

English Botanist Will Speak Here Thursday Night

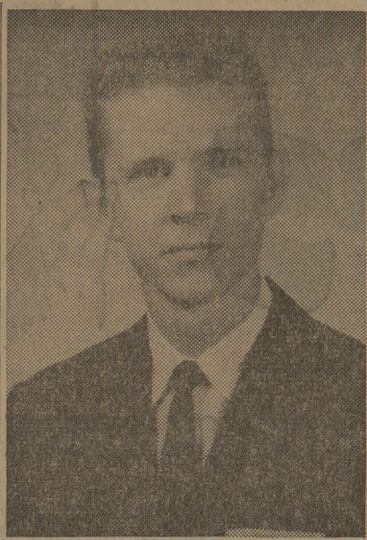

Dr. Leslie John Audus, professor of botany at Bedford College, University of London, will give a graduate lecture on "Studies in the Growth of plants" Thursday at 8 p.m. in the Biological Science Lecture Room.

With special reference to the action of photohormones, Audus' special interest is in plant physiology.

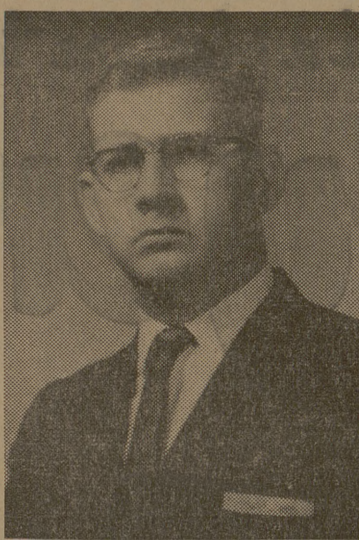

Born in Isleham, England, Audus holds the degrees of M. A. and Ph. D. in botany from Cambridge University. Audus was on the faculty of the University of Wales before becoming professor of botany at Bedford College, University of London.

Audus is visiting A&M as a guest of the National Science Foundation's Academic Year Institute for Junior High School Teachers. He will address this group at a luncheon to be held at the Western Motel Restaurant Friday.

Plans are being made for him to meet the A&M faculty in plant physiology.

DON WHITEHALL

LARRY BRAIDFOOT

Two Baptist Students Win Mission Posts For Summer

Two Baptist students from A&M will participate in summer missions projects this summer, Dr. Cliff Harris of the Baptist Student Union here, has announced.

Representing the A&M BSU will be Larry Braidfoot and Don Whitehall.

Braidfoot, a junior animal science major from Estelline, will work in Alaska. Whitehall, a senior industrial education student from Houston, is scheduled to work in Pakistan.

After arriving at his mission field, June 10, Braidfoot will assist in vacation Bible school work and in other youth activities in the areas of Kenai, Valdez, Fort Yukon and Fairbanks. He is scheduled to return August 23.

Whitehall, along with an out-of-state student, will work among English-speaking Pakistani students. They will arrive in Decca, the country's capitol, on June 14 and depart for the U. S. on August 20.

The assistant civilian chaplain, Whitehall is chairman of the Christian life committee of the BSU. Braidfoot has been elected president of the BSU and editor of The A&M Agriculturist for 1963-64.

Harris Takes New Position In Houston

Dr. Cliff Harris, director of the Baptist Student Union since 1952, has resigned to join the faculty of the new Houston Baptist College in June.

The Texas Baptist institution will open this fall. Harris will be an associate professor with both teaching and administrative duties.

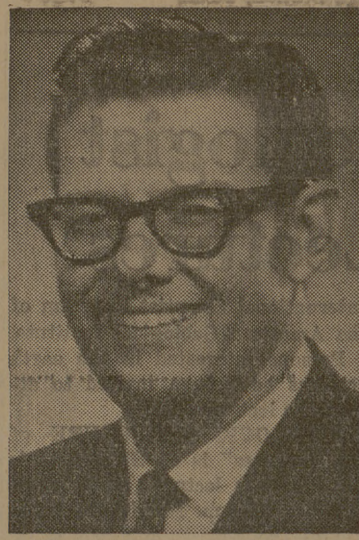

As director of Baptist student work, Harris has been employed by the Division of Student Work of the Christian Education Commission, Baptist General Convention of Texas.

