Geared to industries, builders

Service provides energy info.

A statewide energy advisory service to help Texas industrial, residential and public energy users has been initiated by the Center for Energy and Mineral Resources (CEMR) at Texas A&M University, announced Dr. Richard E. Wainerdi, CEMR director.

Called the Energy Advisory Service for Texas (EAST), the new program will be directed by Dr. Stephen Riter, an associate director of the CEMR. The program is partially supported by a grant from the United States Energy Research and Development Administration.

The Energy Advisory Service for Texas is an experimental service supported by the Energy Research and Development Administration to

test methods for transferring energy conservation methods to users.

Initially, EAST will develop programs to serve medium-sized manufacturers, residential builders and the operators of large existing buildings. These target groups have been selected because of their existing high potential for energy savings.

Medium-sized manufacturers were selected as an initial audience because many are heavy energy users, but they do not have trained personnel to formulate and carry out a comprehensive energy conservation program. For example, many such industries manufacture process steam and use process heating, two operations which use a great deal of energy, but in which the potential for improved efficiency of energy use is also high.

EAST personnel will work with builders to help them determine energy-efficient equipment which

can be incorporated into houses, apartments and larger buildings. This could include recommendations on the proper type and amount of insulation, using heat pumps for cooling and heating, using double-pane windows and other measures.

A special team of conservation specialists will be available under the EAST program to evaluate the equipment and operating practices in large existing buildings. After studying the equipment and operation, the team will recommend conservation measures which might be taken.

Other phases of the Energy Advisory Service for Texas will include information programs to support the efforts to reach industrial and residential energy groups, and a program to evaluate the effectiveness of EAST and to plan additional activities.

Providing energy information to Texans is not a new concept for A&M. The Center for Energy and Mineral Resources has been working in this area since it began operations in 1975. Other parts of the Texas A&M University System, such as Texas Transportation Institute, Texas Agricultural Extension Service, and the Texas Engineering Experiment Station have been working for years to help Texans with energy problems.

"The grant from the Energy Research and Development Administration will allow us to expand our past efforts and concentrate on real groups with a high potential for energy savings," Riter said. Methods for reaching these groups will include conferences, workshops, on-site visits, consultations, presentations for interested audiences, publications, media information programs.

City Council to discuss fiscal budget

A public hearing concerning the 1976-77 College Station municipal budget leads off the business agenda for the College Station City Council meeting tomorrow.

The \$7,481,420 budget is expected to be approved after the public hearing. The budget represents a 20 per cent increase over the current year's budget and a 63 per

cent increase over last year's budget.

The Council is also scheduled to discuss the projected housing inventory which will be available in College Station in September.

The meeting begins at 7 p.m. in the Council Chambers of city hall, 1101 Texas Avenue.

Consol receives \$121,834

Governor Dolph Briscoe announced approval Friday of a \$121,834 Office of Human Development grant to A&M Consolidated Schools in College Station.

The grant includes \$55,169 in new federal funds and authorization to use \$537 in carryover funds for a full-day Head Start program and \$63,665 in new federal funds and authorization to use \$281 in carryover funds for a summer Head Start program. The grant was effective retroactively from April 1, 1976, through March 31, 1977. It is funded under Title V of the Head Start,

Economic Opportunity, and Community Partnership Act of 1974.

The full-day Head Start program is serving 60 children through three classes in one center. Classes meet five days per week for nine hours per day for 36 weeks a year.

The summer Head Start program has been delegated to the Bryan Independent School District (ISD) and is serving 300 children through fifteen classes in one center for five days per week, four hours per day.

Classes are meeting during the weeks of June and July.

Objective of the program is to present a sound early childhood education program for low-income children. In addition to presenting a education program, the children are given physical examinations and needed follow-up.

Grant processing and program liaison are through the Economic Opportunity Division of the Department of Community Affairs.

KAMU features heart

"Cardio-Pulmonary Resuscitation," a method to give heart failure victims another chance at life, will be the subject of KAMU-TV's "Femine Touch" next week.

The Texas A&M University production, hosted by women's editor Dale Torgerson, will be aired Saturday, June 26, at 5:30 p.m. Channel 12 on the cable.

Becky White, a Registered Nurse from St. Joseph's Hospital, and Laura Kitzmiller, for the university's Health and Physical Education Department, will demonstrate the technique and explain what it is, said Torgerson.

"The method can be used in case of heart failure caused by heart attack, electric shock, poisoning, drowning, auto accident or any other where the heart has stopped beating," she explained.

"Clinically, a person is dead when the heart stops beating, but biologically he has four more minutes before death," Torgerson said. "Probably the technique could be picked up by watching the program and effectively used if it has been practiced. The course will be taught to adults and children by the Valley Development Council."

Information for class scheduling can be obtained by calling 822-7525.

May held 12-day dry spell

May provided near-normal rainfall in the area, although the month included the longest dry spell so far this year.

Parts of Bryan and College Station went 12 days without rain. But 25 observers in a network for Texas A&M's Meteorology Department averaged 4.04 inches of rain. Records for the month average 4.37 inches.

Rain fell four to 10 days of the month, depending on observation station. It left the total for 1976 about 18 inches, slightly behind the pace that produces an average yearly rainfall of 39 inches here.

Amounts for last month were from 6.12 inches at Kurten, to 2.25 inches in the 1000 block of Fifth Street, College Station, to the high, 5.71 in the 1300 block Laurel Lane. In Bryan, the maximum was 5.28 inches in the 200 block of W. North Avenue.

The 30-day outlook issued by the National Weather Service features above normal precipitation and below normal temperatures through mid-July. Those correspond to three to four inches rainfall and temperatures producing an 83-degree mean.

The Bacardi Driver. Zippier than a screwdriver. Easy as 1,2,3.

1. Pour 1 1/2 oz. Bacardi light rum over ice in a tall glass.
2. Pour on ice cold orange juice.
3. Squeeze and drop in a lime or lemon wedge. Now you're ready to sip some zip. Because Bacardi and that hint of lime or lemon really turn on the OJ!

BACARDI rum. The mixable one.
