A&M Receives USDA Contract

Texas A&M has been awarded a \$97,000 U. S. Department of Agriculture contract to study ways of testing meat samples to learn if they come from healthy animals at slaughter time. Purpose of the three-and-a-half-year project is to provide information that could help as sure consumers of a wholesome meat supply, the USDA said.

In 1967, the phonograph record will be 90 years old.

THE BATTALION

AGGIE RECEIVES SUMMER CAMP PAY CHECK
Cadet James H. Fisher, Texas A&M student attending summer training camp at Fort Sill, Okla., receives his check from the pay officer as other cadets await their turn. Fisher is one of more than 1,800 Reserve Officer Training Corps cadets attending the 1966 U. S. Army summer camp. The summer encampment, which lasts six weeks, ends July 26.

Ag College To Increase Enrollment

New students accepted for the coming fall semester are up 88.5 per cent in the Texas A&M College of Agriculture, Dr. R. E. Patterson, dean of agriculture, has announced.

He said the total number of new students accepted to July 1 amounted to 205, compared to 113 at the same time a year ago.

Of the 205 students, 86 are advanced transfers. These are students who have completed one or more years at other colleges and universities.

Patterson said A&M is the state's leading producer of agricultural graduates, according to records by the Coordinating Board, Texas College and University System. Each graduating senior in the A&M College of Agriculture can choose from two or more job offers.

He said Coordinating Board records show that Texas A&M's leadership in numbers of agricultural graduates is steadily climbing. During the 1959-60 school year, A&M awarded 33 per cent of the BS degrees in agriculture given by Texas' state-approved colleges. In 1963-64, it granted 293 or 40 per cent of the agricultural BS degrees.

If you have any used books, I would sure appreciate an opportunity to buy them. Come down our way — trade your way — you'll be glad you did.

Have a good summer — hope to see you this fall.

All this glory from one tiny seed! The sunflower towers taller than a man, its huge golden head filled with thousands of seeds . . . and every seed contains the mystery of life and growth that science cannot explain.

We are surrounded by miracles that man did not create. Who created them? Who created us? By the reasoning powers of our own marvelous minds we can be guided to see that God the Creator has made all things according to His plan, and that we can only achieve our highest development by living in harmony with it.

How can we know God's will for us? We need only a small seed of faith, for He will lead us in His way if we ask Him . . . and that seed will grow and flourish under His loving care.

AEC Awards Grant To NSC

An Atomic Energy Commission grant of \$126,000 for improvement of the Nuclear Science Center reactor has been announced by Texas A&M President Earl Rudder.

Funds are earmarked for new type replacement fuel elements in a program of increasing reactor power from 100 to 1,000 kilowatts.

Triga elements will replace plate elements currently in use to increase reactor power, versatility and safety, Dr. John D. Randall, NSC director, said.

Installation next summer of 26 elements holding about nine pounds of uranium is the third phase of a half-million dollar facility improvement program. Phase I included pool modifications and stainless-steel lining. Equipment for increased cooling capacity is being installed in Phase II.

A fourth phase plans construction of a new laboratory building for more experiment space. The reactor south of Easterwood Field now handles projects of a dozen

A&M agencies and departments and 10 other universities.

"One megawatt operation will expand the reactor's research capability," the NSC director went on. "It will enable us to do present experiments better, and do more. Experiments now requiring 40 hours dosage may be performed in four hours following power increase."

General Atomics of San Diego will assemble the 26 fuel elements by hand, with a nine-month delivery date. Each element is three feet long and weighs 20 pounds. It encases a uranium-zirconium alloy fuel mixture which has been reacted with hydrogen in one-inch diameter stainless steel tubes, four per element.

"Installation, testing and analyzing characteristics of the new reactor will require one month," Randall estimated. "Procedures, techniques, tools and forms will not change and there will be as little interruption of experimentation as possible."

Teacher Program To Start Here In Theater Arts

A history teacher or football coach directing the class play will soon be a thing of the past in Texas high schools.

The Texas Education Agency has recommended theater arts courses be included in state high schools curricula. TEA also stipulated the course should be taught by qualified personnel.

One of Texas A&M's newest teacher certification programs will supply theater arts teachers.

The Department of English, in cooperation with the Department of Education and Psychology, offers a 24-hour theater arts sequence beginning in the second summer session to prepare secondary school teachers.

The 24-hour sequence includes courses in acting, directing, voice, technical theater, theater history and playwriting. The courses are taught by C. K. Esten, director of the Aggie Players, A&M's theater group.

"Emphasis in these courses is on practical work in productions," Esten said.
