## MARK OF A LEADER

**Caxton's moveable type completely changed English society.**

**By merging computers and telecommunications, Northern Telecom is changing the way the world communicates.**

In 1475, when William Caxton printed the first English book, he started a quiet revolution. A free flow of ideas makes constant change inevitable.

Northern Telecom started its own quiet revolution, one that's also radically changing the way ideas are communicated. We were the first company to design and produce a full line of digital switching systems, the telecommunications technology that transmits both voice and data with digital signals.

Our success convinced many skeptics that digital communications was truly the wave of the future. As private and public digital networks grow, an international web of integrated voice and data communication is gradually being created. Instantaneous access to global data banks is becoming a reality.

Today Northern Telecom is a world leader in digital switching systems, in related technologies — fiber optics, large-scale integrated circuits — and in electronic office systems.

What we've accomplished so far is only the beginning. We're looking for imaginative, talented people to be a part of our growth. If you want a career that combines stability, creativity, and limitless opportunity, we'd like to talk with you.

You can make your mark in the Intelligent Universe.

See your placement office to schedule an interview with our Division Representative from Business Communications/Dallas, on campus November 10th.
