# Astronomers study planetary phenomena

Though Texas A&M has no degree programs in astronomy, the university has a unique team for study of planetary phenomena. The Physics Department formed the five-scientist team with recent addition of two research scientists. The members believe it has to be ranked as one of the best.

Dr. Gilbert Plass, Physics Department head, admits the group has unusual potential for probing secrets of other planets of the solar system.

By gaining a better understanding of the planets, scientists can learn more about the earth, its past, present and future.

The TAMU team consists of Plass and Dr. George Kattawar, astrophysicists and specialists in planetary atmospheric theory; observational astronomer Dr. Ron Schorn and the new research scientist.

Dr. Louise D. Young and Dr. Andrew T. Young form a husband-wife team. She is a spectroscopist; he, an experimenter and observer.

"The results can be very fruitful when we work together," he said.

Like Schorn, the Youngs were technical staff members of the Jet Propulsion Laboratory in Pasadena, Calif., before coming to TAMU. Their appointments became effective this month, Plass noted.

Plass and Kattawar have done extensive work on mathematical modeling of planetary atmospheres under NASA contract. By following scattering events as light interacts with gas molecules of an atmosphere, they seek to determine atmospheric composition. Formulae they derive are compared with NASA data acquired with interplanetary probes, spacecraft sensor scans of earth and study of color in the earth's twilight sky.

Schorn provides data on atmospheric conditions, primarily through spectra photographed with the astronomical telescope. He recently completed an observing session at McDonald Observatory in West Texas. He obtained

Spectra reveal the presence of elements, whether in a comet, a planet's atmosphere, a star, interstellar gas cloud or a substance under study in the laboratory.

Dr. Young, as a spectroscopist among other capabilities, can make spectrum plates yield a large fund of information. She will work with plates recently brought from McDonald by Schorn, Kattawar and Plass. A former associate research scientist at UT-Austin, she has worked before with Schorn on Martian and Venusian atmospheric phenomena and its measurement.

She taught engineering at UCLA, where her degrees in aerospace engineering were awarded. The Ph.D. came from Cal Tech. Dr. Young was a senior scientist at JPL and earlier a Douglas Aircraft Co. consultant.

Dr. Andrew Young is engaged in NASA-funded design and testing of cameras for the Viking project, an attempt to put the first U. S. lander on Mars' surface. The cameras are expected to return to earth stereo photos of the Martian landscape.

An experimenter and observer like Schorn, he was a research fellow at Harvard College Observatory and astronomy lecturer at the Cambridge university. He taught at UT and was at JPL five years.

Young's interests are high-precision photometry and spectrophotometry, scintillation and atmospheric optics and the physics and properties of detectors.

He worked with a West Coast research team that reported in December the discovery of sulfuric acid in the brilliant cloud tops that hide Venus. More concentrated than in an auto battery, the acid was identified by comparing airborne infrared studies of Venus with a computer simulation of color properties of different substances.

The scientist said he has become more interested in planetary atmospheres, specifically in radiative heat transfer and its meteorological effect on atmospheres.

# Monday SG Radio cablecasting begins

Student Government Radio returns to the air Feb. 11 at 2 p.m. at 107.5 stereo FM on the Midwest Video Cable.

The radio will cablecast 12 hours a day, Sunday through Friday.

John Herndon, manager - program director, invites all students not only to listen to the "smooth sounds" of SGR but also to volunteer their time if their interest lies in radio work. SGR, centered on "lots of music and little talk," according to Herndon, is looking for people interested in broadcast news, being disc jockeys, doing feature interviews with various campus visitors and doing radio advertisements. Experience is not a necessity. Begun last year in an extra Midwest Video room, SGR has moved to the back half of the Ridgerest Barbershop, 3605 Texas Ave., expanding its facilities to transmit better sound. Midwest Video, under the auspices of Bob Reese, donated facilities, utilities and equipment.

Applications are available for the volunteer jobs in The Student Government Radio booth in the Student Programs Office on the second floor of the Memorial Student Center.

Students interested in working as news reporters or news broadcasters should attend a meeting in the Kruger-Dunn conference room Thursday at 8:30 p.m., or call either Alan Killingsworth at 846-8329 or Steve Gray at 845-2061.

# Bookstore may have 'porno' once again

After many months and much uproar "soft-shelled pornographic" material may be returned to the shelves of the Texas A&M Bookstore.

In a letter to Vice President for Business Affairs, Tom Cherry, Vice President for Student Services John Koldus requested that magazines such as Playboy, Penthouse, Playgirl, Oui, Swank, Viva, and Gallery be offered for sale once more.

The request was made after a meeting with a Student Senate committee and checking with Chuck Cargill, University Center manager.

FOR BEST RESULTS TRY BATTALION CLASSIFIED

# "JERRY GARCIA, PINK FLOYD AND ERNEST TUBB USE IT."

All good recording studios have equipment to control the frequency response of the music being recorded, but it costs thousands of dollars. Now JVC has this system in affordable receivers; called SEA (Sound Effects Amplifier). This system allows you to compensate for the irregular acoustics of your room. Mix your own creation of sound, or simply to shape the tone quality to suit your own taste.

Sound interesting: Hear and try it at
