Fred J. Benson
... dean of school of engineering

Benson Welcomes Engineering Fish

To Engineering Freshmen:

It is a real pleasure to welcome you to A&M. As you arrive on the campus, you will be starting a new phase of your life. The preparation for a career is of great importance and is something which no one else can accomplish for you. There are years of arduous labor ahead and only by diligent application can you do the job well. Keep clearly in mind just what your primary purpose for being here is and concentrate your best efforts on it.

The field of engineering is a very broad one and you should choose that branch in which you have a real interest. Industrial developments in Texas and the southwest since World War II have been quite rapid and the opportunities for employment near home have been greatly increased. For fifteen or more years, the demand for capable engineers has been very strong and it appears that this demand will continue in the foreseeable future. Scientific discoveries are being made at a rapid rate and engineering developments are moving forward, hand-in-hand with the discoveries. Since forty per cent of the industrial executives of the country are graduate engineers, it indicates that there is ample opportunity for broadly educated engineers outside of the purely technical field.

Your first two years in college are largely in the field of general education, basic science and mathematics. In fact, the first years work is the same in all branches of engineering and there are only

a few differences in the sophomore year. Thus a change in the branch of engineering can be made within the first year with no loss of credits.

We, in the office of the Dean of Engineering, will have the responsibility and pleasure of helping to guide you while you are in college and we want you to feel free to come to us with your problems. C. H. Ransdell, assistant to the Dean of Engineering, will direct the counseling for engineering freshmen and his years of experience in this area will be of great value to you. We extend to you a cordial invitation to come in and get acquainted.

Sincerely,
Fred J. Benson
Dean of Engineering

Ryan Re-Elected To PSA Position

Cecil B. Ryan, professor in the Department of Poultry Science, has been re-elected secretary-treasurer of the Poultry Science Assn.

He has been re-elected to this position each year since 1954. He is also a member of the Executive Council of the Poultry Science Assn.

Papers from 15 projects conducted here were reported on at the Poultry Science Assn. annual meeting in Davis, Calif., Aug. 2-5, Ryan said.

He was re-elected at the California meeting.

Farm, Ranch Youth Camp Ends at Adjunct

Thirty-two outstanding farm and ranch youth from every section of Texas attended the sixth annual Range Camp at the A&M Adjunct at Junction last week.

Studying and observing good range management practices, soil and water conservation as it relates to watershed management, livestock selection, plant identification and other subjects dealing with range management was on the agenda for the campers.

The camp program also included visits to outstanding ranches in the area as well as the Sonora Experiment Station.

Bobby Ragsdale, associate extension range specialist, said the camp was staffed by experienced workers in the range management field.

They are from A&M, the Agricultural Experiment Station, the Soil Conservation Service, other Texas colleges, county agricultural agents and vocational agricultural teachers.

Scholarships provided by home towns or county organizations enabled the boys to attend the camp, sponsored by the Texas Section of the American Society of Range Management.

The camp, Ragsdale said, was part of the Texas Society's program for making youth more familiar with the importance of maintaining and improving the condition of ranges in the Lone Star State.

Study Planned Of Oklahoma, Texas Marketing

Competitive position and potential of livestock marketing in the Texas-Oklahoma area will be analyzed in a special study in which agricultural economists of A&M College will take part.