Harris holds both the B.S. and Master of Education degrees from A&M and the Doctor of Education degree from George Peabody College, Nashville, Tenn. He was the recipient of a Danforth Foundation Campus Christian Worker Study Grant in 1958-59 while on leave of absence from A&M.

He will conduct a party to the Sixth Baptist Youth World Conference meeting in Beirut, Lebanon, in July, followed by a tour of the Bible lands and major points in Europe.

Harris' articles have appeared in religious publications and he has participated in Religious Emphasis Weeks and student conference on campuses of the Southwest.

Harris is also a major in the Army reserve, serving as a public information officer.

DR. CLIFF HARRIS

Indian Physicist To Lecture Next Week

A physics professor from Muslim University at Aligarh, India, Dr. P. S. Gill, will lecture here next week.

He will also hold informal meetings with students and faculty while visiting the campus under the auspices of the American Association of Physics Teachers and the American Institute of Physics.

Gill's visit is part of a broad, nationwide program to stimulate interest in physics and the program is conducted with the support of the National Science Foundation. J. G. Potter, head of the Department of Physics, has charge of arrangements for Gill's visit.

GILL WAS born in India, received the A.B. and M.S. degrees from the University of Southern California and the Ph.D. degree from the University of Chicago.

He has been professor of physics and head of the department at the Muslim University since 1949. He also holds the position of director of the Gulmarg Research Observatory and honors professor of physics at the University of Jammu and Kashmir. Recently he was appointed director of the Central Scientific Organization of the Indian Council of Scientific and Industrial Research.

The physicist is a Fellow of the American Physical Society, the National Institute of Sciences of India, the National Academy of Sciences of India, and the Indian Physical Society. He is a former president of several organizations and has received other professional honors.

Church Of Christ Accepting Entries For Speech Contest

Applications for the fourth annual Montgomery speech contest are being accepted at the Church of Christ bible chair.

The contest is open to all students on the Church of Christ reference list or to those who take religious courses at the chair. The speeches will be made at 7 p.m. next Friday.

The contest was originated in 1959 by Ed Montgomery, a Houston dentist. The purpose was to create a special interest in student's public leadership abilities.

Prizes for the contest are first place, \$20; second place, \$10; third place, \$10; and fourth place, \$5.

Topics for the ten-minute speeches may be selected by the student with the approval of Bill Williams, the bible chair director.

Applications may be made at the bible chair.

IN NEW BOOK

Prof Studying Lost Language

Dr. Jack A. Dabbs of the Department of Modern Languages is the author of a newly-published book, "History of the Discovery and Exploration of Chinese Turkestan."

The book is the story of travelers through the ages who have visited the vast province of Chinese Turkestan, often called Sinkiang. This province is in western China and bounded in part by Siberia.

DABBS, AN experienced Asian traveller, became interested especially in the remote area because of a "lost language," Tocharian. Between 1893 and 1914 scraps of documents came to light containing the language, no longer spoken. It is one of the major mysteries of linguistics science.

Dabbs studied the forgotten language in Berlin, where manuscripts were preserved in museums, and visited almost every other museum with fragments of the language. He visited not only Berlin but also India House in London, the Bibliotheque Nationale in Paris and the Museum of Central Asian Antiquities in New Delhi.

"SOME OF the chief problems in this study," Dabbs said, "were the collection of accounts and the identification of place names." Immediate past president of the American Name Society, Dabbs believes the Chinese Turkestan area is the most difficult and complex part of the world for the identification of place names.

'63-64 MSC Room Requests Will Be Accepted In May

Requests for rooms in the Memorial Student Center during 1963-64 weekends will be accepted from students and former students during May, according to Mrs. Mozelle Holland, guest rooms manager of the MSC.

Most requests will be for football weekends and other "major event" weekends, Mrs. Holland said.

Only one room for each family can be reserved for each weekend, she said. Reservations will not be transferable.

Following the May 31 deadline, a drawing will be held to determine who will receive accommodations.

