TV to tie A&M medical units

By KITTY FRALEY

Battalion Reporter A microwave link between the Texas A&M University College of Medicine and its Temple campus will begin operating this month and is predicted to be a substantial time-saver.

The microwave link will provide a closed-circuit television system to be used for everything from committee meeetings to taped lectures.

The microwave system, including a relay tower, cost \$251,000.

This system will decrease travel expenses and time spent on the road between College Station and Temple," Dr. Elvin Smith, associate dean of the College of Medicine, said.

The microwave system involves equipment that will convert television signals from Temple to microwave," he said. "The

relay tower will transmit them here and at this end we will convert them back into television signals

'Microwave wavelengths can't travel from Temple to College Station, so a relay station was built in Gause." Gause is located halfway between the two cities.

The 199-foot tower will receive the signal, amplify it and retranshe said. mit it,

idea that the Temple campus is a separate component," Smith said. "The College of Medicine consists of the Texas A&M campus and the Temple campus.

Hevolution during th

It's not unusual for the teaching hospital to be separated from the basic sciences portion of a medical school, Smith said, and in this case the students are at Texas A&M for two years and Temple two years.

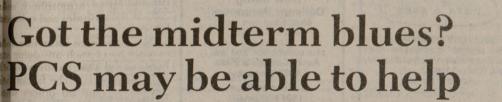

The College of Medicine has people on the staff who are qual-ified to run the system, Smith said. This includes running the cameras and repairing them when necessary

also provide a new component to the existing linkage between the vorace and a contraction All are welcome to attend a free lecture entitled: "Healing Through Spiritual Perception" given by William C. Breen, a member of the Christian Science Board of

Battalion Reporter If midterms or approaching finhave got you nervous or deressed, the Personal Counseling ervice may be able to help. The PCS deals with problems f personal concern that all stu-

nts may encounter, says Dr. Larry Roe, assistant director of the PCS. They include self image, so-cial relationships, male and female relationships, pre-marital and marital relationships.

Roe said that the most common omplaints are depression and maiety. Anxiety may be caused by competition at college, fear of faire, approaching tests and the hought of what will happen upon raduating from school

"The high pressure environ-ment of Texas A&M can cause much anxiety," Roe said.

The PCS sees a rise in the number of students with emotional problems before tests and one or wo weeks prior to finals, he said. The staff is made up of seven full-time senior staff counselors who are licensed psychologists, our full-time psychology interns and two part-time consulting

psychiatrists. The PCS run
