

NSF Coordinator Ends India Trip

Coleman M. Loyd, coordinator of National Science Foundation programs at A&M University, has returned from India where he served as an educational science consultant.

At the University of Gujarat, Loyd spent the summer with 43 physics and chemistry teachers from four different states of India.

Now back in College Station and 17 pounds lighter, Loyd admits that his greatest "adjustment" in India was the food, not the language.

"Even the students, coming from different parts of India, had trouble agreeing on a uniform menu," the part-time physics professor said with a grin. "We hired a cook but set aside one day each week to counsel him and present our complaints."

For those familiar with America's high speed traffic, Loyd said

India's urban transportation problems offer quite a contrast.

"The traffic officer stands on a box in the middle of the street," Loyd said, "and at the proper time, he blows a whistle and the camels cross the intersection."

Loyd's tongue-in-cheek report on the food situation was followed with more serious descriptions of India's struggles with a growing population.

"Many people slept wherever they found space, along the super highways or in the streets," the professor commented.

Loyd was one of 32 American teachers selected for the AID program, directed by Columbia University. They conducted 16 summer institutes for secondary school teachers.

Mrs. Loyd accompanied her husband.

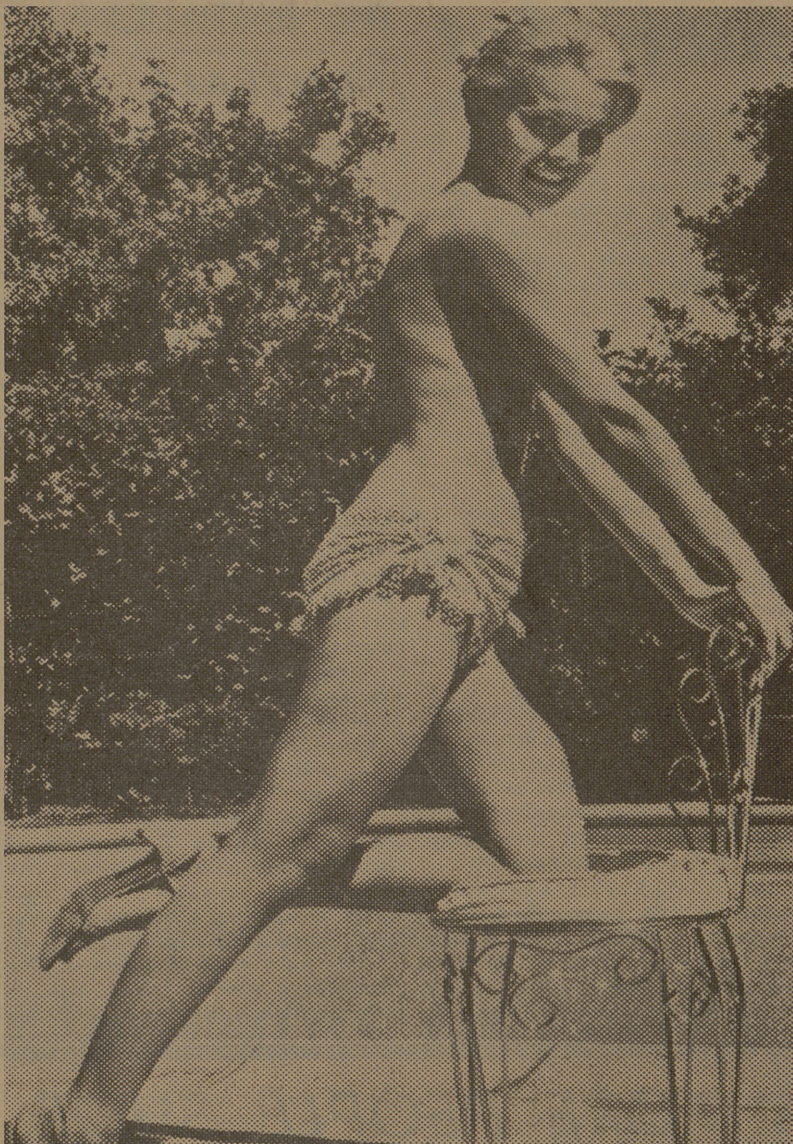

Regarding the language barrier, Loyd stuck with English with no difficulty.

Lebanon Student Receives Grant

A&M's Department of Petroleum Engineering has received a \$2,400 grant from Cities Services Research and Development Company.

The fellowship will be awarded Issam S. Bousaid of Beirut, Lebanon, a Ph.D. student at A&M. His research concerns "Computations Related to Fluid Properties."

Announcement of the grant was made by Stanley M. Pler, fellowships coordinator for Cities Services.