After the drawing, notices will be mailed to each person submitting requests for guest room reservations indicating whether or not their names were drawn.

Requests not drawn will be placed on a waiting list and persons on this list will be notified at least two weeks before a weekend if a room becomes available for them, Mrs. Holland said.

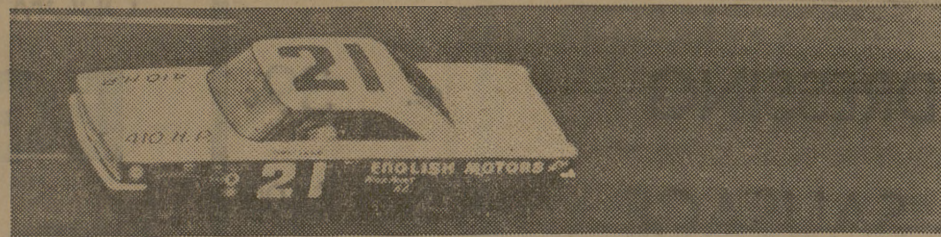

A deposit will be required of those persons receiving a reservation, she added. Unless this deposit is received no later than two weeks before the weekend, an automatic cancellation will be made.

Sausage-Making Institute Meets Here Friday, Saturday

A&M and the Texas and Southwestern Meat Packers Association will sponsor a Sausage-Making Institute here Friday and Saturday. Ed Uvacek, livestock marketing specialist with the Texas Agricultural Extension Service, said the session will cover many phases of sausage demand, consumer preferences, quality control, ingredient control and analysis of costs of production.

A board of directors meeting of the Texas and Southwestern Meat Packers Association also will be held during the institute. Uvacek said registration will be held Friday morning on the second floor of the Animal Industries Building. The program will start at 1:15 p.m. Friday in that building's meats laboratory.

How Ford economy won for Tiny Lund at Daytona

The Daytona 500 is one of America's toughest stock car events. It measures the toughness, stability, over-all performance and economy characteristics of the cars that take up its challenge—in a way that compresses years of driving punishment into 500 blazing miles. This year mechanical failures claimed over 50 per cent of the cars that entered. That's why Tiny Lund's victory in a Ford (with four other Fords right behind him) is a remarkable testimony to sheer engineering excellence.

Lund attributed his victory in part to the "missing pit stop." He made one less pit stop for fuel than his competition—proving that Ford economy can pay off in some fairly unlikely situations!

Economy and the winner of the Daytona 500 might sound like odd bedfellows at first. Yet economy is basic in every car we make . . . yes, even the Thunderbird is an economy car in its own way. Here's what we mean . . .

Economy is the measure of service and satisfaction the customer receives in relation to the price he pays for it. It does not mean, however, austerity . . . you have taught us this. Americans want—and we try hard to give them—cars that are comfortable to ride in, fun to drive, and powerful enough to get out of their own way. Not many Americans want to settle for basic transportation. You see this in our sales figures—more than half of our 1963 sales are coming from the top of each model line. We're selling convertibles, hardtops, the jazzy cars . . . the bucket-seat, high-performance, luxury editions are going like hot cakes.

Yet for all the fun that people are demanding in their cars, they still are

very conscious of the element of thrift—of avoiding unnecessary expense. This is the kind of economy we build into every car from the compact Falcon to the luxurious Thunderbird.

There's a special economy, for instance, in Ford's freedom from service. Every car and virtually every wagon can travel 36,000 miles before it needs a major chassis lubrication. Other routine service has been reduced, too—because these Fords are simply built better—and of better materials—than ever before.

In its own elegant way, even the Thunderbird gives you economy. It will travel 100,000 miles or 3 years before you have to lubricate the chassis. Thunderbirds have a way of becoming classics—as a look at their remarkably high resale value will quickly tell you. This, too, is economy.

Once, long ago—before the arrival of the Income Tax—a wealthy lady was asked to comment on the solid gold plumbing of her latest villa at Newport. "So thrifty, my dear," said the dowager . . . "it will never, ever rust."

Economy then, is many things to many people. Whatever economy means to you, you're pretty sure to find it in a Ford.

America's liveliest, most care-free cars!
