

Cattle Feedlots To Be Subject Of Meeting

Ruminant feedstuff carbohydrate analysis and some of its facts and fallacies will be described during the annual Texas Nutrition Conference here Oct. 4-6.

The principal speaker will be Dr. William Ellis, assistant professor in the Department of Animal Husbandry. His subject will be aimed at feed makers and beef cattle and sheep feeders.

The program this year will feature a section of talks focusing on beef cattle feedlots and feeding operations.

In addition to current systems of analysis and their faults, Ellis will discuss some possible improved methods of determining carbohydrates.

Dr. J. R. Couch, program chairman and professor in the Department of Poultry Science, said talks this year will emphasize applied nutrition and practicality.

Conference sponsors are the college, Texas Agricultural Experiment Station and Texas Agricultural Extension Service in cooperation with the Texas Grain and Feed Association and Midwest Feed Manufacturers Association.

Employment, Loan Service Both Available

Students who are worried about colleges expenses or extra cash should consider the possibility of working at a part-time job.

Many an Aggie has worked or is working his way through A&M.

The Office of Student Labor and Loans has jobs to fit every need. The executive type jobs consist of greasing cars, mowing lawns, or trimming hedges. The clerical jobs that are available consist of washing dishes in chemistry labs, waiting on tables at the MSC, or working in one of the mess halls.

The pay for most part-time jobs is commensurate with your ability as long as your ability is commensurate with the pay; however, it usually runs 75 cents an hour and up. Assignments to part time jobs are based on the student's need and sincerity of purpose.

Students who need part-time employment should file application with the student labor office. The type of job desired and the hours that are free in your class schedule should be noted on the application. Students are expected to maintain good scholastic standing to remain eligible for employment.

The Office of Student Labor and Loans also maintains a sizeable number of short-term, small loan funds. The Association of Former Students administers a series of loan funds which are available to any student who has been at A&M at least three semesters, and whose record in conduct and scholarship is satisfactory. The amount of the loan depends on the student's need. There are other loan funds which are available to all students also. Students needing extra cash can get information about such loans at the labor and loans office.

"Boards Replacing Glass"

Ellison's Drug Store at North Gate in College Station was hard hit by Carla's winds, which shattered two large picture windows, throwing glass inside and outside the store.

Elsewhere in College Station, traffic poles were knocked down, and several electric lines fell with the winds.

TRAIN PICTURE 60 YEARS OLD

Youth's Camera Interest Produce Railroad Picture

DENISON, Tex. (Spl)—That picture of a train, its brilliant headlight beaming, is on the wall of the Missouri-Kansas-Texas Hospital here because Montgomery Middleton got interested in cameras 60-odd years ago.

Middleton, better known as Gum, was living in Waxahachie, where his father published a weekly paper, when he decided he wanted a camera. That was in about 1900 and Gum was 12.

Gum decided to bypass all the dealers and write to the people who made the product. That's how Eastman Kodak got this letter:

"Gentlemen, I am the son of a

Nance To Head Faculty-Staff Club Committee

Dr. Joseph M. Nance will head the A&M Faculty-Staff Dinner Club committee for 1961-62.

He is also head of the Department of History and Government. He will be assisted by Willard P. Worley, co-chairman, and Dr. A. G. Caldwell, treasurer.

The group's first dinner-dance of the year will be held at 7:30 p.m. Sept. 28 in the Memorial Student Center ballroom.

Other members of the committee are Mrs. Gayland E. Bayliss, Dr. H. R. Crookshank, Prof. W. E. Eckles, Prof. K. E. Elmquist, Mrs. Anne Keel, Mrs. Russell Kohel, Mrs. Charles Richardson, Dr. L. R. Richardson, Maj. Benjamin F. Smith and Don Young.

"We are looking forward to another successful club year," Nance said.

man who prints the weekly Waxahachie Mirror and I, work in the print shop. I am interested in making pictures but as you know it is hard to buy a camera unless you have money. I will tell you what I will do, though, I will run some advertising for your firm in the Mirror if you will send me a camera. Your truly, Montgomery Middleton."

Shortly, a big camera with all the accessories arrived. With it a long advertising contract from Eastman.

Since that day, Gum Middleton has been devoted to the blending of graphic and photographic arts.

One of his earliest and best pictures was of that train, usually driven by the late Eugene Hoskins, who was known as the "Whistle Artist" all along the Katy line through Waxahachie, Denison and to St. Louis.

Agriculture Dean Patterson Attends NSF Conference

Dr. R. E. Patterson, dean of the School of Agriculture, is in Washington, D. C., this week attending a National Science Foundation conference.

Patterson is one of 30 administrators and scientists selected from major U.S. colleges and universities to talk with NSF during the final stages of development of the new programs.

The dean and other conference members will discuss new NSF programs of support for science instructional equipment included in the foundation's 1962 budget.

One day Gum shot some pictures of the old Katy Flyer rounding the bend. In his workshop he made a fancy frame for the enlargement, and designed a little light for the headlight.

Railroaders, especially those who worked for the Katy, tell for the picture. That's how it got to the railroad hospital.

But Gum for good measure made a replica for his own desk.

Middleton is now a member of the brother team that operates the Middleton Printing Co. Gum and his brother, Marcellus, have won national awards for the excellence of their products.

Engineering Safety Course Number Changed To '409'

The Department of Nuclear Engineering has announced that the course listed in the present college bulletin as Nuclear Engineering 609, "Radiological Safety," will be offered this semester as Nuclear Engineering 409.

This course is still approved for graduate credit but has reportedly undergone some simplification to make it available to a larger group of students.

The course consists of lectures and demonstrations concerning the interaction of radiations with matter and especially with biological systems. Special emphasis is given the theory and practice of radiation detection and shielding as applied to radiation protection. The biological and physical basis for radiation safety standards are also discussed.

Australian Teacher Stationed At A&M

Dr. Herbert George Osborne, Reader (teacher) in Veterinary Medicine, University of Queensland, Australia, has arrived here for a nine-month stay with the School of Veterinary Medicine.

The veterinarian is one of 50 foreign lecturers and students who will study and teach at various land-grant schools in the United States. All will travel on Fulbright grants. Osborne is assigned to A&M.

He also will participate in Land-Grant Centennial observances. On Sept. 6-8, the doctor was at Sarah Lawrence College, N. Y., to hear discussions on aspects of higher education unique to this country.

He heard discussions on the land-grant system Sept. 9-13 at Strafford, Vt., home of Justin Smith Morrill, author of the land-grant act of 1862. And on Nov. 12-16 in Kansas City, he will attend the annual meeting of the Association of Land Grant Colleges and State Universities.

Dr. A. A. Price, dean of the School of Veterinary Medicine, said the centennial discussions and assignments at land-grant schools will give Osborne and the other visitors the opportunity to observe the land-grant idea in action and its relevance to needs of higher education in other countries.

While at A&M, Osborne will teach and conduct research in the Department of Veterinary Public Health.

From 1951 through 1955, Osborne conducted private practice with sheep and beef cattle. He has developed extensive cattle and sheep practice within the University Medical School, which serves as field practice for students. He has been with the University of Queensland since 1956.

The veterinarian is the author of numerous technical publications. The most recent are "A Quantitative Method of Record Analysis

to Determine the Role of Infective and Nutritional Factors in Beef Cattle Infertility Syndrome," "The Manual Examination of Rams for Fertility and Its Relation To Lambing Percentages," and "The Role of Pregnancy Diagnosis in Beef Cattle Management."
