PHILOSOPHY CLUB & PRE-THEOLOGICAL SOCIETY: Dr. Charles Hartshorne will speak on "A New World and a New World View" at 3:30 in 401 Rudder.

Twain

(continued from page 1)

rent controversy, Kellner said. "The solution is more education," Kellner said. "That sounds ironic — we've had high schools in existence for many years. We've been teaching the book for many years, and what we need to do is educate the parents — the white parents as well as the black parents — because there may be some white parents who are still so caught up in their own bigotry that they might chuckle when they see the word 'nigger' in that book."

Kellner said the best way to educate parents about Twain's books is through the media. He said he is glad to see the media exposure the controversy has received and said he hopes it will

make people aware of what is happening. Teachers should not be in perspective of Twain's other works, he said. "True Story," the short story about a black woman whose child is literally torn from her, leaves no doubt as to Twain's feelings for blacks, he said. Kellner admits Twain's portrayal of Jim is not always pathetic and not all of Twain's work can be judged by the standards of those imperfections. "We cannot airbrush Twain's blemishes of history," he said. "We have to present it really as it was. We have to understand it and to use it."

Train leaks harmful liquid after derailment; one hurt

United Press International
COLUMBIA, La. — A train carrying 120,000 gallons of hazardous materials derailed in rural northern Louisiana, leaking highly flammable liquid and injuring a crewman who inhaled the fumes, state police said Monday.

Three tank cars of a Missouri Pacific train left the tracks about 30 miles south of Monroe in the Columbia Heights area late Sunday. Two of the cars started leaking flammable methyl acrylate, but no evacuation was ordered because the spill was minor.

"The train crewman sniffed a little of it and had to be taken to the hospital," state police C.A. Hampton said. "The leak was not that bad."

James Morrison of the Louisiana Department of Transportation and Highways said he expected to clean up most of the spill Monday, Hampton said.

Spy search nabs Hungarian

United Press International
WASHINGTON — A native of Hungary, arrested on espionage charges, got classified U.S. Army documents on behalf of the Hungarian intelligence service, an FBI spokesman said Monday.

FBI Director William Webster said Otto A. Gilbert, 50, a naturalized American citizen, was arrested Saturday in Augusta, Ga., after he received the material from an Army warrant officer cooperating with federal agents. The arrest culminated a four-year investigation by the authorities.

The FBI did not disclose details of the case, but said no classified material had been furnished to Gilbert before his arrest. However, a spokesman said, documents seized from Gilbert at the time of his arrest contained information that, if released, could jeopardize U.S. security.

"Cases like this which occasionally come to the public's attention are merely the tip of the iceberg," Webster said.

"These cases clearly demonstrate, however, that our military and industrial technology is spy target No. 1 for foreign intelligence operations."

The FBI said Gilbert, who also uses the name Otto Gyepes, was working on behalf of the Hungarian intelligence service. Federal authorities refused to

say whether the spy charges involved Fort Gordon, an Army post in Augusta, or the Savannah River Plant, which produces weapons-grade nuclear material in a sprawling facility just across the border in South Carolina.

Gilbert was taken into custody by FBI agents on a street in downtown Augusta Saturday on federal espionage charges stemming from an a charged effort to obtain classified information.

U.S. Attorney Hinton R. Pierce said the arrest was the result of an extensive and prolonged investigation by federal authorities and is believed to be one of the biggest spy cases in U.S. history. Pierce refused to elaborate on items found in Gilbert's luggage, but called them unbelievable.

Got the dissertation blues?

You finally finished your masterpiece. But now you need to type it, copy it and bind it.

Cheer up — let
ON THE DOUBLE, INC.
Take it from here.

You've already done enough work. Our typists can handle your tables, technical symbols, and other special needs. Our XEROX 9400 gives you clear, inexpensive copies. The price is right on our attractive spiral bindings. We stock plenty of blue line paper for your convenience. All in all, we give you the best deal, and we keep up with TAMU regulations regarding theses and dissertations. Don't hesitate — take that dissertation ON THE DOUBLE to 331 University, right there at Northgate.

CHAMPAGNE — just the mention of its conjures up such visions of gaiety, celebrations, weddings, New Years Eve, wealth, splendor, nobility, the toasting of dignitaries, including Kings, Queens, Emperors and Presidents, even the launching of ships. Technically, it refers to the district in France bearing the same name and to the unique process for producing a sparkling white wine, as well as to the Champagne itself. It is made from the fermented and refermented juice of the Chardonnay and Pinot Noir grapes, produced near Reims and Epernay in northwest France, and the home of some of the finest producers of Champagne in the world. While similar products are produced in California and New York State, and also called Champagne, technically they are really sparkling white wines. It is this sparkle, consisting of bubbles of carbon dioxide gas, one of the by-products of the grape fermentation, that sets Champagne apart from other wines. In producing the Champagne these bubbles are retained in the bottle, waiting to be finally released and rise to the surface, after uncorking. The build-up of the internal pressure in the wine is why the corks are securely held down by wire. Let Monsieur Ira plan your wine-tasting party.
