

Architecture Pair Plans London Trip For Work, Study

Two A&M architecture students will begin work in England this summer to supplement training received here.

Lloyd E. Kleypas of Temple, who will complete the five-year course this summer, plans to leave around August 1 and spend about a year in London.

Charles Frith of Shreveport, La., will leave for London at the end of the first summer session and plans to return in the fall for his last year of study.

The two men said arrangements were made for their work by David G. Woodcock, visiting Fulbright professor in the Division of Architecture. Woodcock, a resident of Manchester, England, joined the division faculty in September.

The two students will work for separate firms of chartered architects in London. Frith said they will probably live with English

Kleypas said he will also go to school during his stay and that he plans to take a two-month tour of Europe before returning to enter graduate school here.

Frith said that he plans only to work while in England but added that he was going to schedule enough time to spend one week in Paris before returning.

Both men look forward to being able to "experience first-hand all the European architecture."

A Spot Of Tea

A&M architecture students Charles Frith, left, and Lloyd Kleypas get used to teacups and umbrellas they expect to use while working in London this summer.

BY THIS WEEKEND Parking Lot Work To Be Completed

Asphalt surfacing and other improvements to four parking lots on the A&M campus are scheduled for completion by this weekend. The parking areas handle 235 cars.

Bryan contractor R. B. Butler is doing the work under a \$28,270 contract.

Parking improvements at A&M are financed from proceeds of automobile registration fees paid by students, faculty and staff. The work nearing completion represents the major project financially possible this year.

To be improved under a separate, new contract for \$6,527 is the drive and service area of the new Architecture Building. The A&M Board of Directors awarded this contract to Butler. This work is expected to start in July with completion scheduled in 30 working days.

Largest of the four newly-surfaced areas is located north of the Agricultural Engineering Building and west of the Architecture Building. This lot with a capacity of 110 cars has 3,700 square yards of asphalt surface, 230 square yards of concrete paving, 630 linear feet

of curb and gutter, and 150 linear feet of curb.

Other parking areas completed or hearing completion and their approximate capacities are: Soils Testing Laboratory area, including the Physiology of Reproduction, Anaplasmosis and Wool and Mohair Laboratories, 50 cars; Chemistry-Francis Hall area, 60 cars; and M. E. Shop Drive, an extension of Ireland Street, 15 cars.

The four newly-improved parking areas have nearly 10,000 square yards of asphalt surfacing, 375 square yards of concrete paving, 850 linear feet of curb and gutter, and 180 linear feet of curb.

Brazilians Leave After 10-Day A&M Livestock Program

Nineteen Brazilians ended a 10-day livestock study visit to A&M early this week.

Eleven of the visitors were beef cattlemen and the others were interested in swine.

Bill Swindle of A&M's Office of International Programs said the group was here to study breeding, management, forage production, feeding, marketing and other aspects of beef and pork production.

The visitors were farmers, ranchers, veterinarians, government and professional men.

The beef group left Tuesday for the Texas Agricultural Experiment Station at McGregor before moving on to cattle production areas in Northwest Texas. The swine group left Wednesday for North Carolina State College.

A government animal scientist, Marcelo Mendes, is leader of the swine group. Dr. M. F. Nunes, a rancher, heads the cattlemen.

Swindle said the Brazilians' trip is being sponsored by the U. S. Agency for International Development in cooperation with the U. S. Department of Agriculture and land grant college and university systems.

Grant Given For Work On Cotton Fiber

A&M has received a U. S. Department of Agriculture grant of \$83,138 to study effects of environmental conditions on cotton fiber quality.

The grant contract is between the USDA and the Texas Agricultural Experiment Station.

Research on the project will be conducted by the Department of Plant Sciences, Dr. David Rosberg, department head, said. Project supervisor is Dr. Howard Joham.

Rosberg said such factors as light, temperature, water and humidity will be studied in relation to cotton fiber. Facilities in A&M's new Plant Sciences building will be utilized in the experiments.

Summer Fun

Dancers enjoy the music of a live band provided by the Memorial Student Center Summer Directorate Monday night. The dance also featured a \$5.00 door prize. The MSC has scheduled similar Monday night parties for the rest of summer school.

Monday Dance To Feature Stereo Music, Door Prize

The Memorial Student Center's regular Monday night dance will feature music by stereo recording next week.

Paul Smith, summer dance committee publicity chairman said Wednesday that admission will be 50 cents, stag or drag, and that stag girls will again be admitted free.

Another \$5.00 door prize has been provided by Loupot's Trading

Post. The dance is scheduled for 8-11 p.m. in the MSC Ballroom.

Smith said that last Monday's dance, which featured live music by The Paradons, had a large turnout.

He described the affair as a financial success and said the committee will probably be able to continue the weekly dances if similar crowds attend each time.
