

Architect Seminar Set March 22-23

Latest developments in the field of building design research will be highlighted at a seminar here for architects March 22-23.

Emphasizing "Creative Architecture Through Research," the meeting will cover how research results in construction progress and creativity in design. Ben H. Evans, Conference chairman and coordinator of architecture for the Texas Engineering Experiment Station said.

Sponsoring the meeting is the Texas Society of Architects with A&M and the Building Research Institute.

Speakers for the conference will include Carl Koch of Cambridge, Mass.; Jonathan King of Educational Facilities Laboratories, Inc., New York City; Willard Strode, University of Kansas; Lawrence Buck Winn of Wimberly, Texas; William W. Caudill of Houston; J. W. Griffith of Dallas; James H. Marsh and Matthew Nowak of A&M and T. J. Nugent, University of Illinois, Champaign.

Koch is an authority on prefabricated components and multi-family housing; King will discuss edu-

cational facilities; Strode has specialized in hyperbolic paraboloids, and Buck Winn, artist-lecturer and inventor has developed a way for architects to produce "sculptured" buildings.

Caudill, chairman of the Rice University architecture school, is a strong advocate of architectural research programs; J. W. Griffith, professor of industrial engineering at Southern Methodist University will discuss economic analysis of building designs, and T. J. Nugent, director of the Rehabilitation Center at Illinois will discuss building design for handicapped people.

TTI Experiments For Safe Highways

The Texas Transportation Institute is experimenting with colored pavement, tire noise, and reflectivity to improve the safety and efficiency of highway channelization.

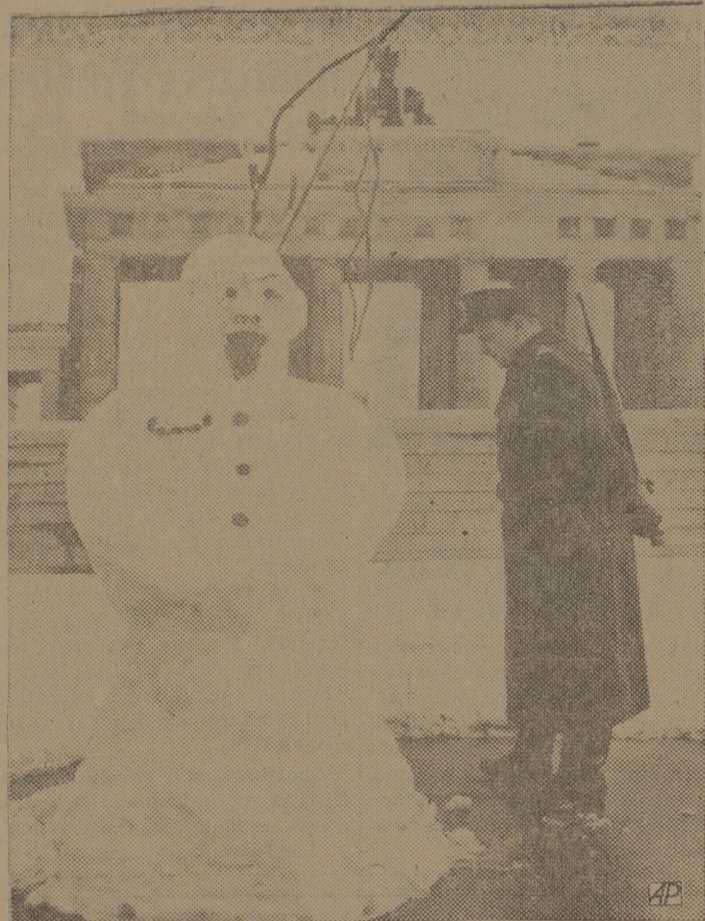

Neil Rowan, project supervisor, said that many accidents are caused by failure to see highway markings in danger zones. To remove this danger, TTI has three installations for testing practical application of safety features in Bryan, Houston, and Waco.

Colored pavement will be used in the approach to a danger area to warn the driver. Large stones or rumble strips will be used to produce a tire noise to warn the driver; and new lane markers, buttons, and paint will be used to route traffic around islands.

Groneman Authors Journal Article

C. H. Groneman, head of the Department of Industrial Education, authored an article which recently appeared in the spring issue of the Educational Journal for the California Council of Industrial Arts Teacher Educators.

His article pertained to methods of preparing manuscript materials for magazines and book publication firms.

Forestry Awards To Be Presented

For the 10th consecutive year the Texas Forest Service is offering two fellowships in forestry at the graduate level, John Haislet, head of the Service Education Division, said today.

Study areas of the fellowships will be in forest genetics and forest physiology, Haislet said.

These fellowships are available for a 12-month period starting Sept. 1, 1962, and may be renewed for an additional year. Haislet said both fellowships consisted of either a \$2850 stipend for out-of-state students or a \$2400 stipend for resident students. Funds for these fellowships are contributed by the forest products industries.