No Straps

Disdaining the wearing of the so-called topless swim suits whose straps leave sunburn shoulder streaks, actress Carroll Baker has designed a pair of lacy trunks with small embroidered roses around the edge for her personal use. Carroll is currently making "Sylvia," and the scrip calls for her to wear a topless bathing suit—she agreed provided she could design her own. (AP Wirephoto)

Education, Psychology Adds New Professor

Dr. Robert S. Randall will join the Department of Education and Psychology faculty in September as an assistant professor, Dr. Paul Hensarling, department head, announced.

Randall comes to A&M from the University of Texas where he has held an instructorship in mathematics while completing the Ph.D. degree in educational administration and mathematics.

He has served as a principal in the San Antonio and Fort Hancock school systems and has taught mathematics in the Austin and Norton schools.

Randall will teach courses in the area of school principalship and develop and direct field work and supervise interns in school administration throughout the state, Hensarling said.

The new faculty member's research activities have related to the problem attack process in educational administration. He has developed a means of testing this process in the behavior of high school principals and is the author of several major publications.

Dr. W. W. Williams, retired A&M University official, has been named an Honorary Fellow of the American Society of Animal Science.

The honor came during the organization's recent 56th annual meeting in Knoxville, Tenn.

The widely known educator was head of the Department of Animal Husbandry from 1923 to 1943; vice chancellor for agriculture, 1943 to 1956; and acting president of the

university in 1957.

He was senior agricultural advisor to the chancellor of the University of Ceylon from 1958 to 1961.

E. P. Creech, who spent eight years overseas as an agricultural adviser, has been named to the Office of International Programs staff at A&M University, Dr. Jack D. Gray, director, announced.

Creech, a 1947 graduate of A&M, will serve as programs coordinator and foreign training advisor. He received a master's degree at A&M in 1954.

His overseas experience includes two years in India, one year in Burma and five years in East Pakistan, including two years as deputy chief of the A&M staff there.

In addition, Creech has eight years experience in agricultural education in Texas.

Danny R. Tidwell and Harry J. Sweet, both research engineers at A&M University, have been named assistant professors of aerospace engineering, Prof. A. E. Cronk, department head, announced.

Sweet, former assistant research engineer for A&M's Space Technology Division, received both master's and bachelor's degrees from A&M.

For four years, Sweet served as a structures engineer for General Dynamics Corp. of Fort Worth and earlier was an instructor and graduate assistant instructor in A&M's Department of Mechanical Engineering.

Tidwell also received his undergraduate degree and master's from A&M. He is currently working toward a Ph.D. in aerospace structural mechanics.

Tidwell's professional experience also includes work as an associate engineer for Convair in Fort Worth and a year as an aeronautical engineer with the U. S. Air Force in San Antonio.

George Darroch whose experience includes more than a decade as a statistical consultant has joined the Institute of Statistics as an assistant professor, Dr. H. O. Hartley, institute director, announced.

Darroch has served since 1958 as principal statistician for the experimental station of the Hawaiian Sugar Planters Association and as consultant for the Pineapple Research Institute. Earlier he was experiment stations statistician at the State College of Washington.

This fall he will teach an undergraduate statistics course primarily for agricultural students. Darroch also will join the group of statisticians in the Institute of Statistics who currently consult with the Texas Transportation Institute and he will act, under a half-time appointment, as liaison officer between the two institutes.

Darroch is the author of numerous articles and lists membership in the Biometric Society, American Statistical Association and the American Society of Quality Control.

Grant Given To Continue Fungus Study

A \$7,132 research grant to help combat a fungus parasite occurring in oysters has been awarded Dr. Sammy M. Ray, director of A&M University's Marine Laboratory at Galveston.

The U. S. Public Health Service for the third consecutive year has approved Ray's research requests to investigate "Effects of Antibiotics on Fungus Parasites in Oysters."

An assistant professor of oceanography, Ray will study the geographical and seasonal distribution of the parasite, *Dermocystidium marnium*.

The additional grant will support studies on antibiotics that have indicated promise for laboratory control of the oyster parasite, Ray said.

The fungus parasite is the cause of considerable mortality to oysters in warm seasons in relatively high salinity ocean areas, he added.

ARE ALL GREAT CHEFS TEMPERAMENTAL?

We can't really say if they're all temperamental... but we know about the chef at Ramada Inn! His disposition is so miserable... his voice so loud and abusive — if his food wasn't so spectacular he'd be out of work tomorrow! Temperamental isn't the word for him. But the way he prepares a steak! Easily angered! Salads like you've dreamed off! Mean and sassy? Well, we didn't hire him because he was a nice guy.
