## Today's agriculture reaping benefits from A&M research

Modern agriculture is cattle and computerized technology. It's the farmer on the tractor, and the scientist in the lab. The Texas A&M University system deals in up-to-date agriculture, as today's futuristic research becomes tomorrow's everyday technology. The College of Agriculture, the Texas Agricultural Experiment Station and the Texas Agricultural Extension Service bring the benefits of scientific and technological agriculture to the public. The role of agricultural research is to increase the quantity and quality of food available to the world.
