The plastic on this 10-speed bicycle will not only make riding easier, but speed longer than normal.

Plastic wrap on bike tire makes less work for rider

by June DuVall  
Battalion Reporter  
By covering a bicycle tire with plastic wrap, the amount of

work required by the rider to maintain a certain velocity can be decreased, said Anne Daugherty, a junior aerospace engineering major.

Daugherty, studying under Dr. K.D. Korkan, associate professor of aerospace engineering, tested various wheel covering, or fairings, that would reduce the resistance felt by the cyclist. Up to 60 percent of the resistance encountered in the combination of bicycle and rider could be eliminated with the fairings, which are placed in the wheel and the spoke area.

Daugherty hopes to design an inexpensive product suitable for touring cyclists as well as bicycle racers. Even though it will probably be more profitable for those touring, local racers have expressed interest in riding the bicycle, Daugherty said.

Even though covering the entire wheels with plastic wrap gives the best drag reduction, Daugherty said this isn't the safest procedure because a strong crosswind could easily blow the bike and rider over. Paper circles covering the hub area, or paper cuffs covering the base of spokes along the wheel rim were tested, along with various other fairing designs.

Daugherty said she is at the

critical point now of determining how much of the

ing be covered for success. U.S. District Judge Anne Daugherty and found

reduction and still allow for wind passage for safety. An experienced bicyclist, a 12-speed racing bicycle test track at the Texas A&M University San Antonio research Center under the

ty's supervision to determine the arraignments. The arraignment system to measure velocity readings in a backpack for the rider in a backpack for the ride. Seconds were

measured between each ride to determine how much the ride slowed down.

"When a cyclist is in a race, the distance or trying to maintain a certain velocity can be decreased, said Anne Daugherty, a junior aerospace engineering major.

BANK SHOTS, TRICK SHOTS AND OTHER TABLE MANNERS.

supposed to lose money doing trick shots—just win Lite Beers.

THE COIN TRICK

This one drives people nuts. Place a ball on the head spot. With the chalk, make a circle around it, approximately 8" in diameter. Then put a quarter or half-dollar on top of the ball. (Yes, you can use the same one from before, or you can write home to your parents again.) Place the cue ball behind the foot line and have your friends

I'm gonna teach you a couple things that'll impress your friends, and 2) maybe lose some friends.

All you need is good eyesight, a little dexterity, and three essentials: a pool table, pool cue, and some Lite Beer from Miller.

CHEAP SHOTS

Here's a goodie. I call it the "Cheap Shot." Place a ball on the edge of the corner pocket. Then, take a half-dollar and lean it against the side rail at the other end of the table. (If you don't have a half-dollar, you can always write home to your parents: they'd love to hear from you.)

Tell your friends you're gonna sink the ball in the corner, using the half-dollar as a cue ball. It's not hard. Hit the coin solidly on the edge, just above the center, and it will roll along the rail knocking the ball in the pocket. But don't forget to scoff up the half-dollar. Because you're not

LITE BEER FROM MILLER. EVERYTHING YOU ALWAYS WANTED IN A BEER. AND LESS.

by Steve Mizerak

try to knock the coin out of the circle. Chances are, they won't be able to (this is a good time to work on your Lite Beer and act smug).

When you shoot, do one of two things: hit the object ball head-on with follow-through so the cue ball knocks the coin out, or hit the cue ball very, very slowly so the coin rolls off the object ball.

TABLE MANNERS

Now for simple table etiquette. After you've "hustled" your friends, you gotta keep 'em. So do what I call "Clearing the Table." Simply offer to buy the next round of Lite Beer. They'll all clear the table fast and head for the bar (or to your room or apartment). Then, once they all have Lite (just one apiece—you're not too rich, remember), tell them with Lite in hand and a smirk on your face that your shots were no big deal—you were just showin' off.

Deer Park fights to keep Shamrock from burning PCBs

United Press International  
DEER PARK — Residents of this Houston ship channel community protested a tentative federal decision to allow a second industrial facility — the Diamond Shamrock Corp. — in their area to burn toxic wastes. Citizens said Wednesday they were not abated by assurances from the Environmental Protection Agency that the incineration of PCBs would eliminate —

not create — a health hazard. PCB stands for polychlorinated biphenyl, any of a group of organic compounds used widely in industrial processes but later found to be toxic to the environment. Dr. Marty Allen, an environmental health scientist, said a test burn showed the plant, operating at 1,180 degrees Celsius, destroyed 99.99 percent of the waste PCBs.
