DEBATE CLUB: Will meet at 8 p.m. in 327 Academic.

TAMU HANG GLIDING CLUB: Will meet at 7:30 p.m. 110 Harrington.

Nature photography by A&M prof

Photo workshop set Nov. 15-16

A nature photography workshop sponsored by Liberal Arts — Continuing Education will be held the weekend of Nov. 15-16.

Delmar Janke, a Texas A&M University professor who has been a nature photographer for more than 25 years, will lead discussions on Saturday morning on cameras; auxiliary equipment such as light meters, filters, extra lenses, tripods and flash

units; film and film processing; and concepts of composition such as lighting, color and subjects.

Saturday afternoon, participants will go to a local scenic location to take pictures with their own 35mm cameras. The photographs will be processed overnight and evaluated on Sunday afternoon.

Enrollment is limited to 20 participants.

Interested individuals should register as soon as possible. Registrations of \$50 for the cost of film and processing will also be accepted at the start of the workshop if space is available.

For more information, contact Henry Pope, Liberal Arts — Continuing Education at Texas A&M University or call 845-7814.

LIGHT AND EASY II

HUGH HEFFNER INTERVIEW

20 cyclers ride in Halfast Hundred

By MARCARITA JAIME

Battalion Reporter
Jack Bryant certainly proved he was a "halfast" rider by winning the Halfast Hundred" Saturday.

The fourth annual 100-mile ride, which began at 7:30 a.m. at Rudder Fountain, awarded a trophy to the rider who is closest to the average of all the rider's times.

This year the fastest time was six hours and one minute, while the slowest time was eight hours and 48 minutes.

Bryant finished with a time of seven hours and 30 minutes, eight minutes away from the mean.

Sixteen people actually completed this year's ride; 20 participated.

"Only one person had to turn back because of slight mechanical problems," Tom Brink, Wheelmen president said. "The three others turned back for other reasons."

The major mechanical problem through out the ride was the wheel of the "sag wagon", a vehicle which follows the riders to assist them in any trouble, Brink said.

"Halfway through the ride," he said, "we noticed the wheel was about to come off, and we ended up keeping an eye on the sag wagon."

In previous years, Brink said that

dogs chasing riders had always been a problem. But this year there were no dog problems.

He said that the weather was great, the traffic moderate and the wind variable.

Last year, Brink said, the race route was a road leading to the Renaissance Festival and riders were constantly faced by speeding traffic.

This year the route kept to the back roads of Hearne, Calvert and Franklin before turning south towards College Station.

"There were almost perfect road conditions," Brink said. "It was also a very scenic route with nice, open, flat, cotton country."

He said people were pleased they survived the occurrence even though they lay all over the ground at Rudder Fountain. "I'm still recovering," Brink said. "I think I'll need a couple of days."

Brink said the Wheelmen sponsor weekend rides and anybody is invited to participate.

The rides cover 20 to 35 miles and last two to three hours. All weekend rides meet at Rudder Fountain and begin at 9 a.m.

Brink said riders are usually back before lunch and ride at a slow pace.

Soy researchers receive \$45,000

Two Texas A&M University researchers studying mixing soybeans and skim milk to produce a protein ingredient that could be used in cheese have received funding from the American Soybean Association.

J.T. Lawhon and Dr. E.W. Lusas of the Food Protein Research and Development Center at Texas A&M are conducting the research with a three-year grant of \$45,000.

Nutritional studies in humans have shown no significant differences between the dairy protein casein and soybean protein, the scientists note. If soy-milk ingredients with the FDA-required protein efficiency ratios can be produced, it

could mean a savings for cheese producers and creation of new soybean markets. Soy-milk ingredients also may increase cheese production in a time of milk shortages and high prices for caseinate.

The Texas A&M project is one of 10 new projects funded by the American Soybean Development Foundation. A 29-member board of soybean producers makes the final selection of foundation-funded projects.

Funds for investment in soybean research are provided by soybean producers through state grower investment checkoff programs and through support from private corporations.