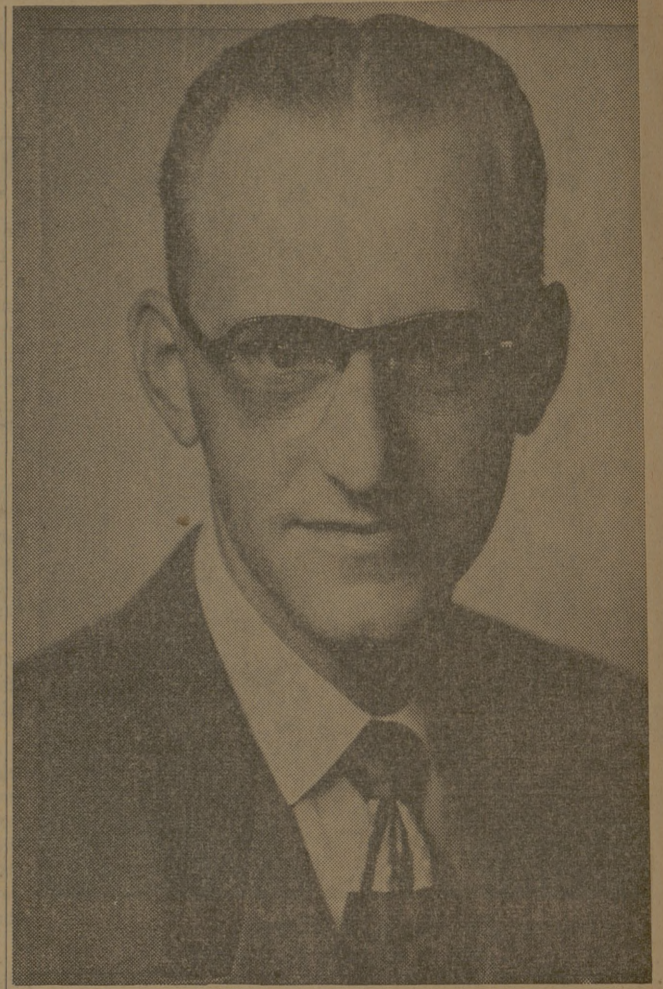

The study will get under way sometime this fall.

Cooperating in the study will be the Texas and Oklahoma agricultural experiment stations and the Agricultural Marketing Service of the U. S. Department of Agriculture, Dr. John G. McNeely, leader of research in the Department of Agricultural Economics and Sociology, said today.

Economists who will conduct the study are Dr. Jarvis Miller of A&M and Dr. Willard Williams of Oklahoma State University and Raymond Dietrich of the Agricultural Marketing Service, now studying at Oklahoma State University toward a Ph.D. degree.

They will analyze the meat industry of the two states, channels of distribution and their location as affected by regional shifts of livestock production and the marketing practices.

Major efforts in Texas will be centered in the Dallas-Fort Worth, Houston and San Antonio areas, McNeely said.

Dr. A. A. Price
... veterinary medicine school dean

Price Welcome Pre-Vet Freshmen

To Pre-veterinary Freshmen:

The career of veterinarian to which you aspire has both problems and rewards. The veterinarian is always a public servant and must be equipped emotionally and academically to help the livestock producer. The benefits of the service to the livestock producer is the veterinarian's greatest reward.

Opportunities in veterinary medicine are many and there is an acute shortage of veterinarians. The great need for veterinarians is in general practice where the animal health problems of the livestock producer can be dealt with and profits increased. The federal and state governments need more veterinarians in animal disease research and control and in public health.

The veterinarian must become well equipped in many areas during the six years of college training. First, he must get a broad and basic liberal education so he may effectively deal with the people he is to serve and become an asset to his community. Second, he must become a scientist with the basic knowledge of many areas of science and develop the "scientific attitude". Third, he must be come well trained in both the art and science of medicine and realize the application of medicine and surgery to many species of animals. Finally, he must become well acquainted with the many phases of agriculture that so intimately affect the welfare and health of animals. To accomplish this high level of education a training you will have to work hard, be curious, and take advantage of every educational opportunity.

We are pleased that you have chosen veterinary medicine as a career and A&M for your training. We welcome you to Aggieland and will look forward to meeting each of you personally.

Sincerely,
A. A. Price,
Dean, School of
Veterinary Medicine

Church of Christ Bible Chair Head Attending Clinic

Billy Earl Williams, newly arrived director of the Church of Christ Bible Chair at A&M, is attending a Bible Chair Clinic and Lectureship this week at Tyler Junior College in Tyler.

The clinic will feature lecture on such topics as "The Bible Chair Director," "Developing an Effective Student Program" and "The Bible Chair Movement."

Symposiums and open discussions will also be featured for the benefit of the bible chair director and church workers who attend.

C. H. Bernard and J. B. Blakeley, two elders of the A&M Church of Christ and Levi Gentry, th minister, will attend the last day of the clinic which continues for three days Tuesday through Thursday.

Wee Aggies

A future Corps commander, James Arnott, was born Aug. 16 to Mr. and Mrs. Lester J. Mahlen, '61, of 1823 Foster, College Station. The 9 pound, 1 ounce boy was born at St. Joseph's Hospital in Bryan.

Vickie Joan Hinton was born July 23 at St. Joseph's Hospital in Bryan to Mr. and Mrs. Jimmy Hinton, '60, of A-5-Y College View. The future Aggie sweetheart weighed 5 pounds, 1/2 ounce.

A future Aggie sweetheart was born Aug. 8 to Mr. and Mrs. Edward B. Anderson, '60, of 504 A Milam. The 8-pound, 3-ounce girl was named Harriet Irene.
