

INTERPRETING

US Said Favoring Atomic Power Pool

By J. M. ROBERTS
Associated Press News Analyst

The United States is now reported to favor an Allied pool of atomic power in the North Atlantic Treaty Organization in the hope of persuading France not to press development of her own nuclear striking force on the outside.

France, on the other hand, is determined to go ahead with a national force even if the Polaris force should be integrated into NATO.

The United States fears this will produce division in NATO and nuclear arms race among its members.

There is also the impact on the spirit of Western European Union itself, under which West German rearmament is integrated into NATO under controls, including a commitment not to produce nuclear weapons.

A strong display of nationalism, such as France's is bound to be felt in a structure which was

designed primarily to submerge such.

France, on the other hand, insists that the nuclear force would merely put her in the same position, with regard to the alliance, which Britain and the United States already occupy. She insists on an equal voice on whether nuclear weapons would be used in an emergency, and how. She points out that Britain and U. S. reservation of the right to supply and command NATO's nuclear deterrent in effect leaves two national forces just as France's would be a third.

A week ago the United States said reports that she had agreed to make NATO a nuclear power were not true or at least premature.

Since then the French General Assembly has approved the plan of French President Charles de Gaulle and President Eisenhower is reported considering a trip to Paris during the NATO meeting in December in support of an American poll offer.

France, in the last week, likewise has denied that her policy is in any way based on fear that the United States might eventually withdraw from Europe.

Job Interviews

The following firms will interview seniors on campus early next week:

Oct. 31
The Shell Oil Co. will hold interviews for majors in accounting, business administration, economics, and finance. The job openings are in the Financial Department in one of five Shell locations in Houston.

Nov. 1
Price Waterhouse and Co. will hold interviews for majors in accounting with BA and MA degree levels. The job openings are in public accounting with a large national firm in almost any part of the United States or South America.

Nov. 1
The American Oil Co., a subsidiary of the Standard Oil Co. of Indiana will hold interviews for majors in chemical engineering with BS, MS and PhD degree levels. They will also interview chemistry majors with MS and PhD degrees. The job openings are in research and development on petroleum and petrochemicals.

The American Co. will also have interviews for chemical engineering and chemistry majors. These will be only for graduate students including students who have completed their BS program by June 1961. The openings will be for summer work at both Texas City and Whiting, Ind.

The Dow Chemical Co. will interview chemical engineers and chemistry majors with BS, MS and PhD degree levels. They will also interview agricultural economics, agricultural engineering, industrial education, industrial engineering, and mechanical engineering majors. The job openings

for chemical engineering and chemistry majors will be production, research, development and design. Openings for other majors will be in technical sales and agricultural chemical sales.

Nov. 1
Texaco, Inc. will interview majors in the following fields for job openings: chemical engineering (B, M, D), civil engineering (B, M, D), electrical engineering (B, M, D), geology (B, M, D), geological engineering (B, M, D), geophysics (B, M, D), industrial engineering (BS), mechanical engineering (B, M, D), industrial engineering (BS), mechanical engineering (B, M, D), petroleum engineering (B, M, D), chemistry (B, M, D), mathematics (M, D), physical education (BS), economics (BS), and business administration (BBA).

Texaco, Inc. will hold interviews for summer employment for majors in chemical engineering, civil engineering, mechanical engineering, chemistry and mathematics. Requirements are students completing their junior year. They will also interview graduate students in chemistry and mathematics.

Nov. 1
The Copolymer Rubber Chemical Corp. will interview majors in the following courses for employment: chemical engineering and chemistry, BS, MS and PhD degree levels and electrical engineering and mechanical engineering, BS degree levels.

The Standard Oil Co. of Texas will interview majors in mechanical engineering and petroleum engineering with BS and MS degree levels for work with the Standard Oil Company of Texas.

The Texas Power and Light Co. will hold interviews for majors in electrical engineering with BS degree level for work in transmissions, generation, and sales.

Colombia: Land Of Promise In Agriculture and Industry

(Editor's note: This begins a series of articles on South American countries written by students on the campus representing their respective lands.

The preliminary article on Colombia was written by two students from that country, Alvaro Restrepo and Rafael Chagin. Restrepo is a freshman this year, and Chagin will graduate in 1962.

The series has been encouraged by the Pan American Club, where students from all over South America have united for social activities and services to the college. It is intended that each South American country be represented in the series.)

By ALVARO RESTREPO and RAFAEL CHAGIN
Colombia, the nearest South American country to the United States is an exciting vacationland located on the northernmost part of South America, east of the Panama Canal and west of the oil-rich country of Venezuela.

The country is essentially agricultural: it has plenty of beautiful and soil-rich valleys, abundant water and a great variety of climates.

The livestock industry is growing rapidly and it has been estimated the 66.2 million acres are devoted to this purpose. Coffee is the main agricultural product but the exploding increase in population and the decline in coffee prices have made the people to start relying on diversified type of agriculture.

A great number of facilities are given by the government to improve agriculture in every way. Each day, the Stockman's National Bank in Bogota and throughout the country assist many farm and ranchers who need capital to sow grain, to reap a harvest or to buy cattle.

There is plenty of uncultivated land, and this is most important part of all; you can get land without money; all you can fence. The government will allow you homestead land on the condition that you add improvements each year for twenty years.

The only difficulty for Colombians is that they lack the know-how or technical knowledge in all phases of agriculture. The expanding demand for consumer goods is slightly met because of primitive methods of production in agriculture. On the other hand, faces of the economy such as

petroleum, chemicals, textiles, fertilizers, mining, forestry and construction works encounter the same situation.

The total population of Colombia is 14 million, of what about 59 percent is of mixed European and Indian stock. 20 per cent pure European, 5 per cent pure negro and 2 per cent pure Indian.

Colombia has had a long and honored tradition of democratic liberalism smeared a few years ago by a dictatorship which lasted only three years.

Under the democratic administration of President Alberto Lleras the country is enjoying a relatively high level of prosperity.

Shades of Aladdin's lamp—the genie is back! And Esterbrook is the sorcerer that turned the trick... with the Esterbrook Classic fountain pen! It works magic with ink! Makes it write smoother... makes writing with it easy to read!

But that's not all! The Esterbrook Classic Fountain Pen offers you a choice of 32 points. Pick the point that suits you best and—presto!—begin writing the way you've always wanted to write!

Choose from as many colors as you'd find in an Arabian Street Scene... six in all! Put magic in your handwriting... with an Esterbrook Classic fountain pen!
