Horse Course Set Nov. 6-8

Texas A&M University's sixth annual Horse Short Course Nov. 6-8 has lined up special attractions in addition to the regular skull sessions.

The fringe benefits this year include a Shetland pony show, a regulation polo match and various horse type demonstrations to which the public is invited.

Program Chairman B. F. Yeates, Extension animal husbandman at A&M, said the Shetland pony show is set for 9 a.m. Nov. 6 in the Animal Science Pavilion.

He said the polo match at 3 p.m. the same day is designed to show the public what the game is all about and to increase interest in the sport among the thousands of pleasure horse owners in Texas. Horses used will be Quarter-type polo ponies.

The game features students and former students of Texas A&M versus students and former students of Texas Technological College, Yeates said.

The polo match site is just north of the System Administration Building on an area bounded by State Highway 6 and Farm Road 60.

Horse type demonstrations are scheduled for 7 p.m. Nov. 7 in the Animal Science Pavilion. Yeates said these include cutting horses, Shetland harness animals, Arabian classes, polo ponies, jumpers, and Appaloosa trail horses.

The short course itself begins with registration at 7:30 a.m. Nov. 7 in the Memorial Student Center. Nov. 8 program activities are devoted to horse health discussions during the morning in Guion Hall. That afternoon, short course participants will shift out to the Veterinary Medicine Building for a post-mortem demonstration and a question-the-experts session.

New Instrument Speeds Analysis

The Texas A&M University Plant Sciences Department has acquired an electronic instrument which will speed up research analysis work.

The instrument, an atomic absorption spectrophotometer, will be used by Dr. H. E. Joham and his associates.

Joham, professor in the Plant Sciences Department, said the instrument measures the amount of micro elements in plants and soils.

The \$4,000 instrument will be used primarily on cotton. It will aid in finding cotton tissue deficiency and toxicity levels of many micro elements such as manganese and zinc.

A cotton stem, root, or leaf, is collected and burned to a white ash. It is then put in a 1 percent hydrogen chloride solution and filtered. The sample is then ready to be analyzed.

Joham said it previously took about one week to analyze 50 samples, but now it takes only one day.

"This department is equipped as well as any plant sciences department in the United States," Joham said.
