**Divorce kits:
lawyer gains**

United Press International
SAN FRANCISCO — Do-it-yourself divorce kits are gaining ground in a few states.
James Prevolos, president of the North Bay Chapter of the Academy of Matrimonial Lawyers, thinks the kits make more business for lawyers.
"If there are children or property, the do-it-yourselfers foul up so badly that the lawyers get more for straightening things out," he said recently.

**Weather station
winds up in class**

By CAROLYN KEMMERER
Although Texas A&M University's weather station has no responsibility to the general public to provide weather forecasts, the weather station participates in Civil Defense when the Bryan-College Station area is under a severe weather watch or warning.
During such conditions, the Civil Defense volunteers operate Texas A&M's radar on top of the Oceanography and Meteorology Tower to keep the public and Civil Defense authorities informed.
Charles L. Brenton is in charge of Texas A&M's weather station. The weather station, which is on the 12th floor, is at a good vantage point, Brenton said. He said that he can see 20 miles in all directions, which sometimes allows him to view weather systems forming. Brenton said that on rare occasions the National Weather Service has called the station requesting additional radar information to pinpoint a weather formation.
Brenton is called a practical meteorologist. He plots raw data for

professors to use in classroom courses.
Brenton receives information from three teletype machines at the weather station.
More than 700 weather stations send their data into Kansas City, which, in turn, transmits the information throughout the United States by a computerized communication system operated by the Federal Aviation Agency.
Brenton said 98 percent of the forecasts end up in classrooms. As a freshman, Brenton took meteorology 453. Brenton said this course is usually taken by meteorology seniors and involves a lot of forecasting. "It provides the opportunity to put everything together," Brenton said.
Brenton and his seven part-time staff mainly prepare charts, and thermodynamic diagrams that are used for meteorology labs. He said because of the A&M's weather station facilities are not merely textbook and

Old oils wipe out odors

United Press International
NEW YORK — A formulation of aromatic oils discovered 40 years ago and used with success to break up odors that afflict hospitals now appears to have a future in homes and industry.
The product goes by various names and is being marketed by a number of companies. It was first called Neutrolex Gamma. Ventures division at Milwaukee of Will Ross Inc., which has developed a new method of using it, calls it Neutro Gamma.
"What delayed widespread use is that the stuff is so powerful a single drop can go right through your floor or create other problems, so for years nobody worked out a really satisfactory general delivery method for it. Sprays didn't work at all well," says Jack D. Bryson, Ventures vice president.
Ventures worked out a method of

encapsulating the chemical in a plastic membrane cartridge. The system is drawn through this cartridge through a series of up to 30 membranes and this breaks up the odors. It does not mask odors. Ventures calls the whole system Plastocon.
The company is manufacturing the system in units ranging from \$143 to \$1,430. The system is designed to clean up the odors in a plant air flow of up to 100 cubic feet a minute. Bigger units are easily possible.
The first industrial units have been installed so far in 12 types of plants, including a treatment plant at Belmont, a tannery, a paint manufacturer, rubber and asbestos brakes manufacturer.
Bryson said three units installed at a hospital had a basic cost of \$1,600 did a decent job successfully that \$60,000 of "scrubbers" had failed to do. The Plastocon system does any natural gas or other fuel away odors.
Bryson said although the formulation has been known used for years, chemists are exactly sure why and how it works. The aromatic oils involved are used in the perfume and industries yet the compound is a masking agent. When properly delivered it creates no odor of its own, Bryson said. "Improperly delivered it will create a strong odor," he said.
The principal expense of the unit is that the cost of the membranes containing the encapsulated Neutro Gamma. These cost \$33.50 each. The average life of individual chemically treated membranes under factory conditions may be 45 days or less. In the home is about a year.
Bryson told United Press International that Will Ross is getting inquiries about the Plastocon unit from a wide variety of industries that have serious odor problems.
In the two years since it was produced, more than 10,000 of the portable home units have been sold, despite the relatively high price.

**the artistry of the Taj Mahal
is recalled in the Agra design rug
by Karastan**

The artistry that built the magnificent Taj Mahal is expressed in the beauty of this antique Agra design faithfully re-created by Karastan for its famous Oriental style rug collection. Agra, the site of the Taj Mahal, was one of the main carpet-making centers during the "Golden Age" of the Indian carpet. Unique wine reds and olives glow on a golden ivory ground—all skein-dyed in a luxurious pile woven of imported worsted wools and lustre-washed for an authentic look of antiquity. One of our many masterpieces from Karastan.
