We now have an urgent need for candidates with a BS in Electrical Engineering - No experience necessary - Salary \$16,920 per year + auto + bonus - Excellent company benefits. Call Ed Mitchell, P.E. '46-A159.

Children's mind states monitored

United Press International
WASHINGTON — One of the key recommendations of a presidential mental health commission was to try to develop ways to prevent mental illness. Scientists say a good way is to start with children.

"Potential for prevention is generally greatest in the early developmental stages of a disorder," said one of the commission's staff panels.

"Research to discover ways to successfully treating these disorders in childhood should get highest priority."

More than five percent of American children between the ages of 3 and 15 have persistent and socially handicapping mental health problems, according to the panel.

Little is known about the number of mental health problems in children under 3 years of age, but the panel report said emotional disorders and developmental delays occur in the very young.

Although the researchers said it is difficult to precisely assess the prevalence of childhood mental health problems, it appears that problems are more common in boys, more frequent in adolescence and more common among children living in large cities than in small towns or rural areas.

Mental health problems in childhood are clearly sufficiently common to constitute a major concern in the planning of health services to deal with mainly by child psychiatrists," the panel report said.

The 15-member study panel on emotional and mental disorders in childhood are not only a source of suffering for the child and his family, but they may be forewarning of more serious mental health problems in adult life.

At least two million Americans of children have severe learning disabilities, according to conservative estimates, and the commission said if these are neglected they can have profound mental health consequences for the child and the family.

Disorders that begin in adolescence are most likely to continue into adulthood, the researchers said. Emotional disorders in young children have a better prognosis.

Little is known about the causal mental problems in children but the president's commission said prenatal care and healthy children can prevent certain conditions. It may later lead to mental disability.

It is known, for example, that severe malnutrition in pregnancy woman retards the growth of the unborn child and that can inhibit proper mental development in infants.

But even the delivery of a biologically healthy infant does not guarantee that the child's psychological and social development will be smooth, the commission said.

"It is vitally important to detect and attempt to correct at the earliest stages problems of physical, emotional and cognitive development which can lead to emotional maladjustment and learning difficulties," said the report to President Carter.

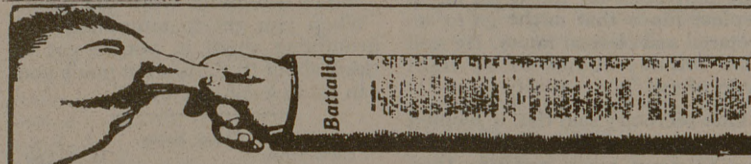

To help prevent the development of mental health problems in children, the commission said comprehensive prenatal and early care should be available to women with special considerations given to school-age pregnant women and other high risk groups.

The commission said a coordinated national plan should be developed to make mental health services available to all children and called for a periodic program to assess a child's development.

Carpenter to discuss library use

Kenneth Carpenter, Curator of the Kress Library of Business and Economics at Harvard University will give a lecture at the Texas A&M University Library at 7 p.m. Thursday in room 226. The lecture will cover the development and utilization of the Goldsmith's-Kress Library of Economic Literature.

The Goldsmith's-Kress Library of Economic Literature offers resources in the economic, business and political history of modern industrial society. The A&M University Library owns Segment I of the collection on 50 mm microfilm, which consists of the combined pre-1801 holdings of the Goldsmith's Library of Economic Literature at the University of London, and the Kress Library of Business and Economic Literature at Harvard University. The collection offers many unique items for the researcher, and it is an unparalleled resource for early economic and business history. A printed catalog provides basic access to the collection.
