Seafaring women learn to exist in male world

The women gathered to wave goodbye as the large ship pulled away from the dock but they waved from the ship not the shore.

An eight-man pick-up band industriously pumped out the "Aggie War Hymn" and the "Budweiser Song" as the 14 women and almost 200 men of Texas A&M University's Maritime Academy left the dock at Pelican Island for the start of their annual summer cruise aboard the "Texas Clipper."

Three of the distaff cadets are back for their second cruise as upperclassmen. One of them, Susan Carter of Kansas City, Mo., will probably become the first woman to go to sea as an U. S. Maritime Service officer when she graduates next year. Lynn Bell of Houston and Diana Dietrich of San Antonio are also advanced cadets who will the ship during the cruise.

Dietrich, a boiler room fireman, reports her parents took the idea of her going to sea very well. She sagely says the way to survive in this previously all-male world is "... to do your work and don't make problems."

Bell bubbled with enthusiasm, saying last year's fears have turned into this year's, "I'm ready to go."

"I've really been looking forward to this cruise," she said. "The big-

gest problem is keeping up with the men all day—enduring is what's tough," she exclaimed.

This year Bell will be standing topside watches looking for obstructions and other ships. In addition, she and the other two advanced women will be advisors to the 11 prep women who are aboard as members of the "Summer School at Sea" program. But, they won't be too much help because "... we want them to find out things on their own," Bell went on. "This ship is a different environment. You can't get away from people—you have to learn to get along."

The men's reaction to the coed group was mild and typically male, "... we just wish there were more of them."

Robert J. Blackwell, Assistant Secretary of Commerce for Marine Affairs, was on hand to speak to the departing cadets about the growth and modernization of the U. S. Maritime Service.

The converted oceanliner will carry the 200 students on a two-month island-hopping cruise around the Gulf of Mexico and the Caribbean.

The ship carries sophisticated satellite communications gear that will allow them to stay in daily contact with the Galveston campus. They will also be relaying transmissions

for the famed Jacques Cousteau and the crew of the "Calypso" who will also be operating in the Gulf.

The satellite communications will also allow the transmission of experimental data. An Automatic Picture Transmission Satellite will furnish them with infrared and visible pictures of the weather from space.

Dunn to talk to callers on student radio

Jeff Dunn, TAMU Student Government president, will be the guest on a Thursday night feature program beginning at eight on Student Government Radio.

Questions from the calling audience will be answered by Dunn along with questions by the radio personnel.

The latter part of the program will be a potpourri of information with general questions being taken from the listening audience.

Student Government Radio is located at 107.5 on the FM dial of Midwest Video. Broadcasting hours during the summer are 8 p. m. to 12 p. m.
