Freeman named to executive post

W. C. Freeman, vice president announced Tuesday. and comptroller for the TAMU System since 1965, has been named executive vice president for administ-

A&M sub to make TV debut

TAMU's new submarine will be used in an educational documentary

to be shown as the "ABC Movie of the Week" Sept. 24.

Dr. Richard A. Geyer, head of the Oceanography Department, said "Diaphus," a two-man research submersible, will be trucked from detects Galveston to California this weekend. Filming starts next week in waters off Catalina Island.

"Diaphus," which the Oceanography Department acquired this spring and has already been on two major cruises, will be the primary sub in the 90-minute movie.

Geyer said he was contacted by Marty Katz, director of production administration and operations for ABC Entertainment. He said the TAMU sub was selected because of its unusually large dome which allows greater visibility.

Anthrax claims 200 Texas cattle

AUSTIN, Tex.—Oklahoma temporarily stopped movement of Texas cattle into the neighboring state due to an outbreak of dread

anthrax in Falls County.
About 200 animal carcasses have been burned in the county since the anthrax quarantine was imposed June 28. The quarantine covers only that portion of the county east of the Brazos River.

A USDA spokesman said "suspected" cases were discovered in surrounding Texas counties and in an Oklahoma City stockyard.

Animal Health Commission officials recommended continued vaccination of cattle in Falls, McLennan, Leon, Freestone, Robertson, Bell, Milam, and Limestone Counties. They were optimistic about control of the outbreak. Oklahoma first placed an embargo on Texas cattle, then limited it to movement from the eight counties.

About 300,000 cattle were scheduled for vaccination in the Central Texas area, and only 250,000 doses of the vaccine were initially available.

An estimated 110,000 head of animals were in the quarantined zone. Forty-one roadblocks were established to prohibit movement.

Texas National Guard, the Department of Public Safety and the State Department of Agriculture assisted in efforts to control spread of the disease

"This new designation more appropriately reflects the responsibilities which Mr. Freeman has so ration, President Jack K. Williams effectively and dilligently carried out in recent years," Dr. Williams said. "His service has been invaluable during this continuing period in which we are faced with massive financial and related require-

Freeman joins Gen. A. R. Luedecke at the executive vice president level for the statewide educational, research and public service system. Luedecke is executive vice president for physical plants and grounds.

New laser pollution

The U.S. Coast Guard is getting a jump on water pollution.

Wednesday they came to the

TAMU campus for the trials of a new laser device developed by A&M scientists to detect oil and other hazardous materials on the water.

The device employs two lasers and an optical sighting device. It was hand-crafted by a team from the Remote Sensing Center, a division of the Texas Engineering Experiment Station.

The Coast Guard-funded project initially is designed to be mounted on bridges and other devices over the water to monitor rivers and har-

Head of the team, Bill Hulse explained that "the device employs a blue and a red laser to check the surface and subsurface of the water and detect what's suspended in it. Oil and other materials in the water will do certain things to the signal that will alter the return. The lasers make use of the machine possible in nearly all weather conditions.

The sensor's electronic signals will be turned into digital words which will be passed into a computer that will tell us what is going on in the water," Hulse said.

'Going even further, these monitors from over a large area could be linked to a central facility to allow central processing for a picture of conditions in a large area,'

'We hope also to add more wavelengths and perhaps a white light source. The additional wavelengths would allow us to detect a variety of things in the water like algae and plant growth. The white light source would give a spectrum that could possibly enable the detection of chemical com-

Film from India set Saturday

The India Association will meet Saturday in Room 102, Zachry Engineering Center, at 7:30 p.m. for screening of the President Award winning movie, "ANUBHAV.
