Rub a Dub Tuba

Staff Photo by Angie Kerr

Aggie Band member Glen Hakemack thinks nothing of cleaning his bass horn in the shower. Normally the honor is given to the freshmen who are responsible for cleaning and shining all the horns each Friday. After applying

silver polish to the horn, it is rinsed with water and is dried and polished out in the hall. Hakemack, first sergeant of B Company, is a junior building construction major from Katy and has played the bass horn for seven years.

# Human hearing safe from shuttle

United Press International  
DALLAS — Noise created by the launch of the space shuttle had no adverse effects on people in communities surrounding Cape Canaveral, an environmentalist says.

Dr. George J. Putnicki, professor in the graduate college of environmental sciences at the University of Texas at Dallas, collected sound level data at 15 different points in the vicinity of the space shuttle launch pad. Sites were as close as the nearest crowd gathering point three miles from the launch pad and as far away as neighboring Titusville, (about) 20 miles a way.

The data showed no excessive levels that could be potentially damaging to human hearing.

"From the data we gathered, the only difference between noise from the shuttle at a distance where the nearest observers would be and noise from a truck passing by, was the duration of

noise from the shuttle would be longer," Putnicki said.

Putnicki said the noise from the cheering crowd drowned out the rumble of the rocket engines nearly three miles away.

Before the space shuttle was launched, the National Aeronautics and Space Administration was required to prepare an environmental impact statement which discussed potential harmful effects on the environment as a result of the launching of the shuttle. One concern addressed the effect engine noise would have on human hearing.

Putnicki was hired by NASA through the American Institute of Biological Sciences to collect and compare the sound level data with the predictions made in the statement. The data collected showed that noise levels exceeded the levels NASA predicted, but still were not in the range of being harmful, Putnicki said.

## Rescuers assist man in building

United Press International  
SAN ANTONIO — Rescuers helped a 34-year-old man who threatened to leap from an 11-story downtown apartment building Tuesday.

David Krolej told police and department officers he was despondent about living in a rundown building.

After spending about an hour on the fire escape landings between the 10th and 11th floors of the structure, Krolej was rescued by four rescuers who pulled him inside.

He was taken to the psychiatric ward of the Bexar County Jail on charges of trespassing.

## E-Systems continues the tradition of the world's great problem solvers.

Steinmetz was one of the few geniuses concerned with the practical aspects of electrical engineering. His pragmatic analytical approach led to the development of efficient electrical power grids as we know them today.

Scientists and engineers at E-Systems are carrying on in his tradition. Through the combination of sophisticated analytical and simulation techniques, they are evolving optimal system

solutions to some of the world's toughest problems in electronics.

E-Systems is recognized as one of the world's leading problem-solving companies in the design and production of communications, data, antenna, intelligence and reconnaissance systems that are often the first-of-a-kind in the world.

For a reprint of the Steinmetz illustration and

information on career opportunities with E-Systems in Texas, Florida, Indiana, Utah or Virginia, write: Lloyd K. Lauderdale, V.P., Research and Engineering, E-Systems, Corporate Headquarters, P. O. Box 226030, Dallas, Texas 75266.
