

'Big Mo' Considered Best All-Around Aggie Football Player

TOPS IN FOOTBALL
... Maurice (Big Mo) Moorman top Aggie football prospect.

The best all-around football player in the Texas A&M camp this spring is a young giant who has yet to play a down of collegiate varsity football.

He is Maurice (Mo) Moorman, a six-foot, five-inch, 248-pound Kentuckian who'll be 22 on June 24. Primarily an offensive tackle, he's also being used at middle guard on defense and likely will be one of the few Aggies to see two-way duty next fall.

Moorman was a three-year regular, playing both offensive and defensive tackle, at St. Xavier High in Louisville, Ky. He was all-state three years and high school All-America two years.

He played freshman football at the University of Kentucky, spent one semester at the University of Louisville and then transferred to Texas A&M last summer.

Moorman has great body balance and quickness for his size. One reason being that he has short legs and a long torso. He wears 36-33 trousers and an 18-35 shirt size.

Moorman credits his high school coach, Johnny Meihaus, with teaching him a lot about football but adds that A&M's Bud Moore, who was on the Kentucky staff when Mo was a freshman there, "has taught me so very many things about football."

He prefers playing both ways in football because "I just like to play." If he were limited to one choice he'd pick defense.

He doesn't think he's had a good spring, especially on offense. "I'm not as good a blocker as I should be. I haven't improved the way I think I should have."

The pros already are drooling over him, but he contends he'll play two years at A&M before signing, even though he'll be eligible to sign after next season. "If they want me after next year, I think they'll still want me after a second season at A&M."

The pros likely will shell out a lot of money to Mo. And, he'll know what to do with it. You see, his older brother, Dennis, has a master's degree in finance and is a stock broker in Louisville. He can offer sound monetary advice.

Here are 7 knotty problems facing the Air Force: can you help us solve one?

6. Space propulsion. As our space flights cover greater and greater distances, propulsion—more than anything else—will become the limiting factor. New fuels and new propulsion techniques must be found, if we are to keep on exploring the mysteries of space. And it may well be an Air Force scientist on his first assignment who makes the big breakthrough!

7. Pilot performance. Important tests must still be made to determine how the pilots of manned aerospacecraft will react to long periods away from the earth. Of course not every new Air Force officer becomes involved in research and development right away. But where the most exciting advances are taking place, young Air Force scientists, administrators, pilots, and engineers are on the scene.

1. Repairs in space. If something goes wrong with a vehicle in orbit, how can it be fixed? Answers must be found, if large-scale space operations are to become a reality. For this and other assignments Air Force scientists and engineers will be called on to answer in the next few years, we need the best brains available.

4. Space orientation. The orbital problems of a spacecraft, including its ability to maneuver over selected points on the earth, are of vital importance to the military utilization of space. There are plenty of assignments for young Air Force physicists in this area.

2. Lunar landing. The exact composition of the lunar surface, as well as structural and propulsion characteristics of the space vehicle, enter into this problem. Important study remains to be done—and, as an Air Force officer, you could be the one to do it!

3. Life-support biology. The filling of metabolic needs over very extended periods of time in space is one of the most fascinating subjects that Air Force scientists are investigating. The results promise to have vital ramifications for our life on earth, as well as in outer space.

5. Synergetic plane changing. The ability of a spacecraft to change altitude can also be crucial to space operations. Where but in the Air Force could Sc.B.'s get the chance to work on such fascinating projects right at the start of their careers?

Piper Signs With Aggies

The Texas Aggies have added another blue chipper to their list of football recruits with the signing of fullback Jimmy Piper of Brownwood.

Piper, an all-state selection, was an outstanding two-way player who helped lead Coach Gordon Wood's Lions to the AAA state championship last fall.

The 6-0, 175-pounder rushed for an average of 6.4 yards per try and averaged 14 tackles per game. He has 10.2 speed, was the leading scorer on the team, the top defensive hand and possibly the most nearly complete football player ever produced at Brownwood.

He is president of the student body at Brownwood High.
