

FIVE-TON MOVING JOB
Workmen skidded, jacked and levered a five-ton, 20-foot long nuclear reactor heat exchanger through a hole in the wall into position at the Nuclear Science Center Wednesday. The apparatus is part of the cooling installation for a ten-fold reactor power increase, to one megawatt, early in 1968.

Residents Issued New Traffic Plans

Special driving instructions during football weekends for local residents have been issued by Chief of Police Melvin H. Luedke, in order to help keep traffic congestion to a minimum. Residents of Bryan, who live on the west side of Texas Avenue, to use South College Avenue west on F.R. No. 60 south on F.R. No. 2154. Also College Avenue to Old College Road south on F.R. No. 2154, also south on Fin Feather Road (new) near the International Shoe Factory, south on F.R. No. 2154. Residents who live east of Texas Avenue south on Texas Avenue, to the traffic light at the East Gate area, west on New Main Drive also west on Jersey St. Residents of College Hills area in College Station, use Walton Drive to enter the campus, also west on Jersey Street.

A&M Profs Turn Authors

2-24—A&M Prof Turn Authors... Dr. M. L. Greenhut, Economics Department head at Texas A&M University, has signed a contract to write an academic-level book for Appleton-Century Crofts Publishing Company. Greenhut said the book will be directed to professional economists and graduate students on the Ph.D. level. He estimated "A Theory of the Firm in Economic Space" will include about 350 pages and be published early in 1969. Dr. Greenhut has six other professional books to his credit in addition to multiple articles in world economic journals. His first book, "Plant Location in Theory and Practice," went into its third printing in May. Dr. Lawrence S. Dillon, biology professor at Texas A&M University, is the author of a book, "Animal Variety," published this month by William C. Brown Company of Dubuque, Iowa. Dr. Dillon said the 180-page paperback is part of Brown's Concepts of Biology series used as supplementary reading material in university introductory courses. The book includes information about unicellular animals and differs from the usual treatment by stressing habits, behavior and the control of behavior. Dillon said the book attempts to show that animals not only differ in increasing complexity regarding structure, but also in mechanisms controlling the use of structure. The book is Dillon's sixth on biological subjects.

A&M To Help In Columbia's Politics Study

Columbia University's American Assembly has selected Texas A&M University to co-sponsor one of its seminars on "State Legislatures in American Politics," announced A&M President Earl Rudder. The meeting, "Texas Assembly—1967," will be conducted here Oct. 26-29. Rudder, assembly chairman, said approximately 75 top state legislative and business leaders have been invited to participate. The American Assembly was established by Gen. Dwight D. Eisenhower at Columbia in 1950 as a national, non-partisan, education institution. It is dedicated to the principles of informed talk and is an instrument for voicing the opinions of both the expert and lay citizen on significant public issues. In addition to the national and Texas A&M meetings, 17 other state and regional assemblies will explore the same "State Legislatures in American Politics" topic. Each assembly will produce a publication on the subject for wide distribution following its meeting. Dr. Frank W. R. Hubert, dean of A&M's College of Liberal Arts, will serve as assembly director.

Reactor Equipment Added

The largest piece of equipment is being installed for cooling Texas A&M University's increased power nuclear reactors. A five-ton heat exchanger was lowered into place Wednesday, ready for hook-up to the manually-operated cooling system. The custom built, 20-foot long exchanger was moved into position at the rear of the Nuclear Science Center by hand. The device contains stainless steel tubing for carrying coolant. Dr. John D. Randall, NSC director, said the larger cooling system is expected to be in operation by the end of October. It will take hot water from around the reactor core, cool it five to seven degrees and pump the fluid back into the reactor "swimming pool." The system will be used temporarily at present power level operation of 100 kilowatts. New triga elements containing zirconium-uranium fuel will be installed after the first of the year.

Prof Invited To German Meeting

Dr. W. H. Kohler, assistant professor of nuclear engineering at Texas A&M University, has been nominated to participate in an international symposium Oct. 30-Nov. 3 at Karlsruhe, Germany. The International Atomic Energy Agency is hosting the symposium on fast reactor physics and related safety problems. Participants are nominated by their respective governments. Dr. Kohler will present a paper, "The Influence of Time Dependent Coupling Coefficients and Delay Times on the Kinetics of a Modular Fast Reactor Core." Though peanuts are grown throughout the world and are the second largest source of vegetable oil, the peanut is almost ignored outside America as a protein food for the human diet.
