

Prof's give advice

Energy unit formed

The Texas Energy Extension Service goes into operation soon to provide advice available to Texans on energy conservation and use.

Texas A&M University System personnel will play a major role in operating the recently funded service which starts Nov. 1 and is designed to work in much the same way as agricultural advice has been provided for many years.

Texas A&M University will manage the \$1.1 million Energy Extension Service for the Governor's Office of Energy Resources. Dr. Stephen Ritter, associate director of the A&M's Center for Energy and Mineral Resources, will direct the program.

A variety of assistance activities will be conducted by project leaders within the Texas A&M University system and by the University of Houston and University of Texas campuses at San Antonio, Austin and El Paso.

Texas A&M University programs outlined as follows:

Dr. Swiki Anderson, Mechanical Engineering Department, will work on heating, ventilation and air conditioning engineers, designers and contractors. Dr. Anderson will help them determine the most efficient equipment and operating practices for large buildings.

Dr. Frank Buffa, Business Analysis and Research Department; Gerald Keim, Management; Dr. Bill Pride, Marketing, will work with financial institutions to help them in evaluating the soundness of loans to finance energy conservation practices.

Dr. Leonard Hale, Mechanical Engineering, will work with Texas manufacturers to provide them with information and assistance in reducing energy consumption in their industrial processes.

Dr. William Hyman, Industrial Engineering, will help hospitals in the Houston area establish energy management programs.

Don Moore, Center for Urban Programs, will assist local government officials in developing city-operated energy management programs.

Walter Patterson, Building Construction, will work with home builders to encourage them to incorporate energy-conserving construction practices and equipment in new homes.

Larry Perrine, Center for Energy and Mineral Resources, will direct the service's management office activities involving publication development, evaluation and response to individual inquiries.

Hoover Carden, Prairie View A&M Cooperative Extension, will lead a program designed to help rural low-income families in several Texas counties solve their home energy problems.

Texas was one of 10 states selected for the Energy Extension Service Program on the basis of competitive proposals submitted to the U.S. Energy Research and Development Administration. Different approaches will be taken initially in each state in an effort to determine the most effective methods for transferring energy information to the public.

Mossler claimed daughter was fathered by Rockefeller

HOUSTON — A suit questioning the validity of a 1975 supplement to a will disinheriting three of Candace Mossler's adopted children will resume today in civil court.

The suit has included some rather bizarre testimony in the past few days. Friday Rita Johnson Wilder, 33, a natural daughter of the flamboyant Mrs. Mossler, testified her millionaire mother once told her Winthrop Rockefeller was her natural father.

Rockefeller, who was governor of Arkansas and son of multimillionaire John D. Rockefeller, died several years ago. His family in Little Rock, Ark., disputed the claim.

Mrs. Wilder's birth certificate lists Norman Johnson as her natural father. Johnson was Mrs. Mossler's husband prior to her marriage with the late financier Jacques Mossler.

Mrs. Mossler was the defendant in a sensational murder trial in late '60s and defended by attorney Percy Foreman. She and a nephew of Jacques Mossler were found innocent of the Florida millionaire's murder.

Two adopted brothers, Daniel Mossler, 26, and Christopher Mossler, 25, are challenging a supplement to a 1968 will in which they

were named. They claim their stepmother was under "insane delusions" when she prepared the document. The brothers had also filed suit against Mrs. Mossler over the handling of a separate trust arranged by Jacques Mossler before he died in 1964.

Mrs. Mossler's estate at the time she died was valued at anywhere from \$12 to \$20 million.

1952 class reunion set Saturday

More than 500 former students are expected to attend Texas A&M's Class of 1952 reunion this weekend.

The 25th year event will include a Friday evening social and buffet, a Saturday luncheon-business meeting and an after-the-game social, dinner and dance.

Academic presentations are planned at 2 p.m. Friday with lectures by representatives of the College of Agriculture, Business, Engineering and Veterinary Medicine. Class members then assemble for a presentation by a university official.

The class members will wear name tags bearing a reprint of their photographs as they appeared in the 1952 Aggieband yearbook. The '52 Aggies will also receive a 25th-year yearbook containing greetings from university officials and a directory listing of class members. Among its ranks are John W. Cagle, Association of Former Students president in 1975 and Fort Worth business president.

Aggie Band Association has seventh reunion on Saturday

The Texas Aggie Band Association (TABA) will hold its seventh reunion-business meeting on campus Saturday.

The association was formed in 1966 to aid Texas Aggie Band objectives.

Including Aggie Bandmen and their dates and spouses, almost 1,000 are expected for a Saturday luncheon and meeting in Duncan Hall's east wing.

Col. E. V. Adams, Aggie Band director from 1946 to 1973, will be guest speaker. The program will recognize Mrs. Richard J. Dunn, wife of the late Aggie bandmaster who preceded Adams, and others

who have benefited the Aggie Band through the association.

The TABA assists the Aggie Band through production of stereo albums, support for out-of-town football trips, halftime performance films, spring barbecue for seniors and other band needs and activities.

Now you know

United Press International Wall Street, in New York's financial district, was named so because a wall once ran across lower Manhattan to protect early settlers from Indian attacks.

Humanics society branches to A&M

Texas A&M University students enrolled in the Colleges of Agriculture, Business Administration, Education and Liberal Arts can now study for a professional career with one of the nation's 10 largest youth agencies.

The opportunity springs from a program recently formalized between the University and American Humanics (AH), a nonprofit voluntary organization that recruits and trains professional youth agency leaders using academic course work already offered on college campuses. Texas A&M has the only such setup in the Southwest.

In order to fill some of the 1,800

youth agency career positions that become available annually, (AH) has established similar networks on nine other university campuses. While students take needed course work from the university, AH coordinates administration, internships, placement, student loans and scholarships, field trips, workshops and counseling.

The Texas A&M program became formal this summer when it was announced that the Kellogg Foundation and AH had awarded a three-year grant totaling \$116,135 to fund the program. The Kellogg Foundation's contribution was \$56,725.