Seminar Set For Summer By Data Center

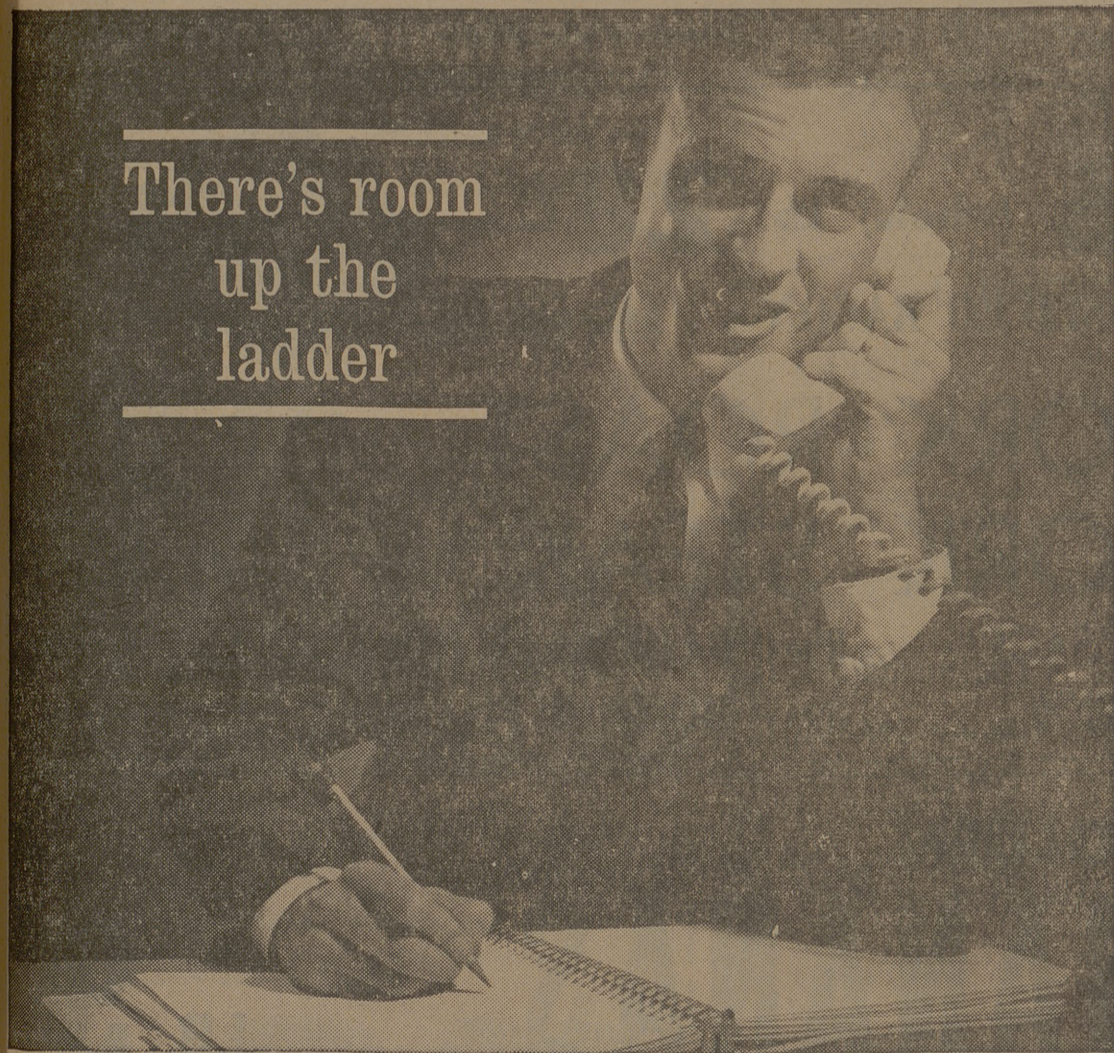

The Data Processing Center will sponsor a seminar for 30 college teachers and advanced graduate students on Computer Programming from July 16 through Aug. 24, according to B. C. Moore, director of the seminar and associate professor of mathematics. Moore is also an associate research mathematician in the Engineering Experiment Station.

The National Science Foundation will pay the tuition and fees. Participants will be paid \$75 to \$100 per week depending on professional backgrounds.

Applications forms may be obtained from C. M. Loyd, associate director of the seminar.

An invitation to shape your own future...

There's room up the ladder

Opportunities for advancement at General Telephone are particularly promising because communications is one of the nation's highest-ranking growth industries.

To help you grow with the company, the General Telephone System provides planned training programs, and encourages and aids an individual in self-development.

Many college graduates have earned early advancements with General Telephone within

the areas of their own interests and attributes.

If you majored in Engineering, Mathematics, Physics, Business Administration, the Liberal Arts or the Social Sciences, then there are many fine opportunities in numerous locations where you can count on a management career.

We invite you to explore your own possibilities at General Telephone. As a start, ask your Placement Director for a copy of our brochure.

Employment Opportunities:
The General Telephone Company of So. West has many employment opportunities for College-trained people. Contact your Placement Office for full information.
