### The first car at the bottom of the world.

The Australian National Research Expedition really had no choice.

They wanted a car that "any member of the party could hop into and drive off without a moment's hesitation.' And the Volkswagen just happens to

fill the bill. The big trick is the VW's air-cooled rear engine. It has no radiator. It uses no

water or antifreeze. It just goes. (Antarctica #1 stood for days in 50° below zero weather and started without

The rear engine gave the VW so

much extra traction it climbed "straight up and down the slopes." (But they cheated a little; sometimes they put chains on the back wheels.)

Another reason the VW went where even the dogs wouldn't is the sealed bottom. It took an awful beating, but that's what it's there for: To protect the works inside against the weather outside.

The conditions got so fierce that one man said, "Now we know what it'll be like when Hell freezes over.

So if it ever does, you know what car

Gary stood at the window this morning waving and hugging the little plush dog I brought him home from my trip. How easy it is to make a small boy happy. I love to bring him things and take him places and watch the wonder and delight glow on his face, sparkle in his big blue eyes. Right

It won't be this easy always. I know that as Gary grows so will his desires and the scope of his delights. I won't be

able to supply his every wish or stand between him and the disappointments that come to every boy. But as friend and

father I do hope to share with him the principles that have sustained me in discouragement, augmented my joy. These truths I learned from God and my Church and I know of no better way to insure for my son a life of peace and fulfillment
