apply to build gas pipelines

United Press International
OMAHA — Four major pipeline
companies have filed an application
with the Federal Energy Regulatory
Commission to build an 809-mile, \$1.4 billion pipeline to transport natural gas from Alberta, Canada, to midwestern and eastern U.S. mar-

kets, it was announced Monday.
The companies, filing the application under the Northern Border Pipeline Co., said the pipeline system would transport gas from the Alaskan North Slope and could be on line by the 1981-82 heating sea-

Involved in the proposed project are Northern Natural Gas Co., Omaha; Northwest Energy Co., Salt Lake City, Utah and Panhandle Eastern Pipeline Co. and United Gas Pipe Line Co., both of Hous-

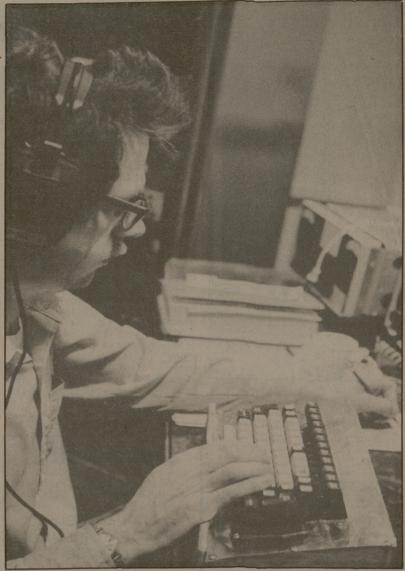

The Northern Border application proposes construction of the 42-inch diameter pipeline from Port of Morgan, Mont., to a point on Northern Natural's system near Ventura, Iowa.

Volumes of gas contracted for by United and Panhandle will be made available to them through exchange-displacement and transportation arrangements through existing pipeline systems," the companies said.

This volume of gas is sufficient to

supply approximately 2 million homes," the companies said.

The total Alaskan project, proposed to be completed in 1984, will be capable of transporting initially up to 2.4 billion cubic feet of natural ******* the United States.

A&M involved in annual radio emergency test

By BECKY LEAKE

In a secluded room filled with the low-pitched hum of radio equip-ment, "DX Dave" listens intently to the morse code coming over the earphones telling of flash floods and tornadoes in Houston.

Pausing only to get his notes in order, he starts relaying the messages for help to other Ham operators standing by in different

points all over the country.
Actually, "DX Dave" McCarty, a junior chemical engineering major from Overland Park, Kan., was participating in a national test of the Ham Radio's Emergency Broadcast

The idea is to keep us on the ball," said McCarty, who earned his nickname from his skill in making contact with foreign stations, which are called DX stations by Ham operators.

Sponsored by the American Radio Relay League and CQ Magazine, the simulated emergency test is held yearly during the last week of January

McCarty and other members of the Memorial Student Center Radio Committee used their own equipment to participate in the national test which lasted 36 hours, ending at midnight Sunday

McCarty estimates about 100 messages were sent and received at A&M's station, W5AC, during that time. Although the messages were fake, in real emergencies, Ham radio operators work with the Red Cross and other rescue organiza-tions locating disaster victims and
