurley. Her committee handled some 60 bills this session, and they tackled each one gingerly, for water was

Plans Furthered For Better Forecasts

Plans for securing more reliable, daily weather forecasts applicable to forest areas and conditions in the north, central and the southern coastal section of the East Texas pine belt were made at a meeting of representatives of the U. S. Weather Bureau, Texas Forest Service and the U. S. Forest Service, at the fire control headquarters of the Texas Forest Service, Lufkin, June 1.

Such forecasts as planned, will be furnished daily by the U. S. Weather Bureau during critical fire periods.

The U. S. Forest Service and Texas Forest Service will furnish to the U. S. Weather Bureau information obtained from weather stations maintained by each agency in the forest area.

This information will be utilized

in evaluating climatic conditions the region by the U. S. Weather Bureau and will be reflected in the daily forecasts to the agencies.

Representing the U. S. Weather Bureau at the meeting were B. P. Hughes, meteorologist, U. S. Forest Service, Washington, U. S. Forest Service representative were Frank W. Paul, supervisor and assistant supervisor, respectively, of the Texas Forests, Lufkin.

The Texas Forest Service representatives were J. O. Hughes, head, Fire Control Department, and M. V. Dunmire, section head, Plans and Training Section, U. S. Forest Service, Lufkin; Anderson, head, Research and Control Department, College Station; and District Forester, Green, Woodville and Lufkin.

The forecasts will be furnished to the Bureau Station, Shreveport, La. "Large and small timberland owners will benefit from the weather forecasting," he pointed out.

"Such information will be used by these owners in their wildland work, aid in controlled work and serve as a physical against setting field fires by ing trash on highly flammable days," he said.

The Texas Forest Service also serve as a clearing house for the Weather Bureau in dealing with forest conditions.

Introduced Bill

She introduced and got passed in the house and senate a bill to permit land owners to build 200-acre-foot ponds on their land without a permit from the water board. They're limited to 50-acre feet under present law.

"And that's what I think is an important part of water conservation," Mrs. Gurley said. Small, individual dams on private property. Conservation will take individuals cooperating with local districts and state agencies."

Miss Duff believes that Texas' state hospitals are in "fair condition."

"There's room for improvement," she said. "They're overcrowded and they have long waiting lists. But they'll always be overcrowded and have waiting lists no matter how many buildings we build."

The serious problem, she said, was the low salaries that must be paid to hospital employees.

"It's difficult to keep qualified men—they do so much better in private practice," she said.

Scientists Say Atom Blasts Not Storm Cause

Washington—The top scientists of the Atomic Energy Commission and the U. S. Weather Bureau are agreed that recent atom bomb explosions have nothing whatsoever to do with the nation's worst siege of tornadoes and freak weather. Representative Albert Thomas of Houston reported Wednesday.

Thomas, a member of the House appropriations subcommittee which handles atomic energy funds, said he quizzed AEC specialists most of one afternoon in a closed-door subcommittee hearing recently on the bizarre weather which has followed test explosions.

"We went into it in great detail," Thomas reported. "And the top experts of AEC insisted that the test explosions have absolutely no connection with weather. They said further that they have discussed it with the U. S. Weather Bureau, and that the weather bureau specialists agree with them that the explosions haven't affected weather at all.

"But," Thomas continued, "strange things are happening—and time may prove that the experts are wrong. I don't know."

Thirty Tons Iron Donated To A&M

Thirty tons of pig iron have been donated by the Lone Star Steel Company to the A&M Research Foundation for ballast on the newly acquired research vessel, "Atlantic."

The "Atlantic" is being outfitted for oceanographic research to be carried out under the direction of the department of oceanography.

This donation was made in recognition of the distinguished service of Raleigh Hortenstine, a member of the board of directors of the Steel company and president of the board of trustees of the Research Foundation.

Air Reserve Meets At New Quarters

The 9807th Volunteer Air Reserve Training Squadron held its regular weekly meeting at 7:30 Monday night in its new headquarters at 3600 College Road in the old Triangle Drive-in midway between Bryan and College Station. A special training program was arranged including a guest speaker from Bryan Air Base. A training film completed the program.

Butler Will Give Paper On Meats

Dr. O. D. Butler who has just returned to active duty in the animal husbandry department will present a paper before the National Association of Meat Retailers, on "Some Causes and Measurements of Color Changes in Fresh Retail Meat Cuts."

He was granted a leave of absence in 1951 to do graduate work at Michigan State College under a General Education Board Fellowship.

He received his degree at the end of the spring term. He did his work under Prof. L. J. Bratzler, nationally recognized authority on meats.

Dr. Butler's work has attracted national attention and his paper to be given before the NAMT soon is attracting wide interest.

He is in charge of meats research and instruction in the animal husbandry department.
