Brave New World Arrives At A&M

A&M means many things to many people. But to its students this institution is beginning to become an autocratic, inhuman, computer-run Big Brother

which sees all, knows all and does little. To use a public relations term—its upwards communi-

cations are stagnant and negligent.

With the addition of data processing, nuclear engineering and a proposed space laboratory the scope of A&M's research has completely outrun the average student's ability to know and feel a part of what's being done on his own

There was once a time when students knew almost everyone here. Those days are permanently gone. There was once a time when A&M was a way of thinking—when professors considered each student as an individual. Now Aggies are numbers on a punch card. Not a face but a chair number—not a human being with individual problems but a sta-

Orders and policy changes are sent down through a welloiled chain of command with nary a moment's thought to their eventual impression upon the lowly student. If he has a question to ask it is always directed at "Them".

And questions to "Them" nearly always meet with the same answer, "The order came from above and I only follow orders." Not ALL orders come from the ambiguous hierarchy but it is the most convenient excuse to get rid of those who dare to fight the machine.

Emphasis on growth is the main villian in the "New Deal." Misunderstanding, confusion and apprehension are all a part of any expanding organization, but they can be minimized if the human factor is considered.

- Sound Off —

The Battalion:

On this beautiful Monday morning, my thoughts concerning last ball games. Saturday night's alleged football have mellowed somewhat. Howmake the suggestion that A&M cease beating around the bush and apply for admission in the Lone Star Coonference. On second thought, we might have trouble getting in there-Texas A&I has scored 109 points against their opponent's 21 in four games and they might demand that A&M prove their offensive potential first, which would obviate our entrance.

As an eighteen year observer of A&M football teams, I have great difficulty remembering A&M varsity backs running into each other on offensive plays or A&M linebackers waiting for the ball carrier to get to them. I do remember a 1954 Aggie team that was out-manned, and out-"abilitied" but definitely in every ball game but their first one, because they were not out-coached. They were a pretty belligerent

In any event, it has become have given up competing in the subject of speaking and whipping Conference" since Coach Bryant heeded "mother's call' and have

now adopted a policy of nonviolence; an admirable policy, except that it wins very few foot-

If the "older and wiser" (used contest between A&M and U.S.C. advisedly) former students and school officials wish to form a ever, I still feel constrained to 25 year alliance, a la Jess Neely and Rice, with our present coaching staff, the least they can do is to get A&M in a conference on a par with the caliber of football trical engineering, mechanical enplayed by the head coach's former team, Wichita.

The Battalion: This letter is written on the subject of non-regs greeting and whipping out to Corps members. In my three years at A&M I have found that non-regs will

generally speak and whip outif you will take the initiative. Tonight I had an experience not calculated to encourage me, or any other student, in taking that initiative. While approaching the post office after evening chow at Sbisa, I whipped out a non-reg who responded by stroving his hands into his pockets

and saying "okay." This sort of reaction can hardly fail to bring about rather strained increasingly apparent that we Corps-non-reg relations on the "Texas and The Seven Dwarfs out, at least in so far as I am

Engineers and scientists at Boeing work in small groups, under supervisors

Boeing's world leadership in the jet transport field is an indication of the calibre of people you'd work with at Boeing. The forward-striding attitude responsible for this leadership has, since 1916, provided a steady succession of pioneering achievements: first twin-engine, retractable-gear, low-wing, all-metal airliner; first four-engine, pressurized airliner; first modern, high performance bomber; first large swept-wing, multi-jet bomber; and, of course, America's first jetliner, the 707, and the 720 and three-jet 727. (Right now we're designing a variable-sweep wing supersonic transport.) Boeing is one of the nation's major manufacturers of heavy transport helicopters (Vertol), and for more than two decades has pioneered most of the world's applications of the small gas turbine in aircraft, industrial, marine

And the space age? Boeing's contributions here include major contract responsibility for the Minuteman ICBM and NASA's Saturn V Booster — the launch vehicle destined to send America's first lunar landing team to the moon. We're also working full blast in all other phases of space flight, including a manned earth-orbiting laboratory and a lunar orbiter.

Projects underway in Boeing's extensive Scientific Research Laboratories encompass basic and applied research in celestial mechanics, solid state

Engineers and scientists at Boeing work in small groups, under supervisors picked for ability to inspire and promote the ideas of their associates. Individual initiative and ability get plenty of exposure that way. (The company encourages graduate studies at leading colleges and universities near Boeing installations.) Boeing is an equal opportunity employer.

We're planning to interview engineering and science seniors and graduate students on campus on the date listed below. So drop in at your campus placement office and arrange an appointment. We'll be looking forward to

Monday and Tuesday — October 26 and 27
