

Facility opened Officially Friday
 Clyde Wells, chairman of the Texas A&M University System Board of Regents, opened Texas A&M's Agricultural Research and Extension Center Friday "for the benefit of the people of the West Cross Timbers area."
 Wells, Hugh Wolfe and Dr. Jarvis Miller, president of Texas A&M, dedicated the 17,200-square-foot center. Wolfe is a Stephenville businessman.
 The Texas Agricultural Experiment Station and the Texas Agricultural Extension Service operate the center, which specializes in research and information programs relating to crops important to the West Cross Timbers region. Many of the programs revolve around pecans, peaches and for-

estly 2,000 people toured the center and participated in the field trip of the 679-acre site.
 Wells discussed the agricultural potential of the region, expressed appreciation for the broad-based support which helped make the facility a reality and cited the opportunities for the center's personnel to work closely with Tarleton State University.

CAREER OPPORTUNITIES FOR ENGINEERS
 Tennessee Gas Pipeline Co., a major division of Tenneco, will be on campus Sept. 27, 1977. Corporate headquarters is located in Houston, Texas and the natural gas pipeline runs from the Rio Grande Valley of Texas to the New England area.
 Contact the Placement Office for additional information and to schedule interviews.

Eclips
 PRESENTS BRYAN-COLLEGE STATION'S ONLY PROFESSIONAL FACIALIST:
LUCIA ADAMS
 Lucia comes to the Eclips hair shop with a wide variety of training and experience; she has studied in Nicaragua, South America, New York and Mexico City. Lucia tells a little about herself and explains why everyone needs a professional facial:
What, exactly, is a facial?
 Lucia: A facial is a deep-cleansing of the face to give you a healthier look.
How do you accomplish this?
 Lucia: I first analyze the client's skin with an amplifier light to see if the face is oily, dry or normal and to see if there are any broken capillaries, pigmentation problems or skin problems. I can then make a chart of the person's face and use a vac-suction device to remove all the dead cells. I then massage the face and apply a European cosmetic mask as treatment.
What are the benefits of a facial?
 Lucia: We all have a lot of pollution in our faces and accumulate dead cells. All the vitamins and creams in the world won't do you any good, if you haven't had a facial to remove these dead cells. A facial will smooth lines and immediately give you a much healthier look.
How much does it cost?
 Lucia: The cost is \$20.00, and the entire process lasts about an hour and 15 minutes. I currently work on Tuesdays, Wednesdays and Thursdays, but I will expand my hours when Eclips moves to its new location.

Nobody knows more about the opportunities at E-Systems than the people who joined us a few years ago.

Here's what three of them have to say:

Tim Bennett—
 "The attitude at E-Systems is what impresses me the most. I'm part of a total department and do not get lost in the shuffle. As a contracts analyst, I'm getting valuable experience and instruction needed to become a contracts administrator."
 "As an administrator, I will go to customer offices to present and negotiate contracts and proposals."
 "Responsibilities? You know it! I feel E-Systems wants me to grow. Right now, I am working on my masters at night, and they are picking up the tab."
 Timothy Bennett—B.S. A Management/Marketing North Texas State University—1974

Cheryl Conant—
 "E-Systems offered me the opportunity to do scientific programming rather than working commercial programs for payrolls, accounts receivable, and so on."
 "And, I can work with a mini-computer to check my programs. I like that! And talk about responsibilities! I recently helped install a computer communications program for the Miami police force."
 "Also, E-Systems is helping me to get my masters through a closed-circuit TV hookup with SMU... right at the plant!"
 Cheryl Conant—B.S. Computer Science Stephen F. Austin State University—1975

Jerry Pate—
 "I was a co-op student, alternately working at E-Systems one semester and going to SMU the next. The company paid for my night school tuition during the work sessions. The actual working experience with the senior engineers at the plant is very important in helping to take classroom theory and apply it to practical work. I actually started a bread-board on a telephone system interface design during my last co-op semester."
 "Now, working full time, I am converting this system to the requirements of the commercial field which would be quite a breakthrough."
 "These are just three of the individuals who helped us develop and produce high-technology electronic systems for communications, data processing and management, automated document processing, and other sophisticated applications."
 Systems that are first. Systems that are one-of-a-kind. Systems that require unusual blending of technologies. These people are part of an 11,000 worldwide member team, producing over \$300 million in annual sales.
 At the Garland Division, we believe we offer the finest opportunities and most interesting assignments available... anywhere!
 If you are majoring in math, physics, engineering, computer science, business or finance, talk with our representative interviewing on your campus. Or write direct to: College Placement Representative, E-Systems, Garland Division.
