

Lose To TCU

Aggies Fall In Finale

By GARY SHERER

The Aggie basketballers finished their season Thursday night and the thorn that has been in the team's side all year, poor shooting, was still with the Maroon and White.

TEXAS CHRISTIAN ran over the Aggies, 96-71, as the young team could do nothing right in the first half.

John Underwood hit the first basket of the game for the Aggies and six minutes later he hit the second field goal for the Maroon and White. In that scoring gap for the Aggies, TCU couldn't miss and built up a 16-4 lead.

The first half of this ball game, as far as the Aggies were concerned, could be summed up in one word — horrendous.

HITTING ONLY 31 per cent from the floor in the first half, the Aggies continued the poor marksmanship that has dogged them the whole season. Yet the

young team never quit hustling. Even when the score had reached 40-12 late in the first half, the Aggies, though missing practically everything they put up, kept trying to come back but could not find any scoring consistency at all.

Starting the second half, the Horned Frogs kept pouring it on but the Aggies started to find the basket a little more frequently. Trailing by 30 points and more for most of the second stanza, the Aggies were out of the ball game.

The Horned Frogs then started to miss more frequently, but the Aggies went right along and didn't hit enough to catch up.

TCU COACH Buster Brannon was experiencing his last game as a head coach and the Frogs were out to make his farewell a success. The team did not disappoint Brannon as they romped

home with their eleventh win of the year.

TCU's Stan Farr did not start but still led all scorers with 19 points and was tough on the boards. With Farr taking up the slack, the Frogs did not miss senior Wayne Kreis. Kreis, from Pampa, was hobbled by an ankle injury early in the game and sat out until about 40 seconds to go in the game. This was Kreis' last game, as it was for the Aggies' Dick Rector.

Kreis was unable to score, but Rector helped the Maroon and White attack with 15 points, 10 of them in the second half.

THE AGGIES outscored the Horned Frogs 42-41 in the second half.

Billy Bob Barnett was the high-scorer for the Aggies, with 17 points. This was the fifth straight game the Brenham sophomore had led the team in scoring. Barnett was supported by Buzzy Myatt and Rector, with 15 each.

Aggie Coach Shelby Metcalf, though disappointed, praised his young team following the game.

RANDY MATSON

The 6-6 Pampa product who is the world's record-holder in the shotput will lead the Aggie track team at Austin today in the Texas triangular meet with the Longhorns and Rice.

Aggie Track Team In Austin Tri-Mee

By CHARLIE ROWTON
The Texas Aggie track team, led by Randy Matson, faces the Rice Owls and the University of Texas at Memorial Stadium in Austin at 1:00 p.m. today.

Matson holds the Memorial Stadium shot put record — 69-0 3/4, and the shot put ring and putting area is ready for a record effort by the Aggie senior.

Aggie Coach Charlie Thomas said the Owls and the Longhorns would probably be the favorites for the Southwest Conference Championship. Rice will be running in its first meet of the young season while Texas has competed only once. The teaspis finished

one point behind the University of Houston in their only appearance to date.

The annual triangular was scheduled for Saturday but was changed to Friday to avoid a conflict with the state school basketball playoffs.

Thomas was disappointed broad-jumper Steve O'Neal not be able to compete because of illness. O'Neal is also a spring relay team. Richard who was under the weather at the Baylor meet, will try to make his best intermediate effort in Austin. Thomas said all other team members are in top shape.

IF YOU WERE TO SELECT CHEMICAL PRODUCTS

with the best prospects for expanded applications, you would include: plastics, synthetic rubber, agricultural chemicals and petroleum products. ENJAY is involved in all of these areas. It is a major supplier of a broad line including chemicals, elastomers, plastics and petroleum additives to a cross-section of American industry. ENJAY raw materials are used in the formulation of such diverse products as adhesives, food flavorings, detergents, textiles, drugs, coatings and cosmetics.

IF YOU MEASURE FACILITIES AND RESOURCES

to gauge the stature and growth potential of a company, you undoubtedly look for the resources required to develop new products, produce them in sufficient quantities, and market them. ENJAY is the domestic affiliate corporation of Esso Chemical Company, a worldwide manufacturer and marketer of chemicals. ENJAY has consistently expanded its developmental, manufacturing and distribution facilities to translate customer requirements into products. And through an intricate network of Supply Centers and Sales Offices that span the country, ENJAY people put its products where and when its customers want them.

IF YOU LOOK FOR A COMPANY PHILOSOPHY

most likely to provide the impetus for continuous growth and expansion, you examine the caliber and outlook of its management. ENJAY management has constantly implemented a youthful, progressive policy. The essence of this policy has been to satisfy the customer's needs. Its direction is based on a continuous appraisal of which products are needed today, and what tomorrow's needs will be.

IF PAST PERFORMANCE IS AN INDICATION OF FUTURE SUCCESSES

ENJAY would rate high on any scale. Its contributions in the development of copolymers, butadiene, butylenes and butyl rubber—and, in fact, with the founding of the petrochemical industry itself when it produced isopropyl alcohol from crude oil—were earlier forerunners of more recent achievements. Today, ENJAY is a major manufacturer and marketer of olefins, polyolefins, diolefins and aromatics... of intermediates for the surface coatings industry... of chemicals for oil producers... paramins, for fuels and lubricants. But customers look to ENJAY for more than the products they need. They depend on ENJAY technical sales representatives to provide advanced technical data and assistance. They bring knotty production problems to ENJAY. And they look to the scientists in the ENJAY laboratories for the new products and new solutions that result from continuous basic research. That's why ENJAY has, over the past several years, experienced a growth significantly greater than that of the chemical industry as a whole.

IF YOU WISH TO CHOOSE ONCE AND CHOOSE RIGHT

you can follow many precedents for building a lasting, satisfying career with ENJAY Chemical Company. ENJAY engineers tend to remain ENJAY people. They enjoy the progressive personnel relations policies of the company that pioneered many of today's most advanced personnel concepts. Whatever their individual interests, talents or goals, they find expression in the broad areas of ENJAY's own varied activities. The continuous growth of the company provides ample latitude for personal development. In a dynamic industry such as ours, the vistas are limited only by a company's ability to attract and develop outstanding potential leaders. Because ENJAY attracts many of the top scientists and engineers, the professional level is high, the atmosphere stimulating, and the day-to-day work challenging.
